American Railroad Journal.

Saturday, March 27, 1869.

Stock Exchange and Money Market.

Money has been quite active and close, though not particularly stringent, during the week. The banks have not been as liberal of accommodation outside of the line of their own regular customers. Private lenders have been more cautious in making advances, especially on railway and miscellaneous stocks, as collaterals. The large dealers in the public funds have had their wants amply provided for at the legal rate of 7 per cent.; and, in exceptional instances, as low as 5@6 per cent. On stocks, however, the minimum price to even the best houses has been 7 per cent. Some of the dealers have been compelled to pay this figure in coin, or equal to about 10 per cent. in currency. The call for temporary aid has been mainly from the Stock and Gold Exchange operators. In the mercantile line, more inquiry has been noted for money, and with more liberal offerings of business paper, discount rates have been firm at from 8@12 per cent. per annum, on choice to good grades of commercial paper. There has been a growing demand for currency from the west and northwest in preparation for the opening of inland navigation, and the resumption of the forwarding business, chiefly in the way of breadstuffs, large supplies of which have been accumulating at the leading points of the interior, since the close of canal navigation early in December. It is anticipated that this inquiry will be rather urgent for a few weeks, when a return flow of currency to this centre may be looked for. It is not apprehended that we shall have any serious disturbances in the movements of money thereafter, during the spring and summer months. The city banks, last week, added $1,135,249 to their legal tender reserve, $1,112,541 to their deposits, and $1,428,607 to their loan and discount averages. They put out $50,865 more of circulating notes. They lost $2,145,365 of specie, chiefly by the influx of coin into the Sub-Treasury, in the form of customs. They now hold nearly 11½ millions more of gold and legal tender notes than the 25 per cent. of their liabilities in the way of deposits and circulation, required by the provisions of the banking act. The U. S. Sub-Treasury added $5 955,366 to its cash balances, last week, and closed the week with an aggregate reserve of about 93¾ millions, of which about 83 millions were in coin. Our Washington dispatches report the grand total coin reserve of the Treasury Department at about 107 millions, including about 29 millions on deposit to private account, and about 12 millions of currency.

The specie reserve of the city banks is now $15,213,306, against $17,944,308 same time last year. The city bank deposits are now $183,504,999, against $191,191,526 week ending March 21, 1868. The legal tender reserve amounts to $50,774,874, against $52,261,086 same time last year. The circulation now stands at $34,741,310, against $24,212,571 same time last year. The loans are now $263,098,302, against $261,416,900 at this date last year. The Bank Exchanges at the Clearing House through the past week, averaged $121,785,000 a day, against a daily average of $104,862,927 the preceding week, and $121,191,355 the week ending with March 3, 1869. The current week's exchanges average about $137,650,000 a day. The city banks, last week, reported a further loss of $2,145,365 of specie, with a gain of $1,112,541 of deposits, and of $1,135,249 of legal tender notes. They increased their loans, $1,428,607; and their circulation, $50,865.

National Bank notes to the amount of $100,800 were issued last week by the Treasury Department, making the total issue to 1,685 banks thus far, amount to $313,301,730, against $282,555,440 at the close of the fiscal year ending June 30, 1866. From the total issue is to be deducted the currency returned, including worn out notes, amounting to $13,446,890, leaving, with the existing 1,626 banks, (having an aggregate capital of $418,858,931,) an actual circulation at this date, of $299,854,840. The United States bonds held by Treasurer Spinner in trust for National Banks as security for circulating notes amount to $342,690,200; and for the public deposits, $32,716,350—making a total of $375,406,550. The Treasury Department last week redeemed and destroyed $431,921 of worn and mutilated fractional currency, and issued $683,099 of new. The outstanding amount of fractional currency on the 1st of March, 1869, was $36,781,548, against $35,511,127, on Feb. 1, and $34,215,716 on the 1st of January.

The U. S. Sub-Treasury receipts, week ending

with March 20, were $11,821,643, including $2,993,002 from customs duties; payments, $5,366,277, including $380,416 of coin interest; balance at the close of the week, $93,742,441, against $87,787,075, at the close of the preceding week, showing an increase of $5,955,366. The business of the Office during the first two business days of the current week, was as follows: On Monday, receipts, $962,418, including $393,696 from customs; payments, $853,530 including $39,805 of coin interest. On Tuesday, receipts, $1,359,450 including $578,000 from customs and, payments $477,082 including $20,460 of coin interest. The balance at the close of business on Tuesday stood at $94,762,700, against $91,631,258 a week previous; and $83,286,391, on March 3, 1869. The aggregate receipts of the office in February were $31,657,457, including $12,179,726 from customs, aggregate payments, $26,789,619, including $1,923,545 of coin interest.

The outstanding amount of coin certificates on the 1st of March, 1869, was $28,775,560, against $32,659,520 on Feb. 1, and $27,036,020 on the 1st of Jan., 1869. The Sub-Treasurer at this port issued, last week, coin certificates to the amount of $418,600, and retired $2,890,879 through the receipts for customs. The coin certificates issued by the Sub-Treasury office, during February, reached $1,634,240.

Government revenues have been yielding quite respectably, during the week. Secretary Boutwell has expressed himself very well satisfied with the progress made thus far in this year in collecting the revenues especially from excises, and in economizing in the line of expenditures. His gold revenues from customs are so productive that it is deemed probable that he will use portions of the accumulations in the Treasury either to buy U. S. bonds at the market rate, or to anticipate the payment of the interest on the funded debt. With a view to the accomplishment of the latter object, if deemed judicious, a bill has been passed by the U. S. Senate giving power to the Secretary to anticipate the interest claims against the Government, by a period of six months. The excises, last week, yielded about four millions; customs at the port of New York, $2,973,002, and at the outports about $965,000 (in coin) more, making the grand total income for the week equal to abou. $9,145,400 in currency. The total receipts of the National Treasury, from excises, during the fiscal year ending with June 30, 1868, were $191,180,564. The receipts from the same source, thus far in the current fiscal year, commencing with July 1, 1868, have been about 107 millions, according to the latest Washington advices.

The gold market has been remarkably steady again this week in its working, the extreme rates having been 130⅛@131⅛, and the closing quotation on Wednesday 131⅛@138¼. The speculative demand has been active most of the week. The animation in money has been operating against the inflationists of the Gold Board. The reports from Washington, relative to the views of the new Secretary of the Treasury, on the financial issues, and the probability of the Governments becoming an early seller of gold, either directly in the open market, or indirectly by the exchange of gold for bonds on the basis of the market rates, have likewise been embarrassing to the *bull* interests. The customs demand for coin keeps up close to a daily average of half a million dollars. There is, however, no export inquiry of any moment. The exports of specie, last week, were only $181,332, chiefly by the steamer of the 18th inst., to Havana. The New York city banks now hold a specie reserve of 15¼ millions. The Treasury Department controls a specie balance of 107 millions.

The Gold Exchange Bank clearances on Wednesday, were $107,245,000, and the resulting balances $4,830,473 in coin, and $6,692,531 in currency.

The average amounts of the Gold Exchange Bank loans and discounts last week was $1,807,796, average amount of specie $564,457, average amount of deposits $1,127,933.

The customs demand for Gold last week, averaged $498,833 a day; thus far, this week, it has averaged $485,848 a day, or equal to a weekly aggregate of $2,915,088. The arrivals of specie from Europe, Havana and other foreign ports, during the week were $175,390, and since Jan. 1, $2,411,767 against $1,129,828 same time in 1868. The receipts from California, last week, were none. The total customs revenue of the Government, in coin, at this port, from July 1, 1868, to date was $90,729,931, against $81,124,248 same time in the preceding fiscal year. At San Francisco, from Jan. 1, to Feb., 27th 1869, $1,062,192, against $1,195,059 same time last year.

The total receipts of California gold at this port, since July 1, 1868, have been $16,122,166, against $23,573,010 same time in fiscal year 1867–'68, showing a decrease in the current fiscal year, of $7,450,844. The exports of specie, from this port, last week, were $181,332, against $275,502 same week last year; total, since July 1, 1868, $29,177,865, against $41,681,748 in 1867–'68. Government disbursed last week through the U. S. Sub-Treasury here, on account of the coin interest on the public debt $380,416; since July 1, 1868, $66,529,793, against $54,119,606 same time in 1867–'68. The specie exports from San Francisco, from Jan. 1, to March 2, 1869, were $6,875,729, against $5,470,869 same time in 1868.

There has been a very full offering of foreign exchange, during the week, and the market has been depressed throughout, much below the specie shipping point. Foreign buyers of U. S. bonds for export have experienced much difficulty in marketing the exchange made against their purchases, unless at very low rates. On Monday and Tuesday, some disposition was manifested to purchase bond drafts on speculative account, at the going figures, which tended to strengthen the market. Bankers' prime sixty day bills on London closed on Wednesday at 108⅛@108½, and on Paris to 5.23¾@5.18¾; sight bills on London to 108⅝@109, and on Paris to 5.18¾c. @5.17½. The offering of produce bills has been only to a moderate average this week. The week's exports of domestic produce and miscellaneous goods from this port have been to the currency value of $2,440,120, against $1,946 378 same week last year; total, since July 1, 1868, $116,749,923, against $130,748,206 same time in preceding fiscal year of 1867–'68.

Owing to the difficulties experienced in marketing foreign exchange, there has been only a limited inquiry for the earlier issues of Government securities, such as the six per cents of 1881, the 5-20s of 1862, and the May and November coupon Five-Twenties of 1865, which are now called in the street the exportable issues, though the 1867 Five-Twenties have been gaining rapidly in favor with export purchasers, since the enactment of the Public Credit bill on the 18th inst. The home demand has also been on a restricted scale. Though the offerings of bonds have not been extensive, prices have yielded ¾@1¾ per cent. during the week, depressed, in part, by the adverse influence of the activity in money. The large dealers have not been buying very freely, and are not likely to purchase largely until the Money Market shall have assumed a steadier temper and tendency. The market closed firmly on Wednesday at the quotations given herewith on quite limited offerings of bonds.

U. S. sixes of 1881 closed here on Wednesday at 116⅛@116¼; U. S. Five-twenties of 1862, 118⅛@118¾; U. S. Five twenties of 1864 at 114¼@114½; U. S. Five-twenties of 1865 at 116½@116⅝; U. S. Five-twenties of 1865, consolidated, 113⅛@113⅜; U. S. Five-twenties of 1867, 113¼@113⅜; U. S. Five-twenties of 1868, 113¼@113½; U. S. Ten-forties at 105@105¼; U. S. Six per cent. currency bonds, 103¾@104.

The latest quotations at the London Stock Exchange compare as follows with former returns:

	Mar. 10.	Mar. 17.	Mar. 24.
Consols	92⅞	93⅛	93⅛
U.S. 5-20's of 1862	82⅛	83½	83⅝
Erie	24¼	24¾	24½
Ill. Central	97	96¾	97

Railway and miscellaneous share property has been decidedly most active, having been the feature of the board and street dealings, through the week. Prices have been notably firmer for the street favorites, particularly for the New York Central shares, which have advanced sharply, Pacific Mail has been quite feverish and variable. The general market closed on Wednesday briskly and on the whole buoyantly.

There has been a moderate inquiry for most kinds of Produce, since our last; but, as a rule, the tendency of prices, particularly of Cotton, Breadstuffs, and Provisions, has been in favor of buyers. There is a notable want of consistency between the Liverpool and New York Cotton market, which keeps a very large stock here, under heavy money advances at extra charges for Interest, Brokerages and Storage. Middling upland cotton closed tamely on Wednesday at 28½ cts. per lb. The stock of cotton now here is estimated at about 124,000 bales. The receipts at the port this week, have averaged about 2,500 bales a day. The receipts at all the ports, since Sept. 1, 1868, have been 1,847,000 bales, against 1,842,000 bales same time in 1867–'8; exports, same time 924,000 bales, against 1,195,000 bales same time in 1867–'8; stock on hand at latest dates, 890,000 bales, against 832,500 bales same date 1868. Total crops of 1867–'8, 2,430,893 bales; total receipts at ports year ending Sept. 1, 1868, 2,240,282 bales; total exports thence, same time, 1,657,015 bales. The exports of domestic cotton goods from this port, since Jan. 1, have been 6,085 pkgs., against 2,650 pkgs., same time last year. From Boston, 8,023 pkgs., against 2,284 pkgs. same time in 1868. Tobacco has been more sought after, as have been likewise Petroleum and Naval stores. Wool has been

quiet but steady. Fish have been in light demand and declining. Hay, Hops and Seeds have been inactive. At the Live Stock markets, this week, Beeves have been in fair demand at from 11@17½c., per lb.; week's receipts, 5,538. Milch cows at from $40@$125, each, receipts, 79. Veal calves at from 10@13c. per lb.; receipts, 825. Sheep and lambs at from 6½@9½c., per lb.; receipts, 18,802. Swine at from 10¾@11⅜c. per lb.,; receipts, 11,543. A fair business has been noted in foreign goods. Sugars have been particularly active and have advanced again. Seasonable syles of dry goods have been held firmly. The total imports of foreign dry goods, last week, were $2,619,046, and the total amount marketed $2,934,744. The value of foreign merchandise imported last week, was $3,627,361—making the grand total specie value of last week's imports of dry goods and merchandise, equal to $6,426,407, against $7,576,117 same week last year; total since July 1, 1868, $187,295,711, against $167,338,980 in 1867–'8. There has been more doing in the freight line, and rates close with more firmness. For Liverpool we quote flour at 1s. 3d. @1s. 6d. by sail, and 1s. 6d.@1s. 9d. by steamer, per bbl.; grain at 8@8½d. by sail, and 4d.@4½d. by steamer, per bushel; cotton at¼d. by sail, and ¼d.@⅜ by steamer, per lb.; and heavy goods 12s. 6d.@22s. 6d. by sail, and 15s.@30s. by steamer, per ton. Total number of vessels in port on Wednesday, 452.

The imports for the week ending March 20, and since the beginning of the year, have been as follows:

	1868.	1869.
Dry goods	$1,568,530	$2,619,046
Gen. merchandise	6,007,587	3,627,361
Total for the week	$7,576,117	$6,246,407
Previously reported	42,753,908	65,635,909
Since January 1	$50,330,025	$61,182,316

The New York exports, exclusive of specie, for the week ending Mar. 23, and since the beginning of the year, compare as follows:

	1868.	1869.
For the week	$1,946,378	$2,440,120
Prev. reported	36,520,120	31,577,637
Since January 1	$38,466,498	$34,017,757

The balance in the Sub-Treasury on Wednesday was $95,105,928 31.

The following quotations of sales of Railway and other securities are in addition to those given elsewhere in our columns:—

New York.—Toledo, Wabash and Western consol. bonds, 81; Long Dock bonds, 92½; New Jersey Central 1st mort., 99; Mississippi Central 1st mort., 72; Rome, Watertown and Ogdensburg R. R., 111⅛; Hartford and New Haven R. R., 202; Norwich and Worcester, 100; Dubuque and Sioux City R. R., 118; Long Island R. R., 46⅛; Erie, 33⅝@35⅞; Montgomery and West Point R. ☞ THE FIRST MORTGAGE BONDS of the Rockford, Rock Island and St. Louis Railroad Company, pay both the Principal and Seven per Cent. Interest—1st Feb. and 1st Aug.—in GOLD COIN, Free of Government Tax.

A limited amount only of these Bonds may be had at par and accrued interest in currency, of H. H. BOODY, Treasurer, 12 Wall street, or of HENRY CLEWS & CO., Bankers, 32 Wall street.

☞ Levi P. Lincoln, Esq., has been appointed Superintendent of the Portland and Kennebec Railroad.

☞ About 8½ miles of the Monongahela Valley Railroad have been surveyed. Sigismond Loew, Esq., is Chief Engineer.

From Herapath's Railway Journal.

Railway Economy.—Permanent Way.

We pointed out in our last article that an undoubted advantage is realised by supporting the rail continuously on the sleeper instead of at intervals, not only because by so doing we obtain a stronger road for the same or less cost, but also that a greater surface is provided on the sleepers for the rails to rest upon, which obviates the premature destruction of the sleepers caused by crushing when the points of support are insufficient, as is the case when chairs are interposed, and which is more apparent when the traffic is heavy and the speed great. It would therefore appear that, considered simply as a mechanical structure, a longitudinal system of permanent way has many advantages over one constructed with cross sleepers. This latter system, however, possesses one advantage over the other in affording greater facilities for drainage, and this is a point that no engineer will neglect who wishes to maintain his permanent way in perfect order, but it is one of those points upon which it is impossible to generalise, as the provisions to be made for it depend entirely on local circumstances and the geological formation through which the line passes, but even should circumstances render it expedient for the more perfect drainage of the ballast to use cross sleepers, the foot rail without chairs would still possess an advantage over the double-headed rail with chairs; and it is very probable that such a course of reasoning as has been propounded has led to the adoption of this system in many recent instances.

Having therefore determined certain fixed principles as a guide generally to the mechanical construction of the permanent way, we arrive at that most important point, viz., of what material to make the rail.

Ten or a dozen years ago we should have had no choice in the matter. Wrought iron was then the only suitable material obtainable, but now steel rails of good quality are to be had at not very much above the price that has sometimes been paid for iron. The point, however, to determine is, which is the more economical, a steel rail at £12 per ton or an iron rail at £8? This will depend greatly on the amount of traffic to be carried, and what consequently will be the ultimate durability of the rails, for besides the first cost of the steel rail being 50 per cent. more than that of the iron, there is also the interest on this additional 50 per cent. of capital to be taken into account on one side, and the interest on the capital required for renewals on the other, and we must know upon how many years this interest is to be estimated, as well as the relative durability of the two rails, before we can form an exact comparison between the two. We have also to credit each with the value of the worn out rails. The average life of Bessemer steel rails may, we should say, be fairly estimated from two to three times that of the iron of good quality; and supposing that a line is laid with steel rails which lasts say nine years, at a cost for the rails of £1,500 per mile the same line laid with iron rails would have to be renewed say three times at a cost of £8,000. In the account with the steel rails at the end of the nine years we should have on the debtor side say simple interest at 5 per cent.—£675, which, added to the capital of £1,500, makes £2,175, less the value of the old rails, say half price, £750, making £1,425 expended in steel rails for nine years. In the account with iron rails at the end of nine years we should have expended as follows:—First capital invested £1,000; at the end of three years' credit old rails sold at half price, £500 less three years' interest on capital of £1,000 at 5 per cent. £150, leaves £350, to which add £650 to make up the £1,000 for the purchase of new rails for another three years, at the end of which time sell old rails again for £500, from which deduct interest on £1,000+£650 for three years £247 10s. leaves £252 10s., to which add £747 10s. to make another £1,000 to purchase the rails for the remaining three years, at the end of which time sell old rails again for £500, against which debit interest for three years on £1,000+£650+£747 10s., amounting to £359 12s. 6d., which leaves £140 7s. 6d. to credit. We shall thus have expended as capital at the end of the nine years £1,000+£650+£747 10s., altogether £2,397 10s., the interest on which has been paid in account, from which we have to deduct the balance remaining from sale of old rails of £140 7s. 6d., leaving a net capital sum expended of £2,257 2s. 6d. in iron rails for nine years, the difference in favor of steel being £2,257 2s. 6d.—£1,425= £832 2s. 6d. This is on the assumption that the steel rails last three times as long as iron rails. We will now take a case in which they only last twice as long, say five years for the iron and ten years for the steel rails.

Taking first the account with the steel rails as before, we have first the capital of £1,500, the interest on which for ten years at 5 per cent. £750 will just be met by sale of old rails, leaving the amount expended in steel rails for the ten years £1,500.

In the account with the iron rails we have for the first five years capital £1,000, at the end of which time credit old rails for £500, less five years' interest on capital of £1,000 at 5 per cent. £250, leaves £250, to which add £750 to make up the £1,000 to purchase new rails for remaining five years, at the end of which time sell old rails for £500, from which deduct interest five years on £1,000+£750 amounting to £434 10s., which leaves £62 10s. to credit. We shall thus have expended as capital at the end of the ten years £1,000+£750, altogether £1,750, the interest on which has been paid in account, and we have a balance from the sale of old rails of £62 10s., which deducted from £1,750 leaves £1,687 10s., the net capital sum expended on iron rails for ten years, and this put against the cost of the steel rails for the same time shows a balance in favor of the steel rails of £1,687 10s.—£1,500, equal to £187 10s., notwithstanding we have in this case only estimated the duration of the steel as double that of the iron rails; we have supposed the interest to be paid in each case out of the traffic receipts of the line, and only dealt with it as an actual money value; there would also be a further saving in favor of the steel rails on account of the additional expense of taking out and putting in the iron rails, which ought to be allowed, but we do not put this forward as an exact estimate, but a rough approximate calculation, in order to show that to arrive at a correct estimate of the ultimate economy of using steel in the place of iron rails various circumstances have to be taken into account, and that the actual saving over iron rails will not always bear the same relative proportion to the increased durability taken with reference to the first cost of the rails respectively; there can be no doubt, however, that there must be a saving, and it is further evident from the above investigation that the saving will be greatest when the traffic is heavy, and the wear and tear most. With respect to the actual life of a rail, so many causes come into operation which affect its existence, that its ultimate duration is most difficult to predict with any accuracy. It is not only the number but also the weight of the trains which pass over it in a given time, and it is not only the gross weight, but the way that weight is distributed on the wheels, and then again this is modified by the speed. On the Great Northern, about 60,000 trains, weighing altogether 12,500,000 tons, which passed over iron rails, destroyed them in three years, whereas on the Lancashire and Yorkshire Railway 62,000 trains, with a gross tonnage of about 12,450,000, only wore out the best rails in 7¼ years, and in another part of the line, where the trains draw up, it took 208,000 trains and nearly 39,000,000 tons to wear out the rails in 7¼ years. The greater rapidity with which the rails on the Great Northern were destroyed could not therefore be due alone to the number or weight of the trains; it must have been either to the greater speed or some other cause, such as greater weight on the wheels, or perhaps, to an inferior quality of rail. It therefore becomes a most difficult matter to determine how long a rail will last unless its own constitution and all the circumstances of its future life are known beforehand, but of this we may be sure, that great weights accumulated on small surfaces, as in the case of the driving wheels of engines, together with excessive speeds, do more to destroy the rails of the permanent way than double the amount of heavy traffic with a moderate speed and the weight properly distributed; if, however, the rail is fairly adjusted to its work, and subjected only to fair wear and tear, there is no reason why the life of a rail should not be as accurately ascertained as the mileage of a tyre or the duration of an axle bearing; steel is the material we shall eventually have to look to for rails which have to support heavy traffic, and the sooner it is cheapened and improved the better for the railway interest. There is one point in reference to the use of this material to which we wish to direct the attention of railway engineers, and which we are somewhat surprised has not, so far as we know, received it before. We allude to the advantageous effect produced by tempering in oil. This process has long been in use most successfully for the steel inner tubes of ordnance; it was introduced many years ago by Mr. Anderson in the Royal Arsenal. The experiment was a bold one, for although previously it was a common practice to treat small articles of refined steel, such as saws, springs, &c., in this manner to give them hardness and elasticity, no one ever contemplated increasing the *strength* and *toughness* of the material in *large masses* thereby, and it showed an intimate knowledge of the peculiar property of the new material, this mild steel, or as some call it homogeneous metal, to foresee in this process the great advantage resulting therefrom; but that the effect is great is now established beyond question, for it has been ascertained by repeated experiments that the ultimate strength of mild steel is by this treatment increased 25 per cent., while its safe working strength is nearly doubled. If such is the case with gun tubes why should it not be so with rails? and why should not this be taken advantage of for fishing plates? for these necessary adjuncts to the permanent way being confined in size by the channels in the rails, it is of importance to make up for this and contribute to their strength in every way possible. No doubt some difficulties stand in the way of carrying out the process in the possible warping of the rails, but a gain of 25 per cent. in strength, for scarcely any cost, is worth something, and should be a strong inducement towards finding a way to surmount them.

These, and the other points we have discussed, may, we hope, lead to a more careful consideration of the subject by those within whose province the subject of permanent way more immediately comes. The cost of maintenance is a serious item of railway expenditure, and this expenditure is necessitated by the permanent way not being what its name implies; but if it cannot be made actually permanent, no effort should be spared to make it as nearly so as possible.

Portland and Franklin Railroad.

A meeting of the friends of this road was held in Upper Gilmanton, N. H., on the 20th inst. Large delegations were present from all the towns along the proposed route of the road. The meeting was organized by the choice of Hon. Austin F. Pike, of Franklin, as President, and Wm. M. Leonard, of Upper Gilmanton, as Secretary. Remarks in favor of immediately organizing the company under the charter granted by the last Legislature of New Hampshire were made; and a committee chosen to report as soon as possible the time and place for a meeting to permanently organize the company. This road commences at Downing's Crossing on the Cocheco road and runs through the towns of Alton, New Durham, Barnstead, Gilmanton, Upper Gilmanton and Sanborton to Franklin where it intersects with the Northern road, and is intended as a connecting

link between the Portland and Rochester and Northern Railroad thus making a great through line to the West.

Journal of Railroad Law.

COMMON CARRIERS—WHEN DELIVERY TO SERVANT BINDING UPON COMPANY—PRIVATE INSTRUCTIONS—PRINTED RULES OF COMPANY NOT ALWAYS BINDING.

The facts in the late case of Winter *vs.* Pacific Railroad Co., (41 Mo., 503) are clearly stated in the following able opinion by

WAGNER, J.—Plaintiff brought this action in the court below against the defendant, as a common carrier, for the value of a piece of carpeting, alleged to have been delivered to the defendant for transportation from St. Louis to Kansas City, and by the defendant lost. The defendant denied that the carpeting was ever delivered to it, and on this fact the issue was joined. The facts appear to be that, on or about the 20th of October, 1865, plaintiff came to defendant's passenger depot at St. Louis, Missouri, having with him a trunk and the piece of carpeting in controversy; that, having purchased a ticket to his destination in Kansas City, he demanded of the defendant's agent for receiving and checking baggage at the depot a check for the trunk, which was given, and at the same time asked for a check for his carpeting, when the agent told him that "it was unnecessary" that "he would strap it on the trunk; one check would do for both; it would go safely." Plaintiff then delivered the same to the baggage agent, who took it into his charge and custody, but it was lost in the course of the transit and never returned to plaintiff.

The trunk went safely and was duly delivered. The defendant resisted a recovery exclusively on the ground that the agent had no authority to receive the carpeting to be carried by the passenger train, and that it should have been taken as freight to another and distinct depot and carried on another train. It also introduced in evidence its instructions to baggage men, by which they were prohibited to check or receive any articles of freight or merchandise on passenger trains. On the above facts the court gave judgment for the plaintiff.

A delivery to a servant or duly authorized agent of a common carrier, who is in the habit of receiving packages, is unquestionably to be considered a sufficient delivery. Ang. on Car. § 146. But to make the common carrier responsible as such, the delivery must be made to a servant who is instructed to receive the goods and not a person engaged in other duties. Aug. § 129.

In Blanchard *vs.* Isaacs 3 Barb. 388, a coat was delivered to the driver of a stage coach by a person not a passenger, to be delivered to another in a different place, but nothing was paid for the transportation of the coat, and the driver refused to put it on the way-bill, saying that he had no right to do so; and there was no proof that the coat ever came to the possession of the proprietor of the stage or any of his agents; it was held that there was no delivery of the coat to the proprietor, and that he was not responsible as a common carrier for the loss. The driver of the stage coach had no authority to receive the coat, and he distinctly informed the owner of the fact. It was not put upon the way-bill nor was it taken as baggage, because the person to whom it belonged was not a passenger. Under the circumstances the proprietor was clearly not liable, and the owner knowingly sent the coat at his own risk. When there is no special contract, a common carrier is only bound to carry the passenger, with such baggage as the traveler usually carries, comprising clothing and such articles as are generally taken along for personal convenience. Aug. on Car. § 115; Sto. on Bail. § 499.

But if the traveler takes with him other articles, which do not come strictly within the denomination of baggage and exposes them to view, so that no concealment is practised, and the carrier chooses to treat them as personal baggage and carries them accordingly, and a loss occurs, he will be responsible therefor—Great Northern Rail Co. *vs.* Shepherd Eng. Rail Cas. 310.

Will the fact that the company instructed the baggage master not to receive or check any article of merchandise on the passenger train exonerate them from liability? It is not pretended that the plaintiff had any notice of such instruction, or that the agent was not acting within the general line of his duty. The general rule is that "if a servant is acting in the execution of his master's order, and by his negligence cause injury to a third party, the master will be responsible, although the servant's act was not necessary for the proper performance of his duty to his master, or was even contrary to his master's order." Smith on Mast. & Serv. 157. And so Story lays down the law, that the acts of the agent bind the principal in all cases where the agent is acting within the scope of his usual employment, or is held out to the public, or to the other party, as having competent authority, although in fact he has, in the particular instance, exceeding or violating his instructions, and acted without authority (Sto. on Ag. § 443), and by the application of these elementary rules to railroad companies, it has been held to make no difference in regard to the liability of the company for the act of the servant, while acting in due course of his emplement, that he did not follow their instructions either general or special—Derby *vs.* Plil. and Read. R. R., 14 How. (U. S.) 468.

Now, the right of the plaintiff to recover here, is because the carpeting was placed in charge of the baggage master to be transported to Kansas City. The company had intrusted to their agent authority to receive and check baggage, and have also given him power to determine what property came within that class, or description of property. The agent, in the usual and ostensible scope of his employment, received the carpeting without hesitation, and said that one check would answer for both the carpeting and the trunk; that he would strap them together and they would go safe. This was a complete reception by and delivery to the company. The plaintiff was not apprised or notified that it was any law or regulation of the company for the article to be carried on the train on which he took passage; the person authorized and appointed for that purpose received it willingly, and any private order or instruction given by the company to its agents as to what articles should be received and checked for, could not exonerate it from liability or impair the rights of the plaintiff. The disobeying of orders on the part of the servant cannot be allowed to work an injury to innocent third persons.

Judgment affirmed. The other judges concur.

Pittsburg, Ft. Wayne & Chicago Railway.

The seventh annual meeting of the stockholders of this company was held in Pittsburg on the 17th inst., J. S. Craft, Esq., in the Chair. The report o the President which was read by the Secretary, F. M. Hutchinson, Esq., was unanimously adopted and ordered to be printed.

W. L. Hickox, of Mansfield, Ohio, offered the following, which was unanimously agreed to:

Resolved, That an issue of bonds, to be denominated "Equipment Bonds," bearing interest at the rate of eight per cent. (free of Government tax) per annum, and to be payable at such time or times as the Board of Directors may deem advisable, and amounting in the aggregate to one million of dollars, including $500,000 heretofore authorized by the Board of Directors, be and the same is hereby authorized, consented to and recommended to the Board of Directors.

John L. Larwell, Esq., of Wooster Ohio, offered the following, which was unanimously adopted:

Resolved, That the acceptance by the Board of Directors of the amendment by the Legislature of Pennsylvania to the charter of the company authorizing a classification of the Board be approved, and their action under it, and also that the acceptance by the Board of Directors of the act of the Legislature of Pennsylvania "Relating to railroad companies and common carriers, defining their liabilities, and authorizing them to provide means of indemnity against loss of life and personal injury," approved April 4th, 1868, be approved.

Mr. Wm. Dill, of Allegheny, offered the following:

Resolved, That when this meeting adjourn it will adjourn to meet at such time and place as may hereafter be designated by the President, on notice of ten days, to be published in the usual manner.

A motion was then adopted to proceed to the election of three Directors to fill the vacancy in the Board. The President nominated William Thaw, Esq., of Pittsburg, and John M. Wilt, of Fort Wayne, Indiana, as Inspectors to conduct the election, which were approved.

The election was then proceeded with under the provisions of the law passed by the present Legislature, and the result was announced as follows: *For four years*—Messrs. Wm. B. Ogden, Jesse L. Williams, L. H. Meyer. *To the vacancy for two years*—John Sherman.

The Board consists of the following members: George W. Cass, Pittsburg, Pa.; Springer Harbaugh, Pittsburg, Pa.; J. Edgar Thomson, Philadelphia, Pa.; Jno. L. Dawson, New Geneva, Fayette County, Pa.; J. F. D. Lanier, New York; Louis H. Meyer, New York; Samuel J. Tilden, New York; Pliny Hoagland, Fort Wayne, Indiana; Kent Jarvis, Massillon, Ohio; R. R. Springer, Cincinnati, Ohio; Hon. John Sherman, Mansfield, Ohio; W. B. Ogden, Chicago, Illinois.

Hoosac Tunnel.

By the Report of the Commissioners of the Troy and Greenfield Railroad and Hoosac Tunnel, submitted to the Massachusetts Legislature on the 28d inst., it appears that up to Feb. 1, the total length of the tunnel bored was 9,338 feet, leaving to be bored 15,693 feet. The length of the east end heading is now 5,282 feet; of the east end enlargement 2,500 feet; of the west end heading 4,056 feet; of the brick arch 931 feet, of the whole length of the central shaft, (1,030 feet) 583 feet have been finished, leaving 447 feet to be completed.

Railroad from Northampton to Sudbury.

The Legislature of Massachusetts have been petitioned to grant a charter to Edward Denny and others, to construct a railroad from Northampton to Sudbury, and to pass over the Wayland and Sudbury Railroad. The route of the road as proposed is substantially as follows: Starting at Northampton it passes through South Hadley, Granby, Belchertown, down to near the junction of the three rivers in Chicopee, near Palmer, thence through Ware, up the Ware River Valley in a northeasterly direction, passing through Hardwick, Barre, Oakham, Rutland, Holden, West Boylston, Sterling Junction, and down through Boylston, Clinton, Berlin, Bolton and Hudson to Sudbury, where the Sudbury and Wayland road, chartered by the Legislature last year, is to be passed over, and Boston entered by means of the Fitchburg and Boston road. The route is twenty miles shorter than any other at present, making the distance from Northampton to Boston 95 miles. It was stated that it is to pass through a portion of the State which is wanting in railroad communications, and, in addition, is the beginning of a great trunk line of communication with the West. There is now a railroad from Northampton west to Williamsburg, and a chartered road from the latter place to North Adams, and direct connection thence with Troy. There appeared no opposition to the road, and it is stated that many of the towns through which it passes are willing to subscribe for stock in the road. The charter which is proposed will make the capital stock not less than $3,000,000, nor more than $5,000,000, and the road must be located in three years and constructed in five.

Railroads in Iowa.

The Des Moines *State Register* publishes a statistical article showing the total amount of lands granted the railroads of Iowa, and their gross earnings for 1868. The data are up to January 1, as regards the number of miles built and the number of acres granted. The Burlington and Missouri River road at that time had 181¼ miles finished; had received 287,097,034 acres of land. Its gross earnings for 1868, were $841,653 27. The Chicago, Rock Island and Pacific road had 276⅛ miles completed; had received 47,467,436 acres of land; its gross earnings for 1868, were $1,051,828 84. The Chicago and Northwestern road had 385 miles built; had received 701,545,419 acres of land; the earnings for 1868, were $3,371,682 28. The Dubuque and Sioux City road had 143 miles built; had received 12,265,822 acres of land; its earnings for 1868, were $9,707,692 52. The McGregor and Sioux City road had 85 miles built; had received 372,800 acres of land; earnings $498,235 05. The Des Moines Valley road had 162 miles built; had received 46,402,347 acres of land; earnings, $710,240 94. Of the St. Paul and Sioux City there is no portion in Iowa yet built; it has received 500,000 acres of land. The Sioux City and Pacific road had 75 miles built, with a large land grant, all in Nebraska; earnings, $127,000 02. The Council Bluffs and St. Joseph road had 52 miles; no land grant; earnings, $153,854 93. The Cedar Falls and Minnesota road had 42 miles; no land grant; earnings, $55,465 67. The Dubuque and Southwestern had 25 miles built; no report of earnings.

Southern Maryland Railroad.

The preliminary surveys of the route of this proposed road have been finished. The contemplated cost of the road is $1,200,000, and the act of incorporation passed by the Maryland Legislature, provided that the work should only be begun when one million dollars worth of stock had been subscribed for. Though that amount has not yet been subscribed, enough has been guaranteed to authorize a commencement, in consequence of which the Legislature will be asked to allow the work to proceed with the funds already accumulated. Of the amounts required to build and equip the road, $350,000 has been subscribed by the State of Maryland; $500,000 is expected from Washington, D. C., and $300,000 in individual subscriptions from farmers along the route of the road, in addition to a free gift of the right of way and cross ties. The length of the road will be seventy-eight miles, extending from Point Lookout, in St. Mary's County, Maryland, through St. Mary's, Charles and Prince George's Counties to Washington City, crossing the Eastern Branch at or near Benning's Bridge, and entering the city *via* Maryland Avenue. It will cross the Potomac Railroad at Brandywine, in Prince George's Co., seventeen miles from Washington City. The Alexandria *Gazette* says that the friends of the road are sanguine in their expectation that in a few years there will be a harbor built at Point Lookout, so that coal can be taken in the winter time over the road and shipped from there, it being in contemplation to form a connection with the Alexandria, Loudoun and Hampshire Railroad. Coal can be carried over the Southern Maryland Railroad from Point Lookout to Washington City all winter without hindrance from stress of weather, as no ice ever forms at the Point. The President of the road is J. T. Durant, Esq.; directors, Messrs. Chapman, Morgan, Hutchins and Boland; Chief Engineer, Benjamin Tippett.

☞ The Albany *Argus* says that subscriptions are being taken in that city to the capital stock of a company that proposes to build a railroad from Albany, westward, the ultimate object being to secure the completion, by the localities interested, of a series of railroads forming a continuous line to the West. It is contemplated to build the road on the west side of the Mohawk River. Prominent gentlemen in Albany are interested in and promoting the movement, and it is said Eastern capitalists are actively engaged.

☞ The citizens of Wayne County, Kentucky, recently held a meeting in Monticello, and approved of the construction of the proposed line of road from Burnside's Point, on the Cumberland River, to intersect the McMinnville and Tennessee Railroad at or near the State line, and resolved to vote the sum of $200,000 toward the construction of said branch road.

☞ A dispatch from Fort Wayne, Ind., says the action of the Michigan Legislature in continuing the land grants of the Grand Rapids and Indiana Railroad secure to that company the use of $2,000,000 from Eastern capitalists for the completion of the road. It is understood they will commence work on the Fort Wayne end of the road immediately, and continue it as rapidly as possible.

☞ On the 4th inst., articles of association were filed in the office of the Secretary of State, for the construction of a railroad from Binghamton, along the line of the Susquehanna river, to the Pennsylvania State Line. The road is to be 15 miles long, and the capital stock of the company is $500,000. It will make connections with the tracks and depots of the Erie, Syracuse and Binghamton, and Albany and Susquehanna railroads.

☞ The receipts of the Monongahela Navigation Co., for the year ending December 31, 1868, from coal, freight, passengers and tonnage tax, were $176,790 34—an increase over the previous year of $42,904 45. Number of passengers carried, 99,634. Pounds of coal and slack shipped, 45,301,000.

☞ Thomas Dodamead, Esq., having tendered his resignation as President of the Richmond and York River Railroad Company, the board of directors have unanimously elected A. S. Buford, Esq., to fill the vacancy. Mr. Buford is President of the Richmond and Danville Railroad Company.

☞ A contract has been closed by which the Alexandria, Loudoun and Hampshire Railroad is to be completed to Winchester this year, and a new board of directors has been elected. Lewis McKenzie, President, and Oakes Ames, of Massachusetts, H. D. Cooke, of Washington, and S. McComb, of Delaware, are the new directors. Branches of the road are to be built to Washington.

☞ The Cleveland and Toledo and the Lake Shore (formerly the Cleveland, Painesville and Ashtabula) have completed their consolidation; a ten per cent. dividend, in the form of a thirty years' seven per cent. bond, has also been declared on the consolidated stock.

☞ The survey of the Ponaganset Railroad, to run from Hope Village to Danielsonville, Connecticut, is completed, the route is reported feasible, and there is good reason to expect that the road will be built.

☞ A special despatch from Des Moines, Iowa, says $5,000,000 of first mortgage bonds of the Iowa and State Line Railroad Company will soon be issued by that company, with J. Edgar Thomson, of the Pennsylvania Railroad, as Trustee.

☞ The Pensacola and Georgia Railroad and the Tallahassee Railroad were sold at public auction on the 20th inst. The first was knocked down at $1,220,000, and the last named at $195,000, to F. Dibble and associates—$60,000 to be paid on taking possession and the balance as called for by the Trustees of the internal improvement fund.

☞ The extension of the Attica Branch Railroad is proposed to run from Batavia and join the New York Central either at Lockport, Medina or Albion. This branch is intended to reach the valuable gypsum deposits in the vicinity of Oal-field, Genesee County.

☞ The stockholders of the Dubuque and Sioux City Railroad have unanimously confirmed the lease of said road to the Illinois Central Railroad Company.

☞ A Nashville correspondent of the Louisville *Courier-Journal* says that Gen. Forest and Major Merriwether have purchased the Selma and Marion Railroad, and that the iron of the Newborn road has been turned over to them—giving 30 miles of track now in running order, and iron for 12 miles more to begin the great Selma and Memphis road.

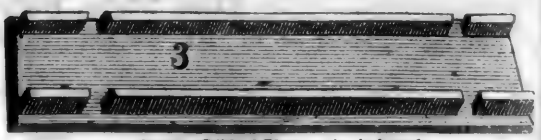
THE PHŒNIX IRON COMPANY'S



NEW SUSPENSION RAIL JOINT.

Cross Section of Rail Joint.

Side Clamps 14 in. long, showing Rail Stop.

Bottom Ribbed Plate, 14 in. in length.

The above diagrams show the general design of this new ***Suspension Rail Joint,*** which, after long and successful trial on the Philadelphia, Wilmington and Baltimore, and other Railways, is now offered to Railway Companies. The cut on the left gives a cross section of the finished joint, showing the rail (*1*) resting upon the ribs of the bottom plate (*3,*) with the flanges of the rail and the bottom plate embraced by the side clamps (*2,*) and held firmly in place by bolts (*4.*) In screwing up these bolts, the bite or grip between the bevel on the side clamps corresponding with the bevel on the flanges of the rail, insures great vertical and lateral rigidity to the joint.

Several careful tests have proved that the deflection of two pieces of rail thus fastened at the joints and subjected to a transverse strain between supports five feet two inches apart, was but a trifle more than that of the same rail uncut, tested in the same way. The value of the joint in this respect was 85 per cent. of that of the solid rail, while the best fish joints, similarly tried, gave less than 50 per cent.

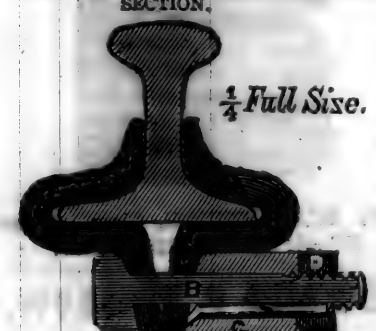
No holes are required to be punched through the neck of the rail, nor slots in the flanges, only a quarter circle notch of about half an inch radius is necessary to be cut out of the corner of one of the flanges of the rail to fit the "stop" shown in the upper right hand cut. This is a very important consideration, as holes punched or drilled in the neck are apt to split the rail longitudinally, and in *Steel Rails particularly,* is the principal cause of breakage.

All that portion of the joint, shown in the cut of cross section, below the bottom of the rail, bears endwise against the cross-ties, and prevents any creeping of the track. It makes a very firm joint, does not get out of order, and can be fitted to any size of rail. When ordering, send a sample piece of rail two feet long. Address,

PHŒNIX IRON COMPANY, Philadelphia, Pa.

Scott's Wrought Iron Clamp Truss Joint

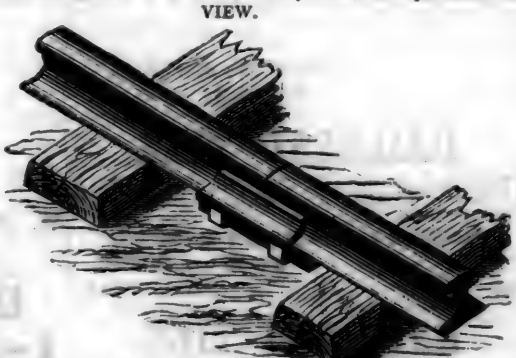
FOR RAILROAD RAILS.



LENGTH 9 TO 12 INCHES, WEIGHT 20 TO 30 LBS.

THICKNESS ⅝ OF AN INCH. COST FROM $1.30 TO $1.50.

Has been tested to ***24,000*** lbs., between 24 inch bearings, (a 40 ton engine will not test it more than 10,000 lbs.) it is a ***TRUSS,*** supporting fully the ends of rails while suspended itself. This principle gives it a power that no chair has. Forty per cent. of rails now destroyed, will be saved by its use.



It is ***SIMPLE,*** can be put on broken or sound rails at once; will not stir from its position, and requires no renewal.

SECTION.

¼ Full Size.

VIEW.

VIEW AND SECTION show position in place. A.—Is CLAMP-TRUSS. B.—Are two ¾ inch Bolts. C.—An Iron Collar, (a prepared wood block can be used in its place if parties prefer it.) D.—Is the Nut. S.—The LOCK of the NUT, which prevents its jarring loose.

The patentee is prepared to fill orders sufficient for four miles of track per day.

Provision has been made to prevent sliding of the rails.

American Railroad Journal.

New York Saturday, April 3, 1869.

New Railroad Corporations.

Articles of Association have been filed in the office of the Secretary of State of the State of New York, for the organization of the following Railroad Companies :

The Carthage, Watertown and Sackett's Harbor Railroad Company. This road is to run to and from the vicinity of Carthage, connecting at that point with the Utica and Black River Railroad, *via* the Black River Valley through Watertown to Sackett's Harbor, in the county of Jefferson. Length of road about twenty-seven miles. The capital stock is fixed at $700,000. The Directors are James H. Morrow, Wilna; Wm. H. Coburn, Champion; David Dexter, Rutland; Hiram Converse, Pamelia; Norris Winslow, Watertown; Pearson Munday, do.; Lotus Ingalls, do.; Lyman D. Doolittle, do.; Geo. A. Bagley, do.; George A. Shersmin, do.; Geo. B. Phelps, do.; Theodore Canfield, Hounsfield, Walter B. Clark, do.

The Syracuse and North Western Railroad Company. This road is to run from Syracuse to the village of Mexico, in Oswego county, a distance of about thirty-two miles. The capital stock is fixed at $1,250,000. The Directors named are: John A. Green, Patrick Lynch, G. G. Breed, J. Dean Hawley, Joseph J. Glass, Charles Nichols, John Greenway, George G. French, Jay L. Johnson, Ezra Downer, Charles Andrews, E. B. Alvord and F. Alvord,

The Auburn and Port Byron Railroad Company. This road is to run from the city of Auburn to the village of Port Byron, a distance of eight and one half miles. The capital stock is fixed at $300,000. The Directors named are: S. B. Kendrick, of Port Byron; Thomas B. Bunting, New York; H. H. Wainright, do.; Geo. H. Bardwell, Philadelphia; Wm. Hayden, Auburn; C. H. Wilson, New York; C. A. Stetson, Jr., do.; Robert S. Bunting, do.; Howard Bunting, do.; Faanklin Ellis, do.; Joseph C. Kerr, Philadelphia; Joseph K. Caldwell, do.; Robert A. Packer, Wilkesbarre, Pa.

The Buffalo Creek Railroad Company. This road is to run from a point on the Buffalo and Washington Railroad Company, in the city of Buffalo, to a point upon the land between the Blackwell Canal and Lake Erie. Length of road three miles. Capital stock $40,000.

The Gallupville Railroad Company. This road is to run from some point on the line of the Schoharie Valley Railroad to a point near the village of Gallupville, in Schoharie county. The length of the road is to be 4½ miles. Capital stock, $85,000. The Directors named are: Simon Morgan, A. R. Hunting, Peter Weidman, Chester Passen, Ira Zeh, Charles Armstrong, Sanford Merselis, L. Zimmer, David Becker, Weidman Dominick, Nelson Hunting, Henry Slansburgh and Lambert Bassler.

The Hudson and Mohawk Railroad Company. This road is to run from the city of Schenectady through the counties of Schenectady and Albany, in the most direct and eligible route. Capital stock $1,000,000. Distance about twelve miles. The Directors named are: Frank Chamberlain, Albany; Townsend Fonday, do.; J. E. Walker, do.. Robert L. Banks, do.; Robert M. Waterman, do.; Albion Ransom, do.; Stephen Munson, do.; H. S. McElwain, Amsterdam; William H. Taylor, Albany; Luke Dodge, Schenectady; John L. Dodge, do.; A. Bleecker Banks, Albany; James Hendrick, do.

The Northern Air Line Railroad. Capital stock, $1,000,000. The road is to run from Plattsburgh, Clinton county, through the towns of Peru and Ausable, Clinton county, and through the towns of Chesterfield, Willsborough, Essex, and into the town of Westport, in the county of Essex, and on or near the line surveyed by P. H. Green in 1852. Length of road about 75 miles. The Directors named are: Silas Arnold, Wills Mould, Thomas A. Tomlinson, Aden Weston, Abraham Welden, Lyman Barton, Eli W. Rogers, John Ross, William P. Merriam, James W. Eddy, Andrew Williams, Alvin Thomas and Robert P. Moun.

The Brooklyn Steam Transit Company. This road provides for running cars through various streets and avenues in the city of Brooklyn. Capital stock, $5,000,000. Length of road about 35 miles.

The Hamilton Avenue and Prospect Park Railroad Company. The capital stock, $125,000. Distance about three and one-half miles, in the county of Kings.

The Brooklyn and Winfield Railway. Capital stock, $150,000. Distance about five miles, all in King's county, and mainly in Brooklyn.

Columbus and San Antonio Railroad.

The San Antonio *Herald* of 6th ult., gives the proceedings of a railroad meeting at that place, which, that paper says, was a grand success, notwithstanding the bad weather. It was called to hear a proposition from Col. J. W. Stell, agent of the Columbus Railroad, in relation to the building of a railroad to San Antonio. After Col. Stell and others had spoken, the *Herald* says Col. S. was called on to open the books—and now came the most eloquent railroad arguments—namely, subscriptions of ten thousand, one thousand, five hundred, &c., until some sixty thousand dollars was forthwith subscribed as donations to the road. It now being late the meeting adjourned, not, however, before appointing three committees to keep the ball in motion. San Antonio must raise $200,000, and the balance of the country $100,000 in land, cattle, &c.

Middleburgh and Schoharie Railroad.

At the annual meeting of the stockholders of this company on the 22d ult., the following persons were unanimously elected directors for the ensuing year: D. D. Dodge, G. E. Danforth, Wm. H. Engle, L. Sanford, P. S. Danforth, M. L. Borst, G. N. Frisbie, David Becker, J. Neville, A. Haines, A. J. Freemyre, J. M. Scribner, E. Cook; David Zeh, Town R. R. Commissioner. At a subsequent

meeting of the directors, the following officers were chosen: D. D. Dodge, President; L. Sanford, Vice President; P. S. Danforth, Treasurer; J. Neville, Secretary.

Pittsburg, Ft. Wayne & Chicago Railway.

To the Shareholders and Bondholders of the Pittsburg, Fort Wayne and Chicago Railway Company:

Your Board of Directors in making this, its Seventh Annual Report, congratulate you on the prosperity that has attended the business of the Company during the last fiscal year.

While it entertained the hope during the earlier months of the year of a moderate increase in the gross and net revenues, such hope has been more than realized in the gratifying result attained, exhibiting, as it does, a large increase in the gross earnings, and a relative reduction in the expenses.

The earnings of the main line were:

From local freights		$2,021,567 93
" foreign freights		3,210,289 80
" local passengers		1,306,391 76
" foreign passengers		1,185,873 70
" express matter		119,973 00
" mail service		63,900 00
" rent of railway		85,000 00
" rent of other property		6,754 16
" miscellaneous sources		11,430 35
Total		$8,041,180 70
Gross earnings of Main Line in 1867		7,242,125 96
Increase (11¼ per cent)		$799,054 74

The gross earnings, per mile, of road, in 1868, were $17,171 00, being an increase of $1,706 39 per mile.

The expenses incurred in transacting the foregoing amount of business were:

For conducting transportation		$1,341,459 66
" motive power		1,409,545 67
" maintenance of way		1,257,735 45
" motive power		596,208 31
" general expenses		397,161 41
Total		$5,002,110 60

These expenses show an absorption of 62 1-5 per cent. of the earnings, which is five per cent. less than in 1867.

The net earnings of the main line in 1868, were	$3,039,070 10
The net earnings of the main line in 1867, were	2,378,553 89
Increase, (23 3-5 per cent	$660,516 21

NEW CASTLE BRANCH.

The net earnings of this branch were	$217,663 68
Of which was paid to the N. C. & B. V. R. R. Co	87,065 47
Leaving as this company's proportion	$130,598 21
From which deduct the expenses	69,808 46
Gives as a profit to this company	$60,789 75
Profit for 1867	55,343 93
Increase	$5,445 62

The gross earnings per mile of road of this branch (15 miles), in 1868 were $14,510 91, and compared with 1867, show an increase of $33,456 37.

LAWRENCE BRANCH.

Since the date of the last annual report, the track of this road has been extended into the city of Youngstown, an entrance having previously been effected by using about two miles of the track of the Cleveland and Mahoning Division of the Atlantic and Great Western Railway Company. At this place an engine house, freight and passenger stations, and a water house, have been erected by the Lawrence Railroad Company, giving the business of this road, at the point named, these important facilities it had previously so much needed.

The earnings during the year were	$106,153 30
And the expenses were	48,267 78
Net earnings	$57,885 52
Amount paid to the Lawrence R.R. Co.	47,762 09
Leaves as profit to this company	$10,123 43
From which should be deducted an overcharge to the Lawrence R. R. Co. last year	7,022 31
Leaving to the credit of income acc't of this company	$3,101 12

It will be noticed the gross earnings on this branch (17¼ miles), which were $6,065 90 per mile of road, have very largely increased during the year; such increase having been $33,620 21, or about 46⅓ per cent.

The rapid development of iron manufacturing in the Mahoning Valley; the prospective creation of a large coal traffic between points on the New Castle Branch over the Lawrence road to Cleveland, and the intimate relations that now do, and will continue to exist between the iron interests in, and about, Youngstown and the city of Pittsbug, give promise of remunerating returns at an early day on the investments of this company in that branch, amounting to $175,000, and represented by 35,000 shares of the capital stock. This company has continued to operate it without a permanent contract, as was stated in the last annual report, awaiting a further development of its business to serve as a reliable basis on which to form an equitable agreement or lease.

AKRON BRANCH.

The extension of this road south of Millersburg, Ohio, to the coal fields referred to in the fifth annual report, was completed during the last year, but thus far the results of the increased business have not equaled the expectations of your Board. It is expected, however, that the favorable location of the coal lands, and the superior quality of the coal to be obtained, with the advantages of a near and ready market for the same afforded by this road, will shortly attract the experience and capital requisite to properly develop the business, and thus create a large augmentation of the traffic of this branch.

The amount expended during the year for the extension was $50,685 31, principally for the iron rails for the track, making the total cost of such extension—four miles—$78,430 94.

The earnings of this road in 1868 were	$167,088 65
And the expenses were	139,169 11
Net earnings	$17,919 54

The gross earnings show an increase of $6,801 48, and the net earnings an increase of $3,037 85. The latter, after paying the interest on the mortgage debt, and about $20,000 for new equipment and right of way, have continued to be applied to the extinguishment of such debt, which at this date has been reduced from $200,000 to $153,000. During the year, one locomotive and fifty coal cars have been added to the equipment. The rails and bridges have been renewed to a considerable extent, and the whole property is in good condition, being managed with much skill and economy under the superintendence of Col. Simon Perkins.

MASSILLON AND CLEVELAND RAILROAD COMPANY.

An organization recently perfected, is now engaged in building a railroad, about twelve miles in length, from Massillon, on the main line of your road, to Clinton on the Akron branch, which will open a new line to Cleveland over the latter road, for the country contiguous to the main line, between Orville and Alliance, besides developing a region along the proposed railroad which is known to be peculiarly rich in coal deposits. The present products of the mines now open in the coal field through which this road is being built, is fifteen hundred tons per day, most of which reaches the Cleveland market by canal. With a view of increasing the developments of this business, and enlarging the traffic over the Akron Branch, between Clinton and Hudson (twenty-seven miles), your board has subscribed for one thousand shares ($50,000) of the capital stock of the Massillon and Cleveland Railroad Company. The whole road is under contract, and will be in use by the first of July of this year.

A summary of the net results of the company's business for the year is as follows:

Net earnings of main line		$3,039,070 10
Profit in operating New Castle Br.		60,789 75
" Lawrence Br.		8,101 12
Total net revenue		$3,102,960 97
From which deduct interest on mortgage debt	$816,202 17	
Sinking fund instalments	104,100 00	
Interest on bonds purchased by trustees of sinking fund	18,592 48	
Due Cleveland and Pittsburg R. R. Co., under contract for division of earnings	210,308 50	
		1,149,203 15
Balance, equal to 16 5-6 per cent. on the capital stock		$1,935,165 34
From which has been paid four quarterly dividends at the rate of 10 p. c. per annum	$1,149,725 00	
U. S. tax on the same.	60,511 83	
		1,210,236 83
Leaving surplus for year		$743,520 99
To which add:		
Increase of miscellaneous liabilities.		57,743 19
" amounts due for current expenditures		103,470 23
Reduction of supplies on hand		22,102 86
To be accounted for		$926,837 27
Appropriated as follows:		
New construction and equipment		$519,726 51
Extension of Akron Branch		50,685 31
Increase of amount due by other companies		21,541 15
Increase sinking fund		119,849 76
" miscellaneous assets		149,431 29
" cash on hand		65,603 25
Total as above		$926,837 27

The foregoing results place the financial condition of the company, at the close of the year, as follows:

Capital stock		$11,500,000 00
Bonds—1st mortgage	$5,250,000	
" 2d "	5,160,000	
" 3d "	2,000,000	
" Bridge, O. & P. R. R. Co	153,100	
		$12,563,000 00
Miscellaneous liabilities		201,582 49
Due for current expenditures, mainly in December		676,759 63
Balance to credit of income acc't		1,945,732 96
Total		$26,887,075 08

To represent, or to pay which, you have the following named property:

Main line of road, equipment, &c.	$23,402,985 17
Akron Branch	258,260 34
Stock of supplies for current operations	539,341 13
Cost of 1st and 2nd mortgage bonds held by trustees of the sinking fund	524,560 02
Due by other companies	$462,411 92
Less due them	148,789 23
	312,622 69
Miscellaneous assets, including investments	887,172 73
Cash on hand	962,132 70
Total	$26,887,075 08

The unexpected large increase of the gross earnings for the year, without a corresponding increase of the business of the Cleveland and Pitts-

burg Railroad, causes, under the contract for a division of the joint earnings, a large sum to be paid that company out of the earnings made by the road of this company. Experience will doubtless soon enable us to so adjust the per centages due to each as to practically conform to the earnings due on the business belonging legitimately to the respective roads.

A comparison of the earnings of the main line will be afforded by following statement:

	1868.	1867.
Local freights	$2,021,567 93	$1,821,207 86
Foreign "	3,210,289 80	2,662,409 06
Local passengers	1,306 391 76	1,361,188 73
Foreign "	1,185,873 70	1,077,823 66
Express matter	119,973 00	100,632 26
Mails	93,900 00	93,900 00
Rent of road	85,000 00	85,000 00
Rents	6,754 16	6,651 92
Miscellaneous	11,430 35	33,311 97
Totals	$8,041,180 70	$7,242,125 96

The total tonnage transported during the year was 1,509,052 tons of which 886,981 tons was local, and 622,071 foreign or competitive tonnage, showing an increase of 215,633 tons, or 32 1-10 per cent. in the local, and 139,068 tons, or 28 4-5 per cent. in the foreign business; in the aggregate, an increase of 354,701 tons, or about 30 7-10 per cent.

It will be noticed that neither in the cases of the local, nor the foreign or competitive freight traffic, has the increase in the revenue equaled the increase of tonnage moved. In the local business this difference is caused by the fact of a shorter haul per ton, and a less average rate received per ton per mile, amounting in each case to about eight per cent., and in the foreign business it is owing entirely to a decline in the average rate received, the average haul per ton having increased about 9¼ per cent.

In the absence, however, of this reduced rate received, it is quite probable the volume of traffic would have been diminished to an extent which would have prevented much, if any, of an increase in the freight revenue. The rates for transportation of freights, especially those that are competitive, must to a great extent be governed by the state of the markets, and the policy of other railway companies.

An analysis of the Eastern Division* shows that the tonnage, especially between way stations, continues to increase largely, and in nearly the same ratio in both directions; the large trade from the New Castle and Lawrence Branch having caused the eastward movement to preponderate over the westward movement about 11⅛ per cent. A very satisfactory increase is also shown on this Division in the competitive tonnage, especially in that moved westward; the increase in this direction having been nearly fifty-one per cent., and in the resulting earnings thirty-seven per cent.

The increase in the eastward movement was 13¾ per cent. in the tonnage, with a decline in the earnings of about 5⅛ per cent. the latter being consequent on the fact of a reduction of 13 per cent. in the average rate received, and a greater amount of tonnage carried short distances.

The freight traffic on the Western Division, also exhibits a large increase in the tonnage, more particularly in that received from or destined to other railways; but, in consequence of lower rates having prevailed the increase in the revenue derived did not quite equal the gain in the tonnage, compared with last year. A uniform degree of improvement continues to manifest itself in the local freight business on this Division.

An aggregate of 1,411,677 passengers of all classes were carried during the year, equal to 81,910 transported over the entire length of road eastward, and 105,844 westward. The number of passengers strictly local to the road was 1,252,067, and foreign or competitive, 159,610, showing an increase of 101,409, or 8 4-5 per cent. in the number of local passengers, and 16,143, or 11 1-5 per cent. in the foreign passengers. By referring to the table of earnings it will be noticed there was a dimunition in the revenue from local passengers, amounting to about four per cent. This, in the face of so large a gain in the number carried, would seem anomalous, were it not explained by the fact of the average length of the trips having been reduced twelve per cent. compared with the previous year, in addition to a slight reduction in the average rate received.

The increase in the earnings from foreign passengers has very nearly kept pace with the increase in the number carried; the slight difference being attributable to the many large gatherings of the people at different points last year, to whom was granted a reduced price for passage.

A gratifying improvement will be perceived in the travel, both local and foreign, and in the earnings therefrom, on the Western Division, and taken in connection with the increase in the freight business, before alluded to, affords a reliable indication of the progress being made in the development of the country contiguous to this part of your road. The increase referred to was 92,709, or 20 3 5 per cent. in the number of passengers carried, (of which increase about 75 per cent. occurred in the local travel), and $85,561 83, or 7 per cent. in the revenue received.

While the entire expenses exhibit an absolute increase of $138,538 53, compared with last year, a relative reduction has been effected, equal to about five per cent. of the gross earnings, which is the same as the reduction in the cost per mile run by trains. This cost in 1867 was $1 03 per mile run, and in 1868 97 6-10 cents—the latter being as low a rate of expense as is shown by other leading railway lines. In some cases it will probably be found to be lower.

An absolute decrease of expenses is shown in the motive power and maintenance of way departments. A much larger volume of traffic having been carried over the road, and, in consequence a greater amount of service by the machinery, and a larger extent of wear upon the track, indicates not only that a saving has been accomplished by reason of the general decline in the prices of material, but that a greater degree of perfection has been attained in the management of these departments.

Due consideration must be given in this connection to the favorable effect produced on the track and rolling stock by the salutary rule, rigidly enforced, of not allowing freight trains to exceed a *maximum* speed of twelve miles per hour, schedule time being ten miles. Had your road a double track on its entire main line, which would allow the transportation department to reduce the speed of all its freight trains to a *maximum* rate of eight miles per hour, and move them without intermission, except the ordinary stops, as it is now prevented from doing, by reason of the necessity of holding such trains on side tracks for the passage of other trains of a like or superior class, it is questionable whether the greater economy effected in the repairs of locomotives and cars, and the less wear on the track, would not quite, if not more, than equal the dividend on the increased capital requisite for laying such second track. A continuous movement of freight trains so far as possible, at a low speed, with an equipment and a track in high condition, and a skillful manipulation, so to speak, of the cars, so as to lessen the mileage of empty cars to a *minimum* amount, with a reduction of dead weight of both engines and cars also to a *minimum*, is undoubtedly the end to be attained in conducting a freight traffic, rates remaining the same, with the greatest profit. This end the officers of the transportation department keep constantly in view and much credit is due to them for the satisfactory results already accomplished in this direction.

The steel rails hitherto placed in the track continue to wear satisfactorily, no crushing or lamination being yet perceptible, and it is the purpose of your board to continue the use of such kind of rails to a moderate extent on such particular portions of the road as most signally exhibit the inefficiency of the ordinary iron rail.

The renewal of the track has been continued to about the same extent as for the past five years, 123 miles, or one-fourth the entire line, having been re-laid with new rails and cross ties during the year.

A solid road bed, and a smooth track, are most essential to an economical working of the other departments of transportation service, and, therefore, much attention is properly given to perfect both, as far as practicable. An improvement in this respect has been effected during the past year.

The expenditures for permanent additions to the railway and equipment have been continued during the past year to a comparatively limited extent and are shown in detail by the following statement:

Ballast	$2,232 48
Bridge masonry	41,417 42
Bridge superstructure	33,267 08
Cars—freight	144,271 49
Cross ties	3,406 91
Engine houses	12,732 88
Engineering	17,891 28
Fencing	13,805 21
Grading	75,562 46
Incidental and sundry small items	20,437 91
Iron rails	22,593 37
Locomotives	85,822 47
Real estate	970 60
Right of way	10,918 48
Splices and bolts	1,011 37
Stations and warehouses	20,495 70
Track—labor laying	2,084 58
Work and water houses	11,801 82
Totals	$519,726 51

The report of the Chief Engineer, under whose supervision $282,692 39 of the aggregate was expended, will explain more fully the particular purposes and location of such expenditures.

It will be noticed that of the estimate for the year 1869, of the expenditures to be made under the direction of the Chief Engineer, the sum of $252,400 is for bridges and culverts, about one-half of which sum is chargeable to repairs, and the remainder to construction. This is in accordance with the policy inaugurated by your Board of Directors at the organization of the present company, under which all wooden structures of this nature which might gradually be replaced by others of stone or iron, should be paid in part by the income of the road, and in part by new capital.

The amount to be charged to construction for the renewal of such bridges and culverts is for the estimated excess of the cost of the proposed new structures, over that of renewing them on the present plan, and with like material.

Additions have been made by the General Superintendent, under the authority of the Board of Directors, of seven locomotives, and two hundred freight cars have been built at the company's shops, to supply the urgent demand for increased transportation.

The equipment is still insufficient for the prompt and profitable transaction of the business offered, and your Board has accordingly authorized to have added 12 locomotives, 10 first class passenger coaches, 4 palace sleeping coaches for through passengers, and 600 freight cars, at a cost of about six hundred and fifty thousand dollars. It is expected that all of this new equipment can be turned out of the shops of the company. This class of your property now consists of: Locomotives, 205, first class coaches, 93, second class coaches, 26, baggage cars, 28, mail cars, 7, express cars, 19, paymaster's cars, 1, director's car, 1, box freight cars, 1,157, stock cars, 542, flat and gondola cars, 1,085, market cars, 6, caboose cars, 94, tool cars, 8.

A continued improvement has been made during the year in the condition of the equipment

* That portion of the Railway (188 miles in length) between Pittsburg and Crestline, is called the *Eastern Division*, and that portion (280 miles in length) between Crestline and Chicago, is called the *Western Division*.

generally, and, as will be noticed by the report of the General Superintendent, but a very small relative portion is now undergoing repairs.

The local travel on the eastern end of the Eastern Division warrants the extension of the runs of the present accommodation trains: in one case to Beaver Falls, (about 1½ miles,) and in the other to Enon Valley, (about 16 miles.) Engine houses, and turn-tables for the use of the locomotives detailed for these trains, are accordingly in course of construction at the above named points, a blacksmith shop being added at Enon Valley. This new arrangement is expected to take effect during the month of April proximo.

The continued increase in the tonnage and trains over the Eastern Division of the main line, particularly in that received from the New Castle and Lawrence Branches, has rendered imperative the construction of the second track from Rochester, its present terminus, to Beaver Summit, a distance of nearly ten miles. Your Board of Directors has ordered this work to be put under contract, and it is expected to complete it for use during the present summer. Before commencing the undertaking, the Chief Engineer, under general instructions, has succeeded in greatly improving the allignment of the present track. The extent of this improvement will be better understood and appreciated when it is stated that the curvature will be reduced from the original location as follows: between Rochester and New Brighton, three miles, seventy-five degrees, and between New Brighton and Homewood, six miles, three hundred and eighteen degrees, being in the aggregate thirty-three degrees more than contained in a perfect circle. The distance will be reduced eight hundred and forty-three feet, and the radii of the curves very greatly increased.

The improved allignment must greatly lessen the cost of operating and maintaining this portion of the road, besides materially reducing the risks of accident.

The completion and opening of the Central and Union Pacific Railroads from the Missouri River to the Pacific Ocean, during the present year, with the completion of other roads in process of construction immediately west of the Mississippi River, will undoubtedly develope a very largely increased traffic on all the leading east and west railway lines, of which you may reasonably expect your road to receive its full share, occupying as it does a central position, and forming, as it will, with its eastern and western connections, the shortest and best line between the two oceans. To which may be added, the growth of the way-side traffic, resulting from the constant and regular development of the country immediately tributary to the railway. This prospective increase in the business to be accommodated will render necessary continued expenditures for additional sidings and new equipment, besides increased facilities in the way of station houses, machine shops and engine and car houses, together with purchases of real estate on which to locate them, and the side tracks pertaining thereto.

Indeed the accommodation of the business at the eastern terminus of the road has for more than a year past been such as to cause it to be done at a serious expense, vexatious delays, and causing great annoyance to the officers and patrons of the road by reason of the restricted facilities in the station grounds, side tracks and suitable buildings. These have remained nearly stationary for the past six years, while the tonnage traffic at this particular point has doubled. To terminate these evils, and anticipate reasonable future demands for station grounds, track and building room, as well to avoid an enormous futnre outlay by reason of the rapid growth of Allegheny City, and advance in real estate, about ten acres of additional grounds have been purchased or arranged for adjoining the outer depot in that city, at a cost of about $100,000. The grading of the grounds, and putting down the additional side tracks necessary for the present business, will involve an expenditure of about $35,000 this year.

The means of the company, after paying the dividends, will not be sufficient to pay for all the equipment, improvements and additions, that it is decided to make during the present year, and therefore your Board, under and to the extent of the authority conferred by the company and charter enabling it to incur a temporary debt, not exceeding five per cent. of the capital stock, has caused to be prepared $500,000 of bonds, maturing in five years from March 1st, 1869, and bearing interest at the rate of eight per cent. per annum, and to be known as "equipment bonds." These bonds will not be sold under par, and the proceeds applied to payment for the additional equipment already ordered as heretofore stated in this report.

Your Board of Directors, in pursuance of the authority conferred by the charter, has accepted as a part of the charter of the company "An act relating to railroad companies and common carriers, defining their liabilities, and authorizing them to provide means of indemnity against loss of life and personal injury," approved April 4th, A. D., 1868. The principal provisions of the act are to limit the liabilities of the company to three thousand dollars for personal injuries, and five thousand dollars in the event of loss of life.

The policy of aggregating capital and roads, referred to and commented on in the last Annual Report, continues, and has to some extent agitated that portion of the public pecuniarily, or otherwise, interested in railways and their management. The public prints have, without sufficient reason, identified this company and railway in these movements. Since the date of the last report no contract arrangement, or alliance of any kind, has been made with any other railroad company other than the usual arrangement with connecting roads, for interchange of business. With a view to quiet the apprehensions of the very large class of stock and bondholders of this company, who held for investment, and not for speculation or other purposes, and who desired some assurance of permanence in the policy and management of a property in which they desired to allow their investments to remain, application has been made to the Legislature of Pennsylvania to so modify the charter of the company as to give a degree of permanence to the Board by making it a continning body; that is, that the services of only a portion of the Board should terminate at each successive annual election. The Legislature, recognizing the principle as one familiar to the State, as applied to municipal, money and elemosynary corporations, and as wise in itself, granted the application by enacting a law in the form following, viz:

SUPPLEMENT TO AN ACT,

Entitled "An Act to provide for the re-organization of the Pittsburg, Fort Wayne and Chicago Railroad Company, approved March thirty-first, Anno Domini, one thousand eight hundred and sixty, to provide for a classification of the Board of Directors."

SECTION 1. *Be it enacted by the Senate and House of Representatives of the Commonwealth of Pennsylvania in General Assembly met, and it is hereby enacted by the authority of the same,* That it shall be lawful for the Board of Directors of the Pittsburg, Fort Wayne and Chicago Railway Company, by lot, or otherwise, to so classify the members thereof, that one-fourth (as near as may be) shall terminate their official term, as Directors at the first next annual election thereafter, and one-fourth at each subsequent election, and after being thus classified the stock and bondholders shall elect only the numbers of the Board of Directors necessary to fill the vacancies created by the expiration of the period of services fixed as aforesaid.

[Signed.] JOHN CLARK,
Speaker of the House of Representatives.
RUSSELL ERRETT,
Speaker of the Senate, pro. tem.

Approved the third day of February, Anno Domini, one thousand eight hundred and sixty-nine, JOHN W. GEARY,

By virtue of the powers conferred in the second section of the law chartering the company, the Board has accepted this modification of the charter, and filed the acceptance with the Secretary of State of the several States of Pennsylvania, Ohio, Indiana and Illinois, and acted under the same by classifying the Board of Directors into classes as follows:

First Class—W. B. Ogden, John Sherman, Jesse L. William, whose term of service expires at this election (1869.)

Second Class—Springer Harbaugh, Pliny Hoagland, R. R. Springer, whose term of service expires at the annual election in 1870.

Third Class—John L. Dawson, Kent Jarvis, L. H. Meyer, whose term of service expires at the annual election in 1871.

Fourth Class—G. W. Cass, J. F. D. Lanier, J. Edgar Thomson, S. J. Tilden, whose term of service expires at the annual election in 1872.

So far as the shareholders have been heard from an unqualified approval of this amendment of the charter has been expressed, and your Board cannot doubt you will collectively approve of the policy and wisdom of it.

So far as your property is concerned, the only combination of railway interest of any significance which has taken place during the year, is the practical absorption by the Pennsylvania Railroad Company, of the road and branches of the Columbus, Chicago and Indiana Central Railroad Company, throngh a lease by the Pittsburg, Cincinnati and St. Louis Railway Company (popularly called the Pan Handle Line,) the majority of the capital stock of this last named company being owned and voted upon by the Pennsylvania Railroad Company. The road thus coming into the practical ownership and control of the Pennsylvania Railroad Company extends from Columbus, Onio, to Chicago, and by a bifurcation eighty miles west of Columbus to Indianapolis, Indiana, and by means of a second bifurcation at Logansport, Indiana, to the State line of Illinois, there connecting with the Toledo, Peoria and Warsaw Railroad, and the significance consists in the fact that it gives to the Pennsylvania Railroad Company an alternative route to Chicago in which she has a very large sum of money invested, and upon such terms (for the present at least) as must make the officers of that Company very solicitous to augment the business of their new acquisition; and also the further fact that its pecuniary interest in the route to St. Louis by way of Columbus and Indianapolis is also greatly increased by the lease of the Indiana road, and may thereby cause her to discriminate against the route to St. Louis over your road via Crestline and Indianapolis; and to this last view of the case must be added the further fact that the Pittsburgh, Cincinnati and St. Louis Railway Company (Pennsylvania Rail Road Company in fact) in now aiding in building, as the four-fifths owner, the road from Terre Haute to St. Louis, via Vandalia, so as to make almost a continuous ownership, and doubtless a practical control, from Pittsburgh to St. Louis.

Having fully stated these facts, and the results which might flow from them, we have this qualification to add that we have the assurance of the present officers of the Pennsylvania Rail Road Company, that it is their purpose to so liberally manage their roads west of Pittsburgh, as not to improperly interfere with the business of this Company, and that the Pennsylvania Rail Road shall always be open for the business of this road, in either direction, on terms as favorable as to those roads in which she is pecuniarily interested.

The last Annual Report explained the terms and object of the lease of the St. Louis, Alton and Terre Haute Rail Road to the Indianapolis and St. Louis Rail Road Company, and the interest which this Company held therein, as also the failure of the original plan by reason of the Pennsylvania Rail Road Company having withdrawn from the arrangement, and the hope was expressed, that this last named company might yet harmonize its interests with the remaining parties originally intended. This hope has not been realized, but as stated above, the Company is now

already engaged in the building of a parallel line, and as no satisfactory arrangement of a permanent character can be made with the* Terre Haute and Indianapolis Rail Road Company for the use of their road, no alternative remains but for the Indianapolis and St. Louis Rail Road Company to build a parallel road from Indianapolis to Terre Haute. The surveys, location and estimates have been completed, bids for the work received, and contracts in part awarded. To aid in the construction, your Board has authorized the President to subscribe for six thousand shares (fifty dollars each) of the capital stock of the company. The Cleveland, Columbus, Cincinnati and Bellefontaine Rail Road Company has subscribed for a like amount, and the necessary financial arrangements have been made to furnish all the money necessary to complete the road, which with the proper effort, can be done this year. When completed the whole line from Crestline to St. Louis (460 miles), will pass under the management of the Indianapolis and St. Louis Rail Road Company, of which this company will be the owner of half the share capital, and have an equal voice in the management of the road.

Since the date of the last Annual Report, the greater portion of the unfinished part (between Connellsville and Cumberland), of the Pittsburgh and Connellsville Rail Road, has been put under contract, and the whole line from Pittsburgh to Baltimore will doubtless be brought into use next year.

An effort is being made by the Allegheny Valley Rail Road Company to extend its road across the mountains into the Susquehanna Valley, by a route of very easy grades and curves, and a moderate cost of construction. The completion of these two roads cannot but magnify Pittsburgh as a railway center, and increase the business of your road.

Your Board has again to congratulate you on the fact that the utmost harmony and good feeling exists in all departments of the Company's service, and that it fully exhibits itself in the result as set forth in this Report.

G. W. Cass, *President.*

Pittsburgh, March 17, 1869.

Supreme Court of the United States.

Thomas C. Butler, Plaintiff in Error, vs. Benjamin F. Horwitz. In error to the Court of Common Pleas of the State of Maryland. Mr. Chief Justice Chase delivered the opinion of the Court.

The principles which determined the case of *Bronson vs. Rodes* will govern our judgment in this case.

The record shows a suit for breach of a covenant for payment of rent contained in a lease of certain premises in the City of Baltimore, made in 1791, for ninety-nine years, renewable for ever, upon an "annual rent of fifteen pounds current money of Maryland, payable in English golden guineas, weighing five pennyweights and six grains, at thirty-five shillings each, and other gold and silver at their present weights and rates established by act of assembly."

The obvious intent of the contract was to secure payment of a certain rent in gold and silver, and thereby avoid the fluctuations to which the currency of the country, in the days which preceded and followed the establishment of our independence, had been subject, and also all future fluctuations incident to arbitrary or uncertain measures of value, whether introduced by law or by usage.

It was agreed in the court below that the rent due upon the lease, reduced to current gold and silver coin, was, on the first day of January, 1866, forty dollars; and judgment was rendered on the 27th June, 1866, for fifty-nine dollars and seventy-one cents.

This judgment was rendered as the legal result of two propositions: (1) That the covenant in the lease required the delivery of a certain amount of gold and silver in the payment of rent; and (2), that damages for non-performance must be assessed in the legal-tender currency.

The first of these propositions is, in our judgment, correct; the second is, as we think, erroneous.

It is not necessary to go at length into the grounds of this conclusion. We will only state briefly the general propositions on which it rests; some of which have been already stated, more fully, in *Bronson vs. Rodes.*

A contract to pay a certain sum in gold and silver coin is, in substance and legal effect, a contract to deliver a certain weight of gold and silver of a certain fineness, to be ascertained by count.

Damages for non-performance of such a contract may be recovered at law as for non-performance of a contract to deliver bullion or other commodity.

But whether the contract be for the delivery or payment of coin or bullion, or other property, damages for non-performance must be assessed in lawful money; that is to say, in money declared to be legal tender in payment, by a law made in pursuance of the Constitution of the United States.

It was not necessary in the case of *Bronson vs. Rodes*, nor is it necessary now, to decide the question whether the acts making United States notes legal tender are warranted by the Constitution. We express no opinion on that point; but assume, for the present, the constitutionality of those acts.

Proceeding upon this assumption, we find two descriptions of lawful money in use under acts of Congress, in either of which damages for non-performance of contracts, whether made before or since the passage of the currency acts, may be properly assessed, in the absence of any different understanding or agreement between parties.

But the obvious intent, in contracts for payment or delivery of coin or bullion, to provide against fluctuations in the medium of payment, warrants the inference that it was the understanding of the parties that such contracts should be satisfied, whether before or after judgment, only by tender of coin, while the absence of any express stipulation, as to description, in contracts for payment in money generally, warrants the opposite inference of an understanding between parties that such contracts may be satisfied, before or after judgment, by the tender of any lawful money.

This inference as to contracts made previous to the passage of the acts making United States notes a legal tender, is strengthened by the consideration that those acts not only do not prohibit, but, by strong implications, sanction contracts made since their passage for payment of coin; and consequently, taken in connection with the provision of the act of 1792, concerning money of account, require that damages upon such contracts be assessed in coin, and judgment rendered accordingly; leaving the assessment of damages for breach of other contracts to be made and judgments rendered in lawful money. It would be unreasonable to suppose that the legislature intended a different rule as to contracts prior to the enactment of the currency laws, from that sanctioned by them in respect to contracts since. We are of the opinion therefore that under the existing laws, of which, in respect to legal tender, the constitutionality is, we repeat, in this case assumed, damages may be properly assessed and judgments rendered so as to give full effect to the intention of parties as to the medium of payment. When, therefore, it appears to be the clear intent of a contract that payment or satisfaction shall be made in gold and silver, damages should be assessed and judgment rendered accordingly.

It follows that in the case before us the judgment was erroneously entered. The damages should have been assessed at the sum agreed to be due, with interest, in gold and silver coin, and judgment should have been entered in coin for that amount with costs. The judgment of the Court of Common Pleas must, therefore, be reversed, and the cause remanded for further proceedings.

Journal of Railroad Law.

RAILROAD COMPANIES—ACCIDENTS—RULE OF DAMAGES—CONTRIBUTORY NEGLIGENCE.

The facts of Rothe *vs.* Milwaukee and St. Paul Railway Company (21 Wisc., 256,) are as follows: This action was brought by the administrator of one Schuh, under Secs. 12, 13, ch. 135, of the Revised Statutes to recover damages from the defendant for having negligently caused the death of said Schuh. The Circuit Court non-suited the plaintiff, on the ground that it appeared from his own evidence that the deceased was guilty of negligence which contributed to the injury. Plaintiff appealed from the judgment.

The facts upon which the decisions of this Court and the Circuit Court are based, will sufficiently appear from the opinion. Those facts on which the plaintiff relied to show negligence in the defendant, are not deemed important here.

Cole, J.—We think the evidence introduced by the plaintiff clearly showed that the deceased, Schuh, was guilty of great negligence, which contributed to produce his death. It seems that he had just passed over the railroad track into the mill, went down stairs, and placed two bags of shorts on his right shoulder, so as to completely obstruct his view on that side, (and probably so as to prevent his hearing in the right ear,) and walked directly up out of the mill on to the track, where he was struck by the cars. Persons standing around saw the cars approaching, and the deceased would doubtless have seen them too, had he exercised ordinary care and prudence in looking about him before passing on to the track. Although the space lying between the mill and Third street was open, and used by the public to pass and repass to and from the mill and elsewhere, yet it was not one of the street crossings. The deceased knew about the location of the track, and that cars were passing there frequently, and it was his duty to look about him, and not to walk blindly against moving cars. It seems to us, after carefully considering all the evidence, that the deceased was guilty of great negligence, which directly contributed to produce the injury. Under such circumstances, the law is well settled that the company is not liable.

By the Court.—The judgment of the Circuit Court is affirmed.

Kansas Pacific Railway.

The following is a copy of the joint resolution of the Senate and House of Representatives of the United States of America, authorizing the Union Pacific Railway Company, Eastern Division, to change its name to the "Kansas Pacific Railway Company."

Be it resolved, etc., That the Union Pacific Railway Company, Eastern Division, is hereby authorized, by resolution of its board of directors, which shall be filed in the office of the Secretary of the Interior, to change its name to the "Kansas Pacific Railway Company."

Approved March 3, 1869.

☞ The New Bedford and Taunton Railroad Company have unanimously accepted the act in addition to the charter, authorizing the extension of the road from Taunton to Hebronville.

*The Terre Haute and Indianapolis Rail Road Company is the owner of one-fifth of the new road building from Terre Haute to St. Louis via Vandalia.

RAILROAD SHARE LIST, including Mileage, Rolling Stock, Debts, Income, Dividends, &c., &c.

An asterick (*) occurring in the column headed "Rolling Stock" signifies that the cost thereof is included, in that headed "Railroad." A *dash* (—) across the column signifies "nil," and running *dots* (.....) signify "not ascertained." Land Grant Railroads are printed in "*Italics*." State-aid Railroads are distinguished by a "†."

American Railroad Journal.

Saturday, April 3, 1869.

Stock Exchange and Money Market.

Money has been working closer and closer each successive day of the week under review. The city banks have been heavily drawn upon by their country correspondents, and have been endeavoring, not only to respond to those calls, but to strengthen their own now rather imprudently expanded position, in anticipation of a demand from the Comptroller of the currency, for an exhibit of their resources under the amended law which gives to the Comptroller the power practically to designate the day's business which shall be made the basis of the sworn return to the Bureau. The banks have lost during the week, nearly 3½ millions of deposits, over three millions of specie and nearly a quarter of a million of legal tender notes. They have now within their control but 50½ millions of legal tender reserve, and about 12 millions of specie, making an aggregate of gold and greenbacks, of about 62½ millions, as against over 82 millions in the middle of January. Their loan averages on the other hand were increased nearly a million last week, and the aggregate is now about 264 millions as against 259 millions early in January. Their deposits are now down 180 millions against over 197 millions at the close of January. Their daily clearances last week averaged nearly 133 millions, showing a remarkable increase within the part three weeks. The Sub-Treasury made heavy disbursements on Tuesday, exceeding eight million dollars, thus reducing its cash balances to 88½ millions, as against 94¾ millions on the preceding Tuesday. The offerings of money to even street houses have been much less liberal both on bank and private account, and exceptionally high rates have been exacted for accommodation. Very few borrowers have been aided at the legal rate of 7 per cent. in current. The more general rate has been 7 per cent. in gold, on call. On Wednesday Money was in particularly brisk request, and quoted up to ⅛ @⅛ per cent. a day. Business paper has been rated at from 9@12 per cent. per annum, and has been sparingly dealt in at even these advanced figures. The city bank exchanges on Wednesday were $131,905,291, and the resulting balances $2,658,043.

The specie reserve of the city banks is now $12,073,722, against $17,323,367 same time last year. The city bank deposits are now $180,113,910, against $186,525,128 week ending March 28, 1868. The legal tender reserve amounts to $50,555,103, against $52,123,078 same time last year. The circulation now stands at $34,717,814, against $24,190,808 same time last year. The loans are now $263,909,859, against $257,378,247 at this date last year. The Bank Exchanges at the Clearing House through the past week, averaged $139,997,747 a day, against a daily average of $121,785,000 the preceding week, and $104,862,927 the week ending with March 10, 1869. The current week's exchanges average about $145,089,000 a day. The city banks, last week, reported a further loss of $3,139,584 of specie, $3,391,089 of deposits, and of $219,771 of legal tender notes. They increased their loans, $811,387; and their circulation, $36,504.

National Bank notes to the amount of $159,160 were issued last week by the Treasury Department, making the total issue to 1,685 banks thus far, amount to $313,460,896, against $282,555,440 at the close of the fiscal year ending June 30, 1866. From the total issue is to be deducted the currency returned, including worn out notes, amounting to $13,564,573, leaving, with the existing 1,626 banks, (having an aggregate capital of $418,858,931,) an actual circulation at this date, of $299,896,323. The United States bonds held by Treasurer Spinner in trust for National Banks as security for circulating notes amount to $342,740,100; and for the public deposits, $32,418,350—making a total of $375,158,450. The Treasury Department last week redeemed and destroyed $563,335 of worn and mutilated fractional currency, and issued $452,253 of new. The outstanding amount of fractional currency on the 1st of March, 1869, was $36,781,548, against $35,511,127, on Feb. 1, and $34,215,716 on the 1st of January.

The U. S. Sub-Treasury receipts, week ending with March 27, were $6,208,777, including $2,537,835 from customs duties; payments, $5,260,937, including $184,590 of coin interest; balance at the close of the week $94,690,283, against $93,742,441, at the close of the preceding week, showing an increase of $947,842. The business of the Office during the first two business days of the current week, was as follows: On Monday,

receipts, $2,178,336, including $598,796 from customs; payments, $2,405,468 including $65,545 of coin interest. On Tuesday, receipts, $1,206,104 including $670,000 from customs and, payments $8,150,708 including $29,911 of coin interest. The balance at the close of business on Tuesday stood at $88,518,543, against $94,762,700 a week previous; and $91,631,258, on March 10, 1869. The aggregate receipts of the office in March were $40,051,331, including $13,241,405 from customs, aggregate payments, $40,897,476, including $3,698,831 of coin interest.

The outstanding amount of coin certificates on the 1st of April was $21,672,500 against $28,775,560, March 1; $32,659,520 on Feb. 1, and $27,036,020 on the 1st of Jan., 1869. The Sub-Treasurer at this port issued, last week, coin certificates to the amount of $384,000, and retired $2,437,251 through the receipts for customs. The coin certificates issued by the Sub-Treasury office, during March, reached $1,793,180.

Government revenues have been yielding more satisfactorily since our last. The excises, last week, yielded about 4⅛ millions; customs at the port of New York, $2,537,835, and at the outports about $850,000 (in coin) more, making the grand total income for the week equal to about $9,158,275 in currency. The total receipts of the National Treasury, from excises, during the fiscal year ending with June 30, 1868, were $191,180,564. The receipts from the same source, thus far in the current fiscal year, commencing with July 1, 1868, have been about 111 millions, according to the latest Washington advices.

Gold has been firm and active, most of the week, at from 130⅞@131⅝ closing on Wednesday at 131⅜. No business was transacted at the Gold Board on Good Friday. The speculative inquiry has been quite confident. There has been an increased customs call. The export demand, however, has been quite insignificant. The severe decline in foreign exchange leads to the belief that we shall soon have to record the importation of gold from Europe, to pay for the export purchases of American bonds, securities, and produce. It is also thought probable that the Government will make an anticipatory payment of the accruing May interest on the public debt.

The Gold Exchange Bank clearances on Wednesday, were $74,805,000, and the resulting balances $2,256,900 in coin, and $3,056,407 in currency.

The average amounts of the Gold Exchange Bank loans and discounts last week was $1,825,892, average amount of specie $622,265, average amount of deposits $1,298,879.

The customs demand for Gold last week, averaged $423,000 a day; thus far, this week, it has averaged $624,398 a day, or equal to a weekly aggregate of $3,806,388. The arrivals of specie from Europe, Havana and other foreign ports, during the week were $1,099,945, and since Jan. 1, $3,611,742 against $1,638,199 same time in 1868. The receipts from California, last week, were $103,261. The total customs revenue of the Government, in coin, at this port, from July 1, 1868, to date was $93,333,860, against $84,043,248 same time in the preceding fiscal year. At San Francisco, from Jan. 1, to Feb., 27th 1869, $1,062,192, against $1,195,059 same time last year. The *Alaska* delivered $350,619 of California Gold on Thursday.

The total receipts of California gold at this port, since July 1, 1868, have been $16,225,428, against $24,741,789 same time in fiscal year 1867–'68, showing a decrease in the current fiscal year, of $8,516,361. The exports of specie, from this port, last week, were $1,857,163, against $556,675 same week last year; total, since July 1, 1868, $30,535,028, against $42,288,423 in 1867–'68. Government disbursed last week through the U. S. Sub-Treasury here, on account of the coin interest on the public debt $184,590; since July 1, 1868, $66,714,383, against $54,244,606 same time in 1867–'68. The specie exports from San Francisco, from Jan. 1, to March 10, 1869, were $7,721,269, against $7,034,562 same time in 1868.

Foreign Exchange has been very freely offered, and has declined materially in price. The demand has been unusually limited most of the week. On Wednesday, rates were lower, irregular, and more or less nominal, under the Money pressure. Bankers' prime sixty day bills on London closed on Wednesday at 107⅜@107⅞, and on Paris to 5.25@5.20; sight bills on London to 108@108½, and on Paris to 5.20c. @5.18¾. The offering of produce bills has been more liberal this week. The week's exports of domestic produce and miscellaneous goods from this port have been to the currency value of $3,085,395, against $3,996,447 same week last year; total, since July 1, 1868, $119,835,318, against $134,744,653 same time in preceding fiscal year of 1867–'68.

Government securities have been in much less request, but the light offerings have promptly found buyers, without any material fluctuation in values. The market showed rather more firmness on Tuesday and Wednesday, notwithstanding the activity in Money.

U. S. sixes of 1881 closed here on Wednesday at 115⅜@115⅝; U. S. Five-twenties of 1862, 118@118½; U. S. Five twenties of 1864 at 113⅞@114; U. S. Five-twenties of 1865 at 115⅞@116; U. S. Five-twenties of 1865, consolidated, 112⅞@113; U. S. Five-twenties of 1867, 113@113½; U. S. Five-twenties of 1868, 113⅛@113¼; U. S. Ten-forties at 105⅜@105½; U. S. Six per cent. currency bonds, 103¼@104½.

The latest quotations at the London Stock Exchange compare as follows with former returns:

	Mar. 17.	Mar. 24.	Mar. 31.
Consols	93⅛	93⅛	93⅛
U. S. 5-20's of 1862	83½	83⅜	83¾
Erie	24¾	24½	24¾
Ill. Central	96¾	97	96¾

The dealings in Railway and miscellaneous share property have been quite extensive at generally much firmer and decidedly buoyant prices, despite the stringency in Money.

Most kinds of domestic produce closed tamely and heavily, influenced, in part, by the activity in Money. There has been more movement in Cotton, Provisions, and Breadstuffs at variable figures, closing weak in most instances. Middling upland cotton closed on Wednesday at 29 cts. per lb. The stock of cotton now here is estimated at about 115,000 bales. The receipts at the port this week, have averaged about 2,000 bales a day. The receipts at all the ports, since Sept. 1, 1868, have been 1,869,000 bales, against 1,868,000 bales same time in 1867–'8; exports, same time 962,500 bales, against 1,265,000 bales same time in 1867–'8; stock on hand at latest dates, 398,000 bales, against 330,000 bales same date 1868. Total crops of 1867–'8, 2,430,893 bales; total receipts at ports year ending Sept. 1, 1868, 2,240,282 bales; total exports thence, same time, 1,657,015 bales. The exports of domestic cotton goods from this port, since Jan. 1, have been 6,429 pkgs., against 2,743 pkgs., same time last year. From Boston, 3,050 pkgs., against 3,420 pkgs. same time in 1868. At the Live Stock markets, this week, Beeves have been in less demand at from 11@17c., per lb.; week's receipts, 4,227. Milch cows at from $40@$125, each, receipts, 89. Veal calves in fair request at from 10½@13c. per lb.; receipts, 866. Sheep and lambs at from 6½@9¾c., per lb.; receipts, 16,192. Swine very quite at from 10¾@11¼c. per lb.,; receipts, 11,958. At the auction sale of Scranton Coal on Wednesday 80,000 tons were disposed of at a shade firmer prices, ranging from $4.25@5.00 per ton of 2,240 lbs. deliverable at Elizabethport, N.J. Foreign merchandise has been less freely dealt in, and prices have been less buoyant. The total imports of foreign dry goods, last week, were $1,984,205, and the total amount marketed $1,883,029. The value of foreign merchandise imported last week, was $5,818,251—making the grand total specie value of last week's imports of dry goods and merchandise, equal to $7,802,546, against $5,297,173 same week last year; total since July 1, 1868, $195,098,000, against $167,338,980 in 1867–'8. The freight market has been quiet though quoted firm. For Liverpool we quote flour at 1s. 3d.@1s. 6d. by sail, and 1s. 6d. @1s. 9d. by steamer, per bbl.; grain at 8@8½d. by sail, and 4d.@4½d. by steamer, per bushel; cotton at ¼d. by sail, and ¼d.@$\frac{1}{16}$ by steamer, per lb.; and heavy goods 12s. 6d.@25s. by sail, and 15s.@30s. by steamer, per ton. Total number of vessels in port on Wednesday, 541.

In regard to the possibility of the Secretary of the Treasury entering the market as a buyer of U. S. bonds, it is urged that he has been given full authority to do so, in the Sinking Fund law of Feb. 25, 1862, and other enactments as set forth in the annexed provisions:

SINKING FUND LAW, FEB. 25, 1862.

SECTION 5. *And be it further enacted*, That all duties on imported goods shall be paid in coin or in notes heretofore authorized to be issued and by law receivable for public due, and the coin so paid shall be set apart as a special fund, and shall be applied as follows:

FIRST—To the payment of the interest on the bonds and notes of the United States.

SECOND—To the purchase or payment of one per centum of the entire debt of the United States, to be made within each fiscal year, after the first day of July, 1862, which is to be set apart as a sinking fund, and the interest of which shall in like manner be applied to the purchase or payment of the Public Debt, as the Secretary shall from time to time direct.

THIRD—The residue thereof to be paid into the Treasury of the United States.

AUTHORITY TO DISPOSE OF GOLD—MARCH, 1864.

Resolved, That the Secretary of the Treasury be authorized to anticipate the payment of interest on the Public Debt by a period not exceeding one year, from time to time, either with or without a rebate of interest on the coupons, as to him may seem expedient, and he is hereby authorized to dispose of any gold in the Treasury of the United States not necessary for the payment of interest on the Public Debt. *Provided*, That the obliga-

tion to create the sinking fund, according to the act of Feb. 25, 1862, shall not be impaired thereby.

The New York exports, exclusive of specie, for the week ending Mar. 30, and since the beginning of the year, compare as follows:

	1868.	1869.
For the week	$3,996,447	$3,085,395
Prev. reported	38,466,498	34,017,757
Since January 1	$42,462,945	$37,103,152

The imports for the week ending March 27, and since the beginning of the year, have been as follows:

	1868.	1869.
Dry goods	$1,670,180	$1,984,295
Gen. merchandise	8,626,993	5,818,251
Total for the week	$5,297,173	$7,802,546
Previously reported	50,330,025	61,882,316
Since January 1	$55,627,198	$69,684,862

The balance in the Sub-Treasury on Wednesday was $87,695,447 31.

The following quotations of sales of Railway and other securities are in addition to those given elsewhere in our columns:—

The Public Debt Statement.

The public debt statement for the month ending April 1, just issued, differs from that of last month, in containing full details of the consolidated items heretofore shown.

The decrease has been about $2,500,000, which would have been greater had the statement been postponed until the 5th or 6th of April, so as include all of the receipts of the last month, some of which have not yet been returned to the department. The present statement shows an aggregate of debt bearing coin interest, $2,107,876,650; debt bearing interest in lawful money, $68,605,000; matured debt not presented for payment, $6,003,403; debt bearing no interest, $414,418,485; total debt, principal outstanding, $2,596,898,538; and interest accrued, $39,303,916; amount of coin in the Treasury, $82,530,865; coid represented by gold certificates, $21,672,500; currency in the Treasury, $6,802,628; debt less cash, $2,525,196,461; total amount of bonds issued to the Pacific Railroad Company, $56,852,320.

The amount of interest which has accrued prior to January 1 and 16, 1869, is $3,800,000, and of this amount the Government has received from transportation, &c., $1,317,352, leaving a balance due to the United States of $2,828,750.

Messrs. Pusey & Pardee.

The business of furnishing railroad iron and supplies has grown to such dimensions that it now constitutes an important branch of our commerce. Producers and consumers find their natural meeting point in New York, which distributes nearly all the iron in use in this country. By reference to the advertisement of Messrs. Pusey & Pardee, (formerly Charles J. Pusey,) of 74 Broadway, it will be seen that they have the sole agency for several manufactories, among others the celebrated Atkins Bro's Rolling Mills, of Pottsville, whose rails are said to be equal to the best in the market for evenness and finish. As the Atkins Mills proprietors are the owners of their own ore beds, coal mines and machinery, and have their works situated in the heart of the coal and iron region of Pennsylvania, it is claimed that they can by large experience and capital obtain the greatest perfection in rails with the minimum of cost. The new firm are also prepared to furnish rolling stock, fish-plates, spikes, and generally to execute commissions for railway material. We commend them to the attention of purchasers.

Allegheny Valley Railroad.

The proposed extension of this road to the west branch of the Susquehanna, will run through Clarion, Jefferson, Clearfield and Cameron Counties, and will connect with the Philadelphia and Erie road at Emporium, a point on the latter line. The course of the line will be along the valleys of Mahoning Creek and Bennett's Branch, and the grades will be very easy, not exceeding twenty feet to the mile. It is the intention ultimately to extend the line to Williamsport.

☞ It is understood that the construction of the Spuyten Duyvil and Port Morris Railroad, by which the Hudson River, Harlem and Port Morris Branch Railroads are to be connected, will be commenced at an early day. The most tedious and formidable part of the work will be that of cutting a passage 24 feet wide, through a point of rocks 70 feet high, for a distance of 1,000 feet.

Railroads of the State of Pennsylvania.

A tabular Statement of their Capital, Length, Cost, Earnings, Expenses, Dividends, &c., for the fiscal year ending October 31, 1868.

Compiled from the Annual Reports to the Hon. J. F. HARTRANFT, State Auditor.

(1) Including leased roads; but not including second and side tracks. (2) Including taxes, National, State and local, of all kinds. (3) Leased and operated by Philadelphia and Trenton Railroad Company. (4) Leased and operated by Northern Central Railroad Company. (5) The rates of dividend on street railroad stocks are computed on the amount of stock paid in; in the original returns these are stated at so much per share whether fully paid or otherwise.

From Herapath's Railway Journal.

Steel.---The Bessemer and the Heaton Processes.

The stone age only exists in men's minds as a dim mythological speculation; that which succeeded it, the bronze age, has by the light of archæological science been made more palpable, and its epoch more definitely fixed; but the iron age is one of modern date, its history is known, the facts connected with it have been carefully registered and widely disseminated, and the benefits it has conferred on mankind duly appreciated; but it, in its turn, is destined to be superseded by another, which has even now commenced, and is making rapid strides, and which has a still greater future before it in placing in the hands of man a material superior to all others previously known, for the purpose of turning to his advantage the hidden wealth and powers of nature.

Not twenty years ago steel was an *article de luxe*, and was only employed when absolutely needed, its more general application being precluded by its great cost, its use was therefore limited principally to the various descriptions of cutting tools, springs, wire, and certain parts of machinery, where hardness and durability were of greater importance than first cost, but the last ten years has witnessed a wondrous change in the state of things, for steel is now stealthily but surely encroaching on the domain of wrought iron, and it has already usurped its place in many of its most important applications. This result has been mainly brought about by the Bessemer process, by which steel can be produced in large homogeneous masses at a cost not more than that of some of the high class brands of wrought iron. The Bessemer process is, however, limited in its application, for it requires a very pure iron to make a good quality of steel, and thus only iron in this country that has as yet proved suited to it is that made from the hematite ores of Cumberland, these being free from those deleterious ingredients, sulphur and phosphorus, the presence of which in any quantity are fatal to steel, and which the Bessemer process as at present carried out fails to eliminate.

It does not, however, follow that because this difficulty has not yet been surmounted it never will be, but until it is, the Bessemer process, great as is the revolution it has brought about, can never become universal. It is therefore with satisfaction that we call attention to another process, the invention of Mr. Heaton, which professes to deal with the commonest descriptions of iron, and to make from them an excellent quality of steel.

Before comparing these two processes it will be well to glance at the question generally, and to inquire what really constitutes good steel, and in what it differs from iron in its cast and wrought state.

Iron is an elementary substance, but it is never met with in a pure state in commerce, although the Swedish irons, and some of the higher brands of English make are nearly so. Steel is an alloy of iron and carbon, in which the proportion of carbon varies from .5 to 2 per cent., its chief distinctive feature being that when heated and quenched in water its hardness is increased to an extraordinary degree, and in proportion to the amount of carbon it contains. Steel iron may be considered iron combined with less than .5 per cent. of carbon, which increases its tenacity and toughness, but without imparting to it the quality of hardening when cooled in water. Cast iron is an alloy of iron and carbon, in which the proportion of carbon amounts from 2 to about 5 per cent., the larger part of which is chemically and the rest mechanically combined.

Iron is of such a refractory nature that it cannot be melted by any ordinary process, but it can be forged and rolled, and any number of pieces may be welded together by bringing them to a white heat. Steel and steel iron can be melted at a high temperature, the higher the less carbon it contains, and when cast into an ingot it can afterwards be drawn out or rolled the same as iron. Cst iron can be melted at a less heat and cast into any form required, but it cannot afterwards be forged or rolled, but crumbles to pieces under the hammer at any heat. It will thus be seen that steel and steel iron combine the two distinctive characteristics of both cast and wrought iron. Steel is capable of being fused and cast into a homogeneous mass of any required form, and after that is done it will admit of being hammered, rolled, drawn, or otherwise wrought like malleable iron, by which its toughness, density, and tenacity are greatly increased. It is the possession of these two valuable qualities combined, more than its greater actual strength, that will ultimately cause it to occupy the place of wrought iron. The importance of ensuring perfect soundness and homogenity in large forgings cannot be over-estimated. How often the safety of a vessel depends on the strength of the engine shaft or the soundness of an anchor. What fearful accidents sometimes occur from the failure of the crank shaft of a locomotive or the snapping of a tyre, and yet until the introduction of mild steel, wrought iron was the only material applicable for these purposes; and when it is remembered that every forging, however great its size, is made up of a number of pieces originally not more than 80lb. each, which were united together by welding, and that in performing this operation a large proportion of the welds must be imperfect from dirt, scale, rust, and other impurities which coat the surfaces, and prevent a perfect union of the metal, it is easy to understand what a great disideratum a process is which enables the metal to be cast into a solid homogeneous mass free from flaws, bad welds, and other imperfections, at anything like a moderate cost.

In the manufacture of steel in the ordinary way the raw ore is first made into cast iron, which is puddled and made into wrought iron bars about 3in. x ½. These are converted into steel by cementing in a close furnace with charcoal, from which they absorb the requisite carbon. They are then melted in crucibles and cast into ingots. Here we have a complicated and round-about process. The iron in the ore is first impregnated with carbon to excess in the blast furnace, then robbed of it in the puddling furnace, and then impregnated again with a less quantity in the converting furnace; but the steel made by this process is of such a superior quality that for the higher classes of uses, where quality is of more importance than cost, neither the Bessemer, nor other process for making steel direct from pig iron, is for the present at least likely to supersede it.

The Bessemer process, as is well known, consists in blowing air into molten cast iron contained in a vessel termed the converter, the oxygen of the air coming in contact with the carbon in the iron, combustion ensues and the carbon is burnt out; a small quantity of spiegliesen is then added to give the exact dose of carbon requisite to produce the quality of steel desired. Now it is found that if the iron operated upon contains impurities such as phosphorus, sulphur, and silicon, that they are not removed by this process, so that only the high class irons can be employed, which are of course expensive. Nevertheless, the process is so economical that good Bessemer steel rails can be sold at a price only about 50 per cent. more than that of ordinary iron rails. Mr. Heaton professes that by his process the common qualities of iron may be employed, and that he can consequently produce good steel at a less price than can be made by the Bessemer process. Mr. Heaton effects the conversion of cast iron into steel by means of nitrate of soda, about 2 cwt. of which for each ton of steel to be made, is placed in the bottom of the converting vessel and covered with a perforated cast iron plate. The molten cast iron is then run into the converter. Its heat decomposes the nitrate and sets free its oxygen, which combines with and burns the carbon out of the iron, while the soda we presume effects the same object with regard to the sulphur, phosphorus, and other impurities; the result being a steel of good quality from iron unsuited for the Bessemer or other known process for making steel direct from cast iron.

The question, then, as to the comparative cost of production between the two processes turns upon this---as regards the materials employed, which costs less, the high-priced iron used in the Bessemer process, or the lower-priced iron, plus the nitrate of soda used by the Heaton process? Upon this point the two inventors disagree. Mr. Bessemer states that he can make good steel from iron costing 65s. to 70s. per ton, but Mr. Heaton doubts his being able to obtain it under 80s. He, however, takes the price at 70s., to which he adds 8s. for the dose of spiegliesen, and 5s. for the air (we presume he means the cost of forcing it into the converter) making in all 83s., while the cost of the iron required for his process he gives at 42s., plus 21s. for the nitrate, together 66s. Mr. Bessemer admits a waste of 12½ per cent., though Mr. Heaton asserts that 17½ is the lowest percentage yet attained. What the waste is by the Heaton process does not, however, appear in the papers before us, so that no comparison can be instituted on this point. It would not, we should think, be less than that by the Bessemer process. Taking it as the same, the cost of the materials employed would show a considerable advantage in favor of the Heaton process. There is a point, however, in reference to the cost of production by the Bessemer process which must not be lost sight of, and that is the royalty of £2 per ton charged, we believe, by Mr. Bessemer, and which of course increases the price of steel made by his process by this amount, but in less than a year Mr. Bessemer's two first patents, containing the gist of his invention, will expire, and anyone will be at liberty to make steel by blowing air through molten cast iron without paying any royalty at all. The question will then be, will the greater economy of the Heaton process, carrying a royalty, enable it to compete with the Bessemer process when relieved of royalty, and under the altered circumstances of an increased developement, consequent on this very circumstance and the keener competition resulting therefrom?

On the question of the first cost of plant necessary to carry out the operation, Mr. Heaton takes credit for his process, showing a considerable saving over that of Mr. Bessemer's, but in this we think his statements are open to criticism. Undoubtedly the plant usually employed by Mr. Bessemer's licensees is much more costly than that at present in use at the Langley Mills, but then a considerable part of this is for the purpose of manipulating the steel after it has been made, and the object is to save manual labor in carrying out the various subsequent operations, and should be charged to that portion of the process; if we regard the two processes simply up to the point of producing the steel in the converter, there would hardly be any important difference with the exception of the blowing engine necessary under the Bessemer process, the cost of which would be but a very small percentage on the steel made in a year.

The next question is as to the respective qualities of the steel produced. There are three points which indicate quality in steel or iron, the ultimate tensile strength, its elasticity shown by the strain it will bear without exceeding the elastic limit, and its ductility shown by the amount it will stretch before breaking. Mr. Kirkaldy's report gives the average strength of the Heaton steel iron as under—28 tons per square inch with an extension at rupture of 21 per cent. Mr. Heaton professes for it the qualities of the Lowmoor and Bowling irons, but in this he over-estimates it, as these and the Farnley iron have a breaking strain on the average of full 26 tons per square inch, with an ultimate elongation of 24 to 25 per cent., while plenty of the good ordinary brands of Staffordshire and Scotch irons have a breaking strain of 24 tons, and elongate 20 to 22 per cent. The cast steel gives a higher result as regards the breaking strain, but it is very deficient in extensibility. We should look for something like 12 to 15 per cent. with a breaking strain of 40 tons, but we should prefer a tensile strength of about 30 to 35 tons, with an extension of 20 to 25 per cent., which is very commonly obtained with good

Bessemer steel. Every allowance ought, however, to be made for Mr. Heaton's process being in its infancy. It would be unreasonable to expect that in such a difficult art as steel-making he should arrive at a perfectly satisfactory result with his present limited experience, and if he has only accomplished making steel free from sulphur and phosphorus, from the ordinary Cleveland and similar ores, he has achieved a most important object, and he will no doubt be able in time to improve the quality of his steel either by a judicious blending of irons or some other means which practice will suggest.

N. O., Mobile and Chattanooga Railroad.

The New Orleans *Picayune*, says that the New Orleans, Mobile and Chattanooga Railroad Company "are pushing forward their work in the parish of St. Bernard, just below the city. The contractors we understand, are at work in the rear of the Aptime plantation. Everything about the road begins to assume a life-like character that argues well for its certain and speedy completion."

☞ The following gentlemen have been elected directors of the New York and Oswego Midland Railroad Company: D. C. Littlejohn, Wm. Foster, D. W. C. Stevens, E. T. Hayes, John A. Randall, A. C. Edgarton, Henry E. Bartlett, E. Palen, J. W. Merchant, H. K. Low, Elisha P. Wheeler, Cheney Ames, Waldo Hutchins. President, D. C. Littlejohn; Secretary, B. Gage Berry; Treasurer, W. M. Conkey; Engineer, W. B. Gilbert.

☞ Orders have been given by the officers of the combined New Jersey Railroad Companies between Philadelphia and New York to furnish tickets and check baggage to and from Philadelphia and New York by *all the through trains* running between New York and Washington, *via* West Philadelphia, so that no train running either way now declines to receive passengers.

☞ The stockholders of the Ascutney Railroad, which is to connect the Claremont road, by the way of Springfield, with the Rutland and Burlington, have elected directors as follows: President, J. A. H. Ellis, of Springfield; John B. Page, of Rutland, and Albert Brown, F. P. Ball, J. W. Pierce, and F. G. Field, of Springfield. This road will probably be built instead of the Rutland and Woodstock route.

☞ The Governor of Illinois has signed the bill passed by the Legislature authorizing the railroad companies in the State to divide their Boards of Directors into three classes, the term of office of the first class to expire on the day of the annual election for officers next ensuing, the second class one year thereafter, and the third class two years thereafter.

☞ The controlling powers of the Alexandria, Loudoun and Hampshire Railroad are about to push the work forward as rapidly as possible, and the line will at once be put into the hands of contractors as far as Winchester.

☞ The bonded debt (1st mortgage) of the Pensacola and Georgia and Tallahassee Railroads recently sold at auction, amounts to $1,426,000, viz: that of the Pensacola and Georgia to $1,218,000; of the Tallahassee, to $208,000.

ALBANY AND SUSQUEHANNA RAILROAD COMPANY.—TREASURER'S OFFICE, ALBANY, March 29th, 1869.—The interest due on the first day of April, 1869, on the Second Mortgage Bonds of this Company, will be paid on and after that date at the Banking House of Messrs. Dabney, Morgan & Co., No. 53 Exchange place, in the city of New York.
2tl4 W. L. M. PHELPS, Treasurer.

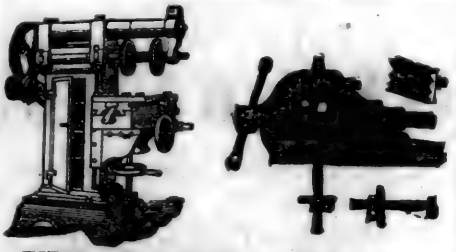
LOCOMOTIVE WORKS,
FOR SALE.

The PROPERTY situated at Jersey City, known as the
JERSEY CITY LOCOMOTIVE WORKS,

Consisting of 24 full lots on Morgan, Steuben and Warren streets, with substantial buildings and machinery of the best description, ample for the manufacture of six to seven first-class locomotives per month. This property, from its vicinity to the city and to several of the leading railroads of the country is well worth the attention of those desirous of engaging in the manufacture of locomotives and other machinery. Apply to

C. KNEELAND,
No. 49 William st.,
Or **W. G. HAMILTON,**
4tl4 **No. 24 Broadway.**

Railway Travel Made More Secure.



THE WHEELS HAVE STRAIGHT FLANGES 25 degrees double, two other wheels inside, elongated hubs to catch the rail in case the wheel jumps, the axle of steel enlarged in centre. The circle of the flanges on wheels cannot touch the rail—¾ metal is shrunk on the rail by rollers doubling their strength. Smoke-stacks, increased draft, with jacket, sparks and cinders glided into the same by sleves, these are also for steamers, etc. Invented, applied, and for sale by

A. BEEBE,
78 Cedar street.

Steam Engine Power and Leverage

BALANCE WHEELS AND MOVEABLE LEVERS. These work giving double power without centre action. Capstans and Steering Wheels, levers on the shaft or axle, about one part purchase and six parts lever, same on rudder heads for vessels and boats, etc. Invented, applied and for sale by A. BEEBE, 78 Cedar street, from 12 to 3.

PLAYER & HENDERSON,

PRATT'S
PATENT COMPENSATING FISH-JOINT,

MADE BY

VERREE & MITCHELL,
IRON AND STEEL MANUFACTURERS,
No. 939 North Delaware Avenue, Philadelphia, Penn.

COMBINES MORE ADVANTAGES THAN ANY FISH-JOINT HERETOFORE INTRODUCED.

This Joint is made of two heavy bars of wrought iron, or cast steel, sixteen inches in length, or any other desired length, fitted to the side of the rail and secured by four three-quarter inch bolts, with four malleable cast-iron cups and washers, and a gum ring two inches in diameter and half an inch thick, in each cup.

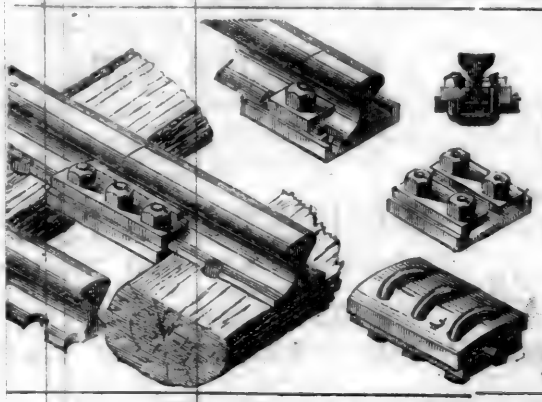
The value of gum to absorb jarring motion is well known; but when the pressure is as great as that required to secure the ends of railroad rails, some device, or method by which to prevent the gum from being forced out from under the washer, when subjected to increased pressure, is indispensable. The PATENT COMPENSATING FISH-JOINT secures that effect and enables Railroad Managers to apply all the force and pressure desired.

Where this Joint is securely fastened by screwing the nut upon the washer and gum in the cups with a lever three feet in length, it makes a perfectly tight joint, and thus secures what Railroad Managers have long desired—*a continuous rail*, with sufficient elasticity in the gum to relieve from and compensate for the sudden jar, and at the same time allow for expansion and contraction by heat or cold.

We confidently claim for the PATENT COMPENSATING FISH-JOINT:

That it makes the best and cheapest form of fastening, requiring no plate or chair underneath the foot of the rail.

That it is safe and secure, and prevents the numerous accidents resulting from loose or broken rails.



That this Joint absorbs the vibratory shock given by the wheels in passing over the ends of rails, and thereby preventing fracture; and we have yet to hear of the first rail having been broken with our Joint on it.

That it can be applied in repairing and relaying with the least trouble and delay.

That the materials are indestructible, and make A PERFECT AND CONTINUOUS RAIL, thus securing what has long been desired, and what all previous experiments have failed to attain.

The Manufacturers can supply these Joints, complete in all their parts, ready to be fastened to the rails with dispatch.

Refer to all the Leading Railroads in the Country.

Railway Economy.—Permanent Way.

MR. EDITOR.—In your issue of March 27th, and in the number preceding, I find quite a lengthy account, taken from *Herapath's Railway Journal*, and styled "Railway Economy.—Permanent Way."

I have read the same with interest, and as the writer sums up in favor of the steel rail, on account of its durability as compared with iron rails under the same service and treatment, and the writer having entered into a mathematical calculation based on exhibits made clear by the use of both, I can see, Mr. Editor, no objection to a further talk on the same subject for the benefit of whomsoever it may concern, whether the manufacturer of Bessemer steel rails, or the consumers of them. My subject only differs in the amount of steel used and the manner of using the same, which is to use it only as a wearing surface, and also renewable—the old steel reconvertible into other well known uses for which there is a constant demand, and at a loss of only two cents a pound on the one-fourth part of the whole rail, and then not until the rail has earned for the company the sum of $16,409 per mile over and above what it has cost to maintain an iron rail track for the same period of time. Such a rail we now have in these United States of America, composed of steel one part, and of iron three parts, inseparable in use, but separable at will after use. As it is different from all other rails, we will distinguish it by calling it "Booth's Duplex Safety Steel and Iron Rail," now just becoming brightened a little after two years of hard service—75 trains a day having passed over it since first laid—and some half dozen iron rails laid opposite one of these rails have been replaced and worn out.

It is now from self-evident demonstrations that we can go on and make figures on the same ground of estimate, as has been done by the writer in "Herapath," who gives the life of the iron rail, 3 years, While this Booth rail promises good for 20 years, we will only make estimates for 15 years; and in that, we charge the Booth rail with one renewal.

To make short as possible, we will give footings only, adding the interest on the money expended on each kind of rail to date. No compound interest charged in the account.

We will make two estimates, one for 12 years, and one for 3 more years, renewing the Booth rail once, and at the 12th year. Amount of rail 100 tons. First we take old rails, re-roll and lay at a cost of $4,100. In 3 years from that time, the said rails have been taken up, transported, re-rolled and relaid, which we charge $4,400. In 6 years charge $4,400; in 9 years the same, and the 12th year the same. Interest 7 per cent. on each expenditure, including the 12th year. This will foot up $26,288, no charge made for value of old iron in either rail, while the Booth rail capped with ¼ steel at the time the old rail is re-rolled, the same having been rolled to receive the steel, in place of the track, the cost of steel, labor and laying, charged $100, is also charged for first laying, as with the iron rail, and the footing is $9,879, leaving a sum in favor of the latter, of $16,409, for one mile or 100 tons.

Suppose at the end of the 12th year we do renew the Booth rail with new steel, we take it up, transport, recap and relay at an expense of $15 per ton, and this we know we can do, add $400 for labor as for the iron rail, transportation and interest for 3 years, and we have $2,299 to add to cost up to the first day of the 13th year—making $12,178. The iron rail we again add $4,400 and 3 years interest to last report, making $31,612, leaving a difference in favor of the Booth rail of $19,434, and the iron rail again reduced, while the Booth rail has only 3 years of new wear upon it.

The iron rail has been during this 15 years a rough, uneven surface rail two-thirds of the time, needing constant watching, and perhaps broken at times and caused great loss by accidents. These points of merit not before taken into account, will do much towards mitigating what may be considered excess in only calling three years the life of an iron rail. We will add in support of this time estimate, that there is over a mile of the Booth rail laid on the New York Central R.R., where there has been four entire new tracks of iron rail laid in twelve years, and this in addition to the constant change of old rails for new, that is always taking place. This mile of track is no exception to the whole line of track running east over 200 miles from this rail, lest it be on a descending grade with the line of transit. On this double track road, 20 trains per day, passenger and freight, pass over it daily.

J. L. BOOTH.

Pittsburg and Connellsville Railroad.

During the past winter several of the contracts on this road were thrown up by the parties who had undertaken them, they averring that they had already lost large sums, and would lose more should they continue the work. This of course checked the progress of the work somewhat. Last fall forty-three sections were let, and forty-seven remained unlet, between Cumberland and Connellsville, a distance of ninety miles. Those sections which were let at that time comprised the heaviest work on the line. The company have now, says the Cumberland *Civilian*, determined to put the entire work under contract; to let all the sections which have not been heretofore bid for, as well as to relet those which have been thrown up during the winter. The specifications will be ready for distribution at their office by the 9th instant. The work will be put in hand at once,

and the officers of the company will make every effort to have the road opened and cars running between Pittsburg and Cumberland by the fall of 1870.

Chicago and Alton Railroad.

The earnings of this road for the years ending December 31, 1867 and 1868, were as follows:

	1867.	1868.
From passengers	$1,209,706 96	$1,305,570 16
" freight	2,430,008 36	2,953,629 39
" express Co.s	154,036 52	127,290 65
" U. S. mail	85,362 50	47,753 96
" miscellaneous	63,747 14	74,398 81
	$3,892,861 48	$4,508,642 97
Expenses, viz:		
Conducting transp	$477,288 85	$501,191 73

Taxes	113,108 98	111,125 27
General expenses	93,356 00	87,422 31
	$2,149,128 06	$2,463,182 64
Net earnings	$1,743,733 42	$2,045,460 33
Add balance to credit of income account, December 31, 1867		924,352 28
Total to be accounted for		$2,969,812 61
Disbursed as follows:		
Payments to 1st mortgage sinking fund		$42,000 00
Dividend March, 1868, 5 per cent. and U. S. tax		331,968 42
Dividend September, 1868, 5 per cent. and U. S. tax		398,015 78
Interest on income bonds		76,090 00
Interest on sinking fund bonds		30,345 00
Interest on 1st mortgage bonds		166,810 00
U. S. tax on sinking fund payments		2,100 00
Rent paid Joliet & Chicago R. R. Co.		162,049 97
Rent paid St. Louis, Jacksonville and Chicago R. R. Co., 7 months		140,000 00
Improvements in 1868, paid from earnings		635,766 07
Surplus, December 31, 1868		984,667 37
Total, as above		$2,969,812 61

The capital stock and funded debt of the corporation at the close of the past and preceding years compared as follows:

Capital stock:	1867.	1868.
Common	$3,886,500	$5,141,800
Preferred	2,425,400	2,425,400
Totals	$6,311,900	$7,576,200
Bonded debt:		
Sinking fund bonds	$444,000	$402,000
First mortgage bonds	2,400,000	2,400,000
Income bonds	1,100,000	1,100,000
Totals	$3,944,000	$3,902,000

The amount expended in improvements in 1868, was $1,575,439 37—of which $939,673 30 was paid from proceeds of capital stock sold, and the balance, $635,766 07, charged to income account, as above. The report says:

This company, on 1st January, 1864, commenced operating the Joliet and Chicago Railroad, and assumed the liability to pay interest and dividends on the bonds and stock of that company, as follows:

Mortgage bonds, 8 per cent., on	$500,000
Stock, 7 per cent., on	1,500,000

Since the date of the last report, this company has acquired, by lease, possession in perpetuity of the St. Louis, Jacksonville and Chicago Railroad, at a minimum rental of $240,000 per annum.

The fixed charges upon your property for the year 1869 may therefore be stated as follows:

Preferred sinking fund bonds, for interest and sinking fund payments	$72,000
First mortgage, say	168,000
Income bonds, say	77,000
Joliet and Chicago lease, say	160,440
St. Louis, Jacksonville and Chicago lease, (minimum rental)	240,000
Total	$717,440

Including sinking fund payments and Government tax.

At the date of your last Annual Report, the St. Louis, Jacksonville and Chicago Railroad was operated under a contract made with this company, dated January 25, 1864, by which that road was entitled to a pro rata proportion of earnings on joint business, and a bonus of ten per cent. upon that portion of such business as belonged to your company.

It was deemed important that the possession of this line of road should be vested in your company, beyond question, and permission having been asked to lease the same in perpetuity, and the same having been granted by the nearly unanimous vote of the stockholders, the St. Louis, Jacksonville and Chicago Railroad, on the first day of June last, practically became the property of your company, and is now operated as a division of your road, under the immediate control of your officers.

As has been remarked in previous Reports, the section of country traversed by this leased line of road (151 miles) is as rich and fertile as that bordering upon your main line, and your Directors believe that it will contribute materially to the advancement of the interests of the whole property.

The earnings of that road, for the seven months to 31st December last, have been fully equal to our expectations when the lease was made, and the change has been of advantage to your company, not only in immediate pecuniary results, but mainly in precluding the possibility of the property falling into the hands of adverse interests.

Including the earnings of the Jacksonville division for seven months, the aggregate amount exceeds the earnings of the previous year $615,781.49. The gross earnings of the main line amounted to $4,188,941.34, about 7.75 per cent. in excess of 1867.

The operating expenses amounted to 54.6 per cent. of the gross earnings, as against 55.2 per cent. for the preceding year.

The number of passengers transported during the year amounted to 608,874, an increase over the number carried in 1867, of 77,657, or 14.6 per cent. Of this number, 574,253 were way, and 34,621 through; 299,562 were moved north, 309,312 were moved south. Increase in number of way passengers, 16.1 per cent. Of the whole number carried, 94.3 per cent. were local, and 5.7 per cent. were through. Average fare paid by each way passenger, $1 67.8.

Not a single passenger was killed or injured during the year, on account of any defect in the track or equipment, or through the negligence of your employees.

The total amount of freight transported during the year was 1,831,423,502 pounds, embracing 333,972,000 pounds coal. The increase in the coal traffic is 41,872,000 pounds, and the whole tonnage of the road exceeds that of the previous year 380,388,486 pounds, about 22 per cent.; 91.4 per cent. of the tonnage was way, and 8.6 per cent. through.

In order to increase the capacity of your road for traffic, and facilitate the rapid movement of the trains, which have largely increased in number consequent upon the growth of your business, there have been constructed eight miles of additional track, between Wilmington and Braceville, and eight miles between Dwight and Odell, making sixteen miles of double track now in operation. During 1869 the distance between Braceville and Dwight will also be constructed in the same manner, thus giving the road the use of about thirty miles of continuous double track.

The same policy, if pursued, will result in time in the completion of a double track between Wilmington and Bloomington, being that portion of your road on which there is the greatest movement of trains.

The coal traffic of your road continues to increase in magnitude and importance, and every encouragement is being extended to aid in the developement of a business which will contribute largely to your income in the future. In order to show the increase in this branch of an almost entirely new business on your road, it will be of interest to note, that during the year 1865, 6,000 tons were transported; 1866, 71,090 tons; 1867, 146,050 tons; 1868, 166,986 tons.

According to the statistics of the Board of Trade, 51 per cent. of the whole amount of bituminous coal received by rail in Chicago, during the year 1868, came over your road. During three months of the year the mines that usually contributed largely to your business, were not operated, on account of the miners being "on a strike." This fact will explain the small per centage of increase in the tonnage over 1867; but new mines are being opened contiguous to your line, and the old ones are again being worked, and a large increase in the business is confidently expected during the present year.

In your last Annual Report it was stated that it was the intention of the Directors to obtain additional ground at Bloomington, upon which to erect fire-proof buildings, on an enlarged and more convenient plan, to take the place of those destroyed by fire on the night of Nov. 1, 1867. Arrangements were made with the city of Bloomington by which your company acquired, free of expense, eighteen acres additional ground for shop purposes, and the new shops are in a comparative state of forwardness, and will be completed at as early a date as possible.

At the close of the year 1867, the number of locomotives owned by your company was 72. During the first six months of the past year 10 were added, and on the first day of June, 15 were acquired by purchase from the St. Louis, Jacksonville and Chicago Railroad Company, making the total number 97 now owned by your company. As evidence that your motive power has been kept in a state of efficient working order, it is only necessary to call your attention to the fact that on the last day of the year 1868, 91 out of the 97 locomotives were in condition to do duty on the road.

Ten new locomotives have been contracted for, and they are to be delivered next spring, and with this addition it is believed the motive power of your company will be fully adequate to the requirements of the business of the line for the year.

The company have constructed at their shops, during the year, 2 passenger cars and 100 platform cars. 300 freight cars, built after our own standard pattern, were purchased from the Barney & Smith Manufacturing Company, and 6 passenger, 5 baggage and 183 freight cars were added to the equipment, by purchase from the St. Louis, Jacksonville and Chicago Railroad Company.

The company now own 42 passenger, 13 baggage, 7 express, and 1,938 freight cars.

The whole number of miles run by locomotives was 2,137,581, an excess of 464,615 over the mileage made by engines the previous year.

Average cost per mile run for each locomotive, including repairs, wages, fuel, etc., is 31.41 cents, being 2.47 cents per mile less than the preceding year.

The average cost per mile run for repairs is 10.25 cents, against 11.05 cents for 1867, a decrease of about 7¼ per cent.

There have been used in repairs of road, 5,158 tons new and re-rolled iron, 481 tons steel rails, 3,680 tons repaired iron, and 173,832 cross ties. 6,500 tons of new rails, and 150,000 ties, should be used for repairs the coming year.

The steel rails have been laid in the yards at Chicago, Bloomington and Alton, where the traffic is very heavy.

GENERAL BALANCES, December 31, 1868.

Cost of road and equipment	$11,433,523	32
Machinery and tools	119,701	89
L. H. Meyer and S. J. Tilden, Trustees, bonds, in their hands	37,813	89
Bonds held by Trustees on renewal account	50,000	00
Chicago and Mississippi Railroad Company bonds, etc., owned by this company	2,500	00

	Of this amount the United States has received for transportation, &c., the sum of					$1,317,352 78
	Balance due					$2,828,760 34

Railroads of the State of New York.

OFFICE OF STATE ENGINEER & SURVEYOR,
ALBANY, March 1, 1869.

To the Honorable the Legislature of the State of New York:

In compliance with the requirements of act, chapter 140, laws of 1850, I herewith respectfully submit the Annual Report on Railroads for the year ending September 30, 1868, as prepared by my Deputy, S. H. Sweet.

During the year, 36 companies have organized and filed their articles of association in the office of the Secretary of State, under the general railroad law or special acts. The aggregate length of these proposed roads is about 750 miles, and the total capital stock, $23,125,000. One hundred and fifty-seven companies have made reports to this department.

The following abstract shows the aggregate stock and debts, cost of road, characteristics, business of the year, receipts and disbursements, &c., &c., of these companies:

ABSTRACT

Of the Report of Railroad Corporations for the year ending September 30, 1868.

STOCK AND DEBTS.

Roads operated by steam:	
Amount of capital stock by charter and acts of the Legislature	$196,502,910 00
Amount of capital stock subscribed for	149,618,341 38
Amount of capital stock paid in by last report	111,896,655 36
Amount of capital stock now paid in	152,647,019 04
Amount of funded debt as by last report	73,063,045 45
Amount now of funded debt	77,433,763 79
Amount of floating debt as by last report	5,651,536 55
Amount now of floating debt	7,910,017 16
Total amount now of funded and floating debt	87,343,780 95
Roads operated by horse power, &c.:	
Amount of capital stock by charter and acts of the Legislature	$18,953,000 00
Amount of capital stock subscribed for	16,696,800 00
Amount of capital stock paid in as by last report	14,784,682 00
Amount of capital stock now paid in	16,022,025 00
Amount of funded debt as by last report	8,016,500 00
Amount now of funded debt	9,299,900 00
Amount of floating debt as by last report	754,767 40
Amount now of floating debt	612,949 00
Total amount now of funded and floating debt	9,912,849 00

COST OF CONSTRUCTION AND EQUIPMENT.

Roads operated with steam:	
For graduation and masonry	$46,387,771 76
For bridges	8,178,675 64
For superstructure, including iron	30,499,869 23
For passenger and freight stations, buildings and fixtures	7,785,680 90
For engine and car houses, machine shops, machinery and fixtures	2,886,324 85
For land, land damages & fences	11,492,134 27
For locomotives and fixtures and snow plows	8,655,384 65
For passenger and baggage cars	2,399,135 93
For freight and other cars	8,484,054 41
For engineering, agencies, &c.	13,301,602 97
Not classified	73,115,148 71
Total cost construction and equipment	$208,185,782 82
Roads operated by horse power, &c.:	
For road bed and superstructure, including iron	$12,259,711 18
For lands, buildings and fixtures, including land damages	3,814,789 23
For dummy cars, horses, mules and harness	2,272,537 53
For cars and sleighs	1,258,900 52
Not classified	1,527,588 21
Total cost construction and equipment	$21,133,521 67

CHARACTERISTICS OF ROADS.

Roads operated with steam:	
Length of roads in miles	4,567 99
Length of roads laid	3,053 95
Length of double track, including sidings	1,354 21
Length of branches laid	702 72
Length of double track on same	42 79
Length of equivalent single track	5,153 67
Number of engine houses and shops	208
Number of engines	1,111
Number of first class passenger cars	979
Number of second class cars	184
Number of baggage, mail and express cars	362
Number of freight cars	17,934
Roads operated by horse power, &c.:	
Length of roads in miles	315 31
Length of roads laid	267 37
Length of double track, including sidings	194 25
Number of dummy cars	26
Number of passenger cars	1,658
Number of freight cars	59
Number of horses and mules	9,663

BUSINESS OF THE YEAR.

Roads operated with Steam.

Passenger business:	
Miles run by passenger trains	9,829,671
Number of passengers, all classes, carried in cars	18,484,800
Number of miles traveled by passengers, or number of passengers carried one mile	658,078,513
Average rate of speed of ordinary passenger trains, including stops	Miles. 18.55
Average rate of same when in motion	23.60
Average rate of speed of express passenger trains, including stops	24.79
Average rate of same when in motion	29.74
Average weight, in tons, of passenger trains, exclusive of passengers and baggage	86.89
Freight transportation:	
Miles run by freight trains	12,396,129
No. of tons carried in freight trains	11,961,962
Total movement of freight, or number of tons carried one mile	1,308,451,978
Average rate of speed of freight trains, including stops	Miles. 11.70
Av. rate of same when in motion	15.43
Average weight, in tons, of freight trains, exclusive of freight	146.72
Classification of freight:	Tons.
Products of the forest	895,808
Products of animals	1,270,276
Vegetable food	1,804,590
Other agricultural products	545,268
Manufactures	1,155,596
Merchandise	1,371,430
Other articles	4,632,464
Not classified	286,320
Total	11,961,692

Roads operated with Horse Power, &c.

No. of passengers carried in city cars	146,326,486

COST OF MAINTAINING ROADWAY.

Roads operated by Steam.

Allotted to passenger transportation:	
Repairs of road bed and way, exclusive of iron	$2,666,848 96
Cost of iron for repairs	1,493,307 96
Repairs of buildings	878,979 10
Repairs of fences and gates	47,981 28
Taxes on real estate	474,342 04
	$4,456,459 34
Allotted to freight transportations:	
Repairs of road bed and way, exclusive of iron	$3,319,316 61
Cost of iron for repairs	2,787,561 96
Repairs of buildings	601,816 34
Repairs of fences and gates	93,418 21
Taxes on real estate	759,504 04
	$7,561,617 06
Allotted to passenger transportation	$4,456,459 34
Allotted to freight transportation	7,461,617 46
Other costs not allot'd	1,056,517 73
	$13,074,494 13
Roads operated by horse power, &c.:	
Repairs of road bed and way, buildings and fixtures, including iron	$311,286 51
Taxes on real estate	150,129 11
	$461,415 62

COST OF REPAIRS OF MACHINERY.

Allotted to passenger transportation:	
Repairs of engines	$1,087,519 89
Repairs of cars	1,214,401 65
Repairs of tools, etc	82,317 32
Incidental expenses, oil, fuel, etc	111,259 56
	$2,495,498 42
Allotted to freight transportation:	
Repairs of engines	$1,853,049 86
Repairs of cars	2,245,722 56
Repairs of tools, etc	160,640 56
Incidental expenses, oil, fuel, etc	216,455 55
	$4,469,868 55
Allotted to passenger transportation	$2,495,498 42
Allotted to freight transportation	4,469,868 55
Not allotted	526,484 23
	$7,491,851 20

COST OF OPERATING THE ROADS—ROADS OPERATED WITH STEAM.

Allotted to passenger transportation:	
Office expenses, stationery, etc	$99,650 78
Agents and clerks	545,364 96
Labor, loading & unloading freight	64,899 62
Porters, watchmen and switchmen	348,928 23
Wood and water station attendance	58,745 82
Conductors, baggagemen and brakemen	697,106 23
Enginemen and firemen	616,619 95
Fuel, cost and labor of preparing for use	1,510,146 78
Oil and waste for engines and tenders	165,913 47
Oil and waste for cars	27,890 32
Loss and damage of goods and baggage	11,575 09
Damages for injuries to persons	528,310 37
Damages for property and for cattle killed	14,462 20
General superintendence	137,510 01
Contingencies	594,351 76
	$5,421,575 41
Allotted to freight transportation:	
Office expenses, stationery, etc	$213,703 18
Agents and clerks	1,051,224 56
Labor, loading & unloading freight	1,218,964 50
Porters, watchmen and switchmen	566,428 68
Wood and water station attendance	98,242 49
Conductors, baggagemen and brakemen	960,912 25
Enginemen and firemen	1,115,939 77
Fuel, cost and labor in preparing for use	2,331,778 70

Earnings.

Roads operated with steam:		
From passenger business		$14,855,689 21
From freight business		31,570,967 74
From other sources		2,886,548 48
Not allotted		64,584 61
		$49,779,790 04
Roads operated with horse power, &c.:		
From passenger business		$8,040,460 04
From freight business		10,285 83
From other sources		211,545 69
Total earnings		$8,262,291 56

PAYMENTS OTHER THAN FOR CONSTRUCTION.

Roads operated with steam:		
For transportation expenses		$35,737,830 13
For interest		4,771,556 72
For dividends on stock		5,624,800 07
Amount carried to surplus fund		220 524 65
Not included above		1,919,765 24
Total payments		$48,274,476 83
Roads operated with horse power:		
For transportation expenses		$6,796,898 51
For interest		575,270 79
For dividends on stock		623,800 00
For all other payments		390,608 87
Total payments		$8,386,578 17

ACCIDENTS.

	—Roads operated.— Steam.	Horse.
Number of passengers killed	78	3
Number of passengers injured	178	65
Number of employees killed	77	1
Number of employees injured	100	1
Number of others killed	147	9
Number of others injured	86	24
Total number killed	302	13
Total number injured	358	90

DEDUCTIONS FROM THE FOREGOING RESULTS.

If we exclude the City Roads, we have as follows:

Average number of miles traveled by each passenger	35.70
Average number of passengers in each year	70.81
Average number of miles each ton of freight was transported	109 39
Average number of tons in each freight train	105 82
Aggregate movement of passenger trains is equivalent to passage over the road	3,044
Aggregate movement of passerger trains is equivalent to passing over the entire single track	1,804
Aggregate movement of freight trains is equivalent to passing over the road	4,048
Aggregate movement of freight trains is equal to passing over the entire single track	2,399
Average number of trains passing daily over the road, about	19½
Average number of trains passing daily over the entire single track about	11½
Average cost, per mile of road, for maintaining roadway	$4,281 13
Average cost, per mile of road, for repairs of machinery	2,453 13
Average cost, per mile of road, for operating road	4,993 69
Average cost, per mile of single track, for maintaining roadway	2,536 78
Average cost, per mile of single track, for repairs of machinery	1,453 60
Average cost, per mile of single track, for operating road	2,960 95
Average sum received for carrying one passenger one mile	2.2574 cts
Average sum received for transporting one ton of freight one mile	2.4128 cts
Average number of miles of travel for each passenger killed	8,436,904
Average number of miles of travel for each passenger either killed or injured	2,621,826
Average number of passengers carried for each one killed	236,337
Average expense is 72.38 per cent. of all the earnings.	

Deductions from the reports of several of the principal companies, showing the average sum received per ton per mile, and the average cost per ton per mile, for transporting freights:

	Average per ton per mile. Rec'd for transpt'g Cents.	Cost of transpt'g Cents.
Buffalo and Erie Railroad	3.46	2.63
Erie Railway	1.92	1.35
Hudson River	3.36	2.45
New York Central	2.59	1.64
New York and Harlem	7.62	5.78
Ogdensburgh and Lake Champlain	2.66	2.04
Oswego and Syracuse	4.49	3.52
Rome, Watertown and Ogdensburgh	3.58	3.24
Syracuse, Binghamton and New York	1.53	0.89

MILES OF ROAD OPENED DURING THE YEAR.

Albany and Susquehanna, 17 miles; Black River and Woodhull, 7.50 miles; Buffalo, Corry and Pittsburg, 6.50 miles; Buffalo and Washington, 16.03 miles; Long Island, 6 miles; Middleburgh and Schoharie, 5 miles; Middletown, Unionville, and Water Gap, 7 miles; Skaneateles, 5 miles; South Side, 53 miles; Utica and Black River, 9.70 miles; Utica, Chenango and Susquehanna Valley, 31 miles; Whitehall and Plattsburgh, 15.56 miles. Total, 169.29 miles.

☞ The contract for building a railroad between Leavenworth and the terminus of the central branch of the Union Pacific Railroad, at Atchison, has been awarded to A. H. Waterman, for $250,000. This is exclusive of iron. The road is to be in running order by the first of September.

Western Maryland Railroad.

The following is an extract from the report of Wendell Bollman, Esq., President, showing the present financial condition of the company and the amount of money needed to complete and equip the road to Williamsport, a point on the Chesapeake and Ohio Canal, seven miles west of Hagerstown:

The company have at this time forty-five miles of continuous road in working order, and there is graded and otherwise prepared to receive the iron, the entire road between Baltimore and Hagerstown, with the excpetion of about one mile in eight different sections, and which, under the necessary means at hand, would be completed, and the entire road placed in running order, within four months from the resumption of active operations. The total amount required for this purpose, together with the additional seven miles to Williamsport will be as follows:

Graduation and bridges to Hagerstown	$321,577
Superstructure	350,000
Five locomotives	62,000
One hundred cars	72,000
Ballast	77,000
Water stations	12,000
Turn table	2,500
Hagerstown to Williamsport	175,000
Contingencies	15,000
Total amount	$997,077

The total liabilities of the company and its available assets are as follows:

First mortgage debt unendorsed b'ds		$400,000 00
Baltimore city endorsement		200,000 00
		$600,000 00
Second mortgage debt Baltimore city endorsement	$300,000	
Washington county endorse't.	300,000	
		600,000 00
		$1,200,000 00
Less amount in sinking fund		89,570 00
		$1,110,430 00
Preferred mortgage debt		600,000 00
		$1,710,430 00
Short loans secured by a pledge of preferred bonds		76,403 84
Bills payable (not secured)		17,730 51
Open accounts including balances due contractors and others		98,562 22
		$1,903,126 07
Assets:		
Preferred bonds in hypothecation with sundry persons	$208,000 00	
On hand	23,000 00	
Second mortgage bonds, Washington county endorsement hypothecated	2,500 00	
Uncollected subscript'n, Washington county	32,290 33	
Uncollected subscript'n, Frederick county	24,192 00	
Uncollected subscript'n, Baltimore city	1,140 00	
Balances in hands of agents for right of way and for payment of accepted drafts	7,207 66	
Cash in bank	4,159 73	
		297,489 72
Total present liabilities over assets		$1,605,636 35
If to this we add the amount necessary to complete the road		997,077 00
We have a total liability of the company, when the road is in complete running order to Williamsport, of		$2,602,718 35

RAILROAD SHARE LIST, including Mileage, Rolling Stock, Debts, Income, Dividends, &c., &c.

An *asterick* (*) occurring in the column headed "Rolling Stock" signifies that the cost thereof is included, in that headed "Railroad." A *dash* (—) across the column signifies "nil," and running *dots* (.....) signify "not ascertained." Land Grant Railroads are printed in "*Italics*." State-aid Railroads are distinguished by a "¶."

American Railroad Journal.

Saturday, April 10, 1869.

Stock Exchange and Money Market.

There has been an unusual activity in the Money line, since our last, and extraordinarily high rates have been exacted from borrowers both on call, and in the discount form, chiefly by private lenders, the banks having used very little of their balances from day to day, in anticipation of an early call for an exhibit of resources and liabilities, from the Comptroller of the Currency. The pressure was most severely felt on Tuesday and Wednesday when the range on demand loans was from 7 per cent. currency, and a commission of 1-16th per cent. on Government securities, to fully ¼ and even ⅜ per cent. a day and gold interest as the extreme prices on stocks. Much of the stringency has been ascribed to the manipulations of the market, in the interest of the operators at the Stock and Gold Boards for a reduction in ruling financial values. The real scarcity of currency with the city banks, who plead unusual poverty in this line, is also urged in partial explanation of the remarkable closeness of the market. The bank reserve of legal tender notes was reduced $2,058,744; their specie hoard, $1,335,829; and their deposit average $4,788,121, during the past week. The banks now control but 48½ millions of legal tender reserve, and about 10¾ millions of specie, making an aggregate of gold and greenbacks, of about 59¼ millions, as against over 82 millions in the middle of January. Their loan averages on the other hand are now about 262 millions as against 259 millions early in January. Their deposits are now down 175⅜ millions against over 197 millions at the close of January. Their daily clearances last week averaged nearly 139 millions, showing a further notable increase within the week. There has been a very limited inquiry for commercial paper, the governing rates on really good grades of which has been full twelve per cent. per annum. The country drain on the city banks has been in excess of the currency receipts of the banks from all sources, and it is thought that it will so continue for some time to come, in view of the legitimate requirements of the trade and industry of the Nation, which show an important growth, as compared with the Spring of 1868. The U. S. Sub-Treasury disbursed nearly eight millions more than it received, last week, closing with a cash reserve of $86,880,266, against $94,690,283 on the 27th ult. On the 1st inst., the Treasury Department controlled cash balances to the amount of $111,005,993, including $104,203,365 of coin, and $6,802,628 in currency. Of the coin reserve $82,530,865 belonged to the Government, and $21,672,500 to private depositors holding coin certificates against the U. S. Assistant Treasury in this city. The cash in the Treasury on the 1st of March, was $115,594,790, of which $98,741,261 were in coin, and $16,853,529 in currency. During March, the Department lost over ten millions of currency, while it gained about 5½ millions of coin. The 1st of April debt statement, as given to the public by Secretary Boutwell, was more detailed, full, and satisfactory than any preceding exhibit. It supplied a more complete classification of the debt, as on the books of the Treasury at the close of the month, without waiting, as heretofore, five or six days for distant returns. It also made a separation of the Public Debt, proper, from the currency bonds of the United States lent to the several Pacific Railroads, and upon which they are responsible for the accrued and accruing interest; and embraced a complete audit to the close of the month of the accrued interest upon the Public Debt proper, which accrued interest amounted on March 31st, to $39,308,916.

The specie reserve of the city banks is now $10,737,893, against $17,097,893 same time last year. The city bank deposits are now $175,325,789, against $180,956,846 week ending April 4, 1868. The legal tender reserve amounts to $48,496,359, against $51,709,706 same time last year. The circulation now stands at $34,816,916, against $24,227,108 same time last year. The loans are now $261,933,675, against $254,287,891 at this date last year. The Bank Exchanges at the Clearing House through the past week, averaged $139,637,282 a day, against a daily average of $139,997,747 the preceding week, and $121,785,000 the week ending with March 17, 1869. The current week's exchanges average about $142,449,973 a day. The city banks, last week, reported a further loss of $1,335,829 of specie, $4,788,121 of deposits, and of $2,058,744 of legal tender notes. They reduced their loans,

$1,975,914; and increased their circulation, $39,102.

National Bank notes to the amount of $136,860 were issued last week by the Treasury Department, making the total issue to 1,685 banks thus far, amount to $313,597,756, against $282,555,440 at the close of the fiscal year ending June 30, 1866. From the total issue is to be deducted the currency returned, including worn out notes, amounting to $13,785,923, leaving, with the existing 1,626 banks, (having an aggregate capital of $418,858,931,) an actual circulation at this date, of $299,811,833. The United States bonds held by Treasurer Spinner in trust for National Banks as security for circulating notes amount to $342,740,300; and for the public deposits, $32,428,350—making a total of $375,168,650. The Treasury Department last week redeemed and destroyed $574,780 of worn and mutilated fractional currency, and issued $295,208 of new. The outstanding amount of fractional currency on the 1st of April, 1869, was $36,719,912, against $36,781,548 on March 1, 1869, $35,511,127 on Feb. 1, and $34,215,716 on the 1st of January.

Secretary Boutwell has instructed the U. S. Sub-Treasurer at this port to make a qualified anticipatory payment of the May interest on the Public debt, and under those instructions, and the date of April 5th, Assistant Treasurer Van Dyck has given notice to this effect: "Coupons for interest due May 1, 1869, will now be received for examination, and the same will be cashed, if desired, on a rebate of the interest from the day of payment to May 1, at the rate of 6 per cent. per annum, in coin. Where twenty or more coupons are presented, they must be accompanied by a schedule, showing number and amount of each coupon."

The U. S. Sub-Treasury receipts, week ending with April 3, were $8,081,928, including $2,868,793 from customs duties; payments, $15,891,246, including $279,794 of coin interest; balance at the close of the week, $86,880,266, against $94,690,283, at the close of the preceding week, showing a decrease of $7,810,018. The business of the Office during the first two business days of the current week, was as follows: On Monday, receipts, $1,309,355, including $401,504 from customs; payments, $695,327 including $18,490 of coin interest. On Tuesday, receipts, $913,695 including $609,000 from customs and, payments $796,683 including $31,156 of coin interest. The balance at the close of business on Tuesday stood at $87,611,306, against $88,518,543 a week previous; and $94,762,700, on March 17, 1869. The aggregate receipts of the office in March were $40,051,331, including $13,241,405 from customs, aggregate payments, $40,897,476, including $3,698,831 of coin interest.

The outstanding amount of coin certificates on the 1st of April was $21,672,500 against $28,775,560, March 1; $32,659,520 on Feb. 1, and $27,036,020 on the 1st of Jan., 1869. The Sub-Treasurer at this port issued, last week, coin certificates to the amount of $307,100, and retired $2,728,793 through the receipts for customs. The coin certificates issued by the Sub-Treasury office, during March, reached $1,793,180.

Government revenues have been on a moderate scale, since our last, particularly in the line of excises. The customs have been yielding quite satisfactorily. The excises, last week, yielded about three millions; customs at the port of New York, $2,868,793 and at the outports about $935,000 (in coin) more, making the grand total income for the week equal to about $7,992,500 in currency. The total receipts of the National Treasury, from excises, during the fiscal year ending with June 30, 1868, were $191,180,564. The receipts from the same source, thus far in the current fiscal year, commencing with July 1, 1868, have been about 114 millions, according to the latest Washington advices.

A higher range has been made on Gold, by a more confident speculative movement, notwithstanding the money pinch. The extremes of the week have been 131¼@132, and the final quotation on Wednesday was 131¾131⅞. The customs demand has been up to a full average of about half a million per day, thus aiding the speculative interest. The export inquiry has been of little moment. It absorbed only about $556,000 last week, most of which went to Havana, including $437,700 in Spanish doubloons. On Tuesday of the current week, the shipments were only $12,000. On the other hand, the imports of foreign specie last week, were $760,343, including $419,430 by the *Saxonia* from Havre, and $159,720 by the *Deutschland* from Bremen. The city banks now hold a specie reserve of only 10¾ millions, against over 17 millions same time last year.

The Gold Exchange Bank clearances on Wednesday, were $41,092,000, and the resulting balances $1,622,798 in coin, and $3,127,504 in currency.

The average amounts of the Gold Exchange Bank loans and discounts last week was $1,297,851, average amount of specie $564,815, average amount of deposits $1,092,775.

The customs demand for Gold last week, averaged $478,132 a day; thus far, this week, it has averaged $555,252 a day, or equal to a weekly aggregate of $3,331,512. The arrivals of specie from Europe, Havana and other foreign ports, during the week were $760,343, and since Jan. 1, $4,372,053, against $1,796,025 same time in 1868. The receipts from California, last week, were $350,619. The total customs revenue of the Government, in coin, at this port, from July 1, 1868, to date was $96,077,182, against $86,632,202 same time in the preceding fiscal year. At San Francisco, from Jan. 1, to Feb., 27th 1869, $1,062,192, against $1,195,059 same time last year.

The total receipts of California gold at this port, since July 1, 1868, have been $16,576,047, against $25,606,487 same time in fiscal year 1867–'68, showing a decrease in the current fiscal year, of $9,030,440. The exports of specie, from this port, last week, were $555,585, against $1,281,052 same week last year; total, since July 1, 1868, $31,090,613, against $43,519,475 in 1867–'68. Government disbursed last week through the U. S. Sub-Treasury here, on account of the coin interest on the public debt $229,794; since July 1, 1868, $66,954,177, against $54,451,162 same time in 1867–'68. The specie exports from San Francisco, from Jan. 1, to March 10, 1869, were $7,721,269, against $7,034,562 same time in 1868.

There has been more inquiry for Foreign Exchange, and a little more firmness has been noted in rates, but the later dealings exhibited less buoyancy, partly owing to the activity in money. Bankers' prime sixty day bills on London closed on Wednesday at 107¾@108⅛, and on Paris to 5.26¼@5.22½; sight bills on London to 108⅜@108¾, and on Paris to 5.21¼c.@5.20. The offering of produce bills has been more extensive this week. The week's exports of domestic produce and miscellaneous goods from this port have been to the currency value of $8,878,954, against $4,731,689 same week last year; total, since July 1, 1868, $123,714,272, against $139,476,342 same time in preceding fiscal year of 1867–'68.

Notwithstanding the Money pressure, there has been more doing in Government securities, largely on speculative account, and prices have been advanced, though the fluctuations have been quite frequent. The last debt exhibit, to April 1st, showed a net reduction during March, of $2,592,359 on the general account, and $5,507,359 in the debt proper, of the United States. Had the present statement been delayed, like its predecessors, to the 5th or 6th of the new month, so as to bring in the accounts of Customs and tax receipts from the principal offices to the close of March, the decrease, in place of about two and a half millions, would probably have been much nearer ten millions. But this difference will be equalized on the succeeding statement of May 1. The coin bearing debt on the 1st inst., was $2,107,876,650, including $514,771,600 of the Five-twenties of 1862, $1,087,838,350 of the later issues of the Five-twenties, $283,677,400 of the six per cents of 1881; $194,567,300 of the Ten-forties; and $27,022,000 of the old Five per cents of 1871–'74. The Three per cent. Legal Tender Certificates outstanding on the 1st inst., were $54,605,000. The Navy Fund loan stood at $14,000,000. The non-interest bearing debt was $420,416,888. The loans to the Pacific Railroads reached $56,852,000, showing an addition of $2,915,000 to this item, during March. The latest dealings in the public funds on Wednesday showed increasing firmness.

U. S. sixes of 1881 closed here on Wednesday at 115¾@116; U. S. Five-twenties of 1862, 119¼@119⅜; U. S. Five-twenties of 1864 at 114⅝@114¾; U. S. Five-twenties of 1865 at 116¾@116¾; U. S. Five-twenties of 1865, consolidated, 113½@113⅝; U. S. Five-twenties of 1867, 113½@113⅝; U. S. Five-twenties of 1868, 113½@113⅝; U. S. Ten-forties at 105½@105¾; U. S. Six per cent. currency bonds, 103½@103¾.

The latest quotations at the London Stock Exchange compare as follows with former returns:

	Mar. 24.	Mar. 31.	April 7.
Consols	93⅛	93⅛	93⅛
U. S. 5-20's of 1862...	83⅜	83¾	83⅝
Erie	24⅛	24¾	24¼
Ill. Central	97	96¾	96¾

A very strong and buoyant market has been noted for railway and miscellaneous share property, nearly all through the week, on a decidedly active speculative inquiry, in defiance of the adverse influence of the extraordinarily stringent Money Market.

General business has been variable in amount, from day to day, in the leading branches, influenced to a considerable extent, by the monetary closeness, which has had an unfavorable effect, as a rule, on current values. Cotton, breadstuffs, and provisions, petroleum and naval stores have been quoted cheaper, in most instances. Wool has been much depressed. Middling upland cotton closed steadily on Wednesday at 28½ cts.

per lb. The stock of cotton now here is estimated at about 118,500 bales. The receipts at the port this week, have averaged about 2,100 bales a day. The receipts at all the ports, since Sept. 1, 1868, have been 1,924,000 bales, against 1,941,000 bales same time in 1867–'8; exports, same time 993,000 bales, against 1,281,000 bales same time in 1867–'8; stock on hand at latest dates, 410,000 bales, against 324,000 bales same date 1868. Total crops of 1867–'8, 2,430,893 bales; total receipts at ports year ending Sept. 1, 1868, 2,240,282 bales; total exports thence, same time, 1,657,015 bales. The exports of domestic cotton goods from this port, since Jan. 1, have been 6,530 pkgs., against 3,791 pkgs., same time last year. From Boston, 3,179 pkgs., against 4,056 pkgs. same time in 1868. At the Live Stock markets, this week, Beeves have been in better supply and less demand at the reduced range of from 12@17c., per lb.; week's receipts, 7,172. Milch cows in more demand at $40@$110 each, receipts, 86. Veal calves in fair request at from 9@13c. per lb.; receipts, 1,217. Sheep and lambs slow of sale at 6@9c., per lb.; receipts, 21,770. Swine, dull at 10⅝@11⅛c. per lb.,; receipts, 14,124. Foreign goods have been generally in light request, the main exceptions have been coffee and tin, which have been in lively demand and firmer. Dry goods have been depressed. The total imports of foreign dry goods, last week, were $2,173,266, and the total amount marketed $2,286,776. The value of foreign merchandise imported last week, was $5,509,226—making the grand total specie value of last week's imports of dry goods and merchandise, equal to $7,682,492, against $5,701,225 same week last year; total since July 1, 1868, $202,780,849, against $178,337,378 in 1867–'8. Freights have been generally dull and weak. For Liverpool we quote flour at 1s. 3d. by sail, and 1s. 6d.@1s. 9d. by steamer, per bbl.; grain at 3d. by sail, and 3d.@3½d. by steamer, per bushel; cotton at ⅛d.@$\frac{3}{16}$d. by sail, and $\frac{3}{16}$d.@¼d. by steamer, per lb.; and heavy goods 12s. 6d.@25s. by sail, and 15s.@30s. by steamer, per ton. Total number of vessels in port on Wednesday, 533.

The New York exports, exclusive of specie, for the week ending April 6, and since the beginning of the year, compare as follows:

	1868.	1869.
For the week	$4,731,689	$3,878,954
Prev. reported	42,462,945	37,103,152
Since January 1	$47,194,634	$40,982,106

The imports for the week ending April 3, and since the beginning of the year, have been as follows:

	1868.	1869.
Dry goods	$2,067,307	$2,173,266
Gen. merchandise	3,633,918	5,509,226
Total for the week	$5,701,225	$7,682,492
Previously reported	55,627,198	69,684,862
Since January 1	$61,828,423	$77,367,354

The balance in the Sub-Treasury on Wednesday was $87,637,793 38.

The following quotations of sales of Railway and other securities are in addition to those given elsewhere in our columns:—

New York.—Am. Dock and Imp. 7s, 94; Dubuque and Sioux City 1st mort., 90; Toledo, Peoria and Warsaw 1st mort., W. D., 83; Long Dock bonds, 92⅛; Buffalo, New York and Erie 1st mort., 88; New Jersey Central 1st mort., 98; Long Island R. ☞ We invite special attention to the advertisement of Messrs. Morgan & Grossbeck, Stationers and Printers, on the front advertising page. Bankers and Brokers who do business in the vicinity, will find their store very convenient, as all articles in their line, such as Account Books, Drafts, Checks, &c., can be procured; also, Railroad men who wish Stationery for their counting rooms and offices can have their orders supplied at the shortest notice, and in a superior manner, for all articles pertaining to their business.

☞ A DESIRABLE INVESTMENT. ST. LOUIS, VANDALIA AND TERRE HAUTE RAILROAD CO. First Mortgage 7 per cent. Bonds. Twelve Thousand Dollars per mile Guaranteed by—The Terre Haute and Indianapolis Railroad Company. The Columbus, Chicago and Indiana Central Railway Company. The Pittsburg, Cincinnati and St. Louis Railway Company. The Pennsylvania Railway Company, for sale by LUDLOW THOMAS, 39 Pine street, New York.

☞ The Pittsburg and Connellsville Railroad Company will receive proposals until the 1st of May for the graduation, masonry and ballasting of the remaining forty-seven sections of this road, situated at intervals upon the ninety miles between Connellsville and Cumberland. See advertisement.

Imports of Dry Goods.

The imports of foreign dry goods at New York for the month of March, were:

ENTERED FOR CONSUMPTION.

	1868.	1869.

☞ The work on the Point of Rocks Railroad, which, when completed, will bring Hagerstown in direct communication with Washington city, is progressing at different points on the line, but not with such rapidity, we learn, as will insure its

completion within the next year, as was at one time anticipated.

Journal of Railroad Law.

RAILROADS—CONNECTING LINES—THROUGH PASSENGERS TICKETS, LIABILITY FOR BAGGAGE.

The facts in the late case of Candee *vs.* The Penn. R. R. Co., (21, Wisc., 582) are clearly stated in the following opinion by

COLE, J.—It is alleged in the complaint that the several railroad companies therein mentioned formed one continuous and connecting line of road for the transportation of passengers and baggage from the city of Milwaukee to the city of New York; that by virtue of an arrangement existing between these companies, each company issued and sold tickets for the transportation of passengers and baggage, which were good over the roads of the other companies; that at the city of Harrisburg there is a railroad branching off from the defendant's road and running to New York by the way of Allentwon, and commonly known as the "Allentown line;" that by reason of some arrangement existing between the defendant and the operator of the "Allentown line," tickets for the transportation of passengers and baggage over the defendant's road were equally good over the "Allentown line." It is further alleged that abont the 22d of February, 1865, the plaintiff purchased from the Chicago and Milwaukee Railway Company a coupon ticket issued by that company, paying therefor the then established rate for one first class passage from Milwaukee to to the city of New York; that she had the option of using her ticket over the "Allentown line," instead of going by the way of Philadelphia, that she delivered her trunk to the Chicago and Milwaukee Company at Milwaukee, receiving therefor a through check for the trunk to the city of New York by way of the "Allentown line." It is further averred that when the plaintiff arrived at the city of Harrisburg, on the defendant's road, where the "Allentown line" branches off, she determined to go by way of Philadelphia, instead of going over the "Allentown line," that thereupon the defendant company took up the check which the plaintiff had received for her trunk from the Chicago and Milwakee Company and gave in exchange therefor a through check from Harrisburg to New York by way of Philadelphia. It is stated that at the time the trunk was rechecked at Harrisburg, the plaintiff was informed and believed that the same was in good order, but that when it arrrived at New York the lock had been broken, and the articles there mentioned had been taken therefrom. It is not, however, alleged that the defendant company was guilty of any negligence on its part in transporting the trunk over its road; nor that the loss happened while the trunk was in the possession of that company or under the control of its agents and employees. The question, therefore, arises upon these facts, whether a cause of action is stated against the defendant.

It appears to us that there is not enough set forth to show that the defendant is liable for the value of the articles lost. According to our understonding of the matter, the ticket and check given by the Chicago and Milwaukee Railway Company imply a special undertaking by that company to safely transport and carry, or cause to be safely transported and carried, the plaintiff and her baggage over the roads mentioned in the complaint, from Milwaukee to the city of New York. This, we think, must in legal contemplation be the nature and extent of the contract entered into and assumed by that company when it sold the plaintiff the through ticket, gave a through check for the trunk, and received the fare for the entire route. This is the doctrine of the case of the Illinois Central Railroad Company *vs.* Copeland 42 Ill., 332, and we are disposed to follow it as laying down a safe, sound and reasonable rule on this subject. In the case of Peet *vs.* Chicago and Northwestern R.R. Co., 19 Wis., 118, court affirmed an analogous principle, by holding that where a railroad company contracted as a carrier to transport goods for a whole line, it became liable for an injury which might happen to them beyond the terminus of its own road, while under the control of other carriers. So here. The Chicago and Milwaukee Company received the whole passage money from Milwaukee to New York city—fare which covered the carriage of both the plaintiff and her baggage safely to the latter city. It assumed to give a through check for the trunk, and a through ticket which entitled the holder to a first class seat in the cars passing over the successive roads. It seems to us, therefore, perfectly reasonable and proper to hold that company to the full measure of liability assumed by it in its contract, and to say that it is liable for losses happening beyond the line of its own road. It was contended by the counsel for the appellant, that the facts do not show even a contract on the part of the Chicago and Milwaukee Company to transport the plaintiff and her baggage for the entire route; that the tickets issued by it should rather be regarded as distinct tickets for each road, sold by that company merely as agent for the other companies; and that each company is only liable for such losses as happen on its own road. But it is very obvious that this rule would at once destroy all the convenience and benefits of the through ticket system, since it would impose upon the passenger the necessity of both looking after and examining the condition of his baggage at the terminus of each road; otherwise it would be impossible for him to prove where the loss occurred. We deem it a better rule to hold, that the Chicago and Milwaukee Company by issuing the through ticket and check, contracted to carry the plaintiff and her baggage the entire route. Had the complaint alleged that the loss happened in consequence of the negligence of the agents and employees of the defendant company, and while the trunk was being transported over its road, then, perhaps, the action might be maintained, notwithstanding the undertaking of the first company. But there is no such averment in the complaint.

It seems to have been supposed that the defendant company rendered itself liable for the loss in this case, because at Harrisburg it took the baggage check originally given by the Chicago and Milwaukee Company, and gave its own through check for the trunk to New York, by the way of Philadelphia. But this exchange was made simply in accordance with the terms of the contract entered into at Milwaukee. By that contract, the plaintiff had the option of using her ticket over the "Allentown line," or to go by the way of Philadelphia. True, her trunk had been checked by the way of Allentown; yet when she reached Harrisburg, she had the privilege of electing whether she would pass over the "Allentown line" or go the other route. She contracted for this option in the first instance, and therefore surrendering the check which she had received from the Chicago and Milwaukee Company, and taking the defendant's check in exchange, was but carrying out this understanding and agreement. But we do not think the effect of this transaction was to change the relation of the parties, by either restricting or enlarging the liability of the defendant company, any more than though the trunk had been originally checked by the Philadelphia route.

In anticipation that we might hold, upon the facts stated in the complaint, that the defendant contracted to carry the plaintiff's trunk beyond its own road to the city of New York, the counsel for the appellant contends that the defendant had no power to make such a contract. This objection, that a railroad company cannot incur liability beyond its own route by an express contract, is overruled by what has already been said in ihts opinion, as well as by what (if not expressly) is at least by implication decided in Peet *vs.* Chicago and Northwestern R. R. Co., *supra*. It is unnecessary to enter upon any discussion of this question at this time. The remarks already made dispose of this appeal. My own opinion, however, is, that the great weight of authority, not only in England but in this country, hold that it is competent for a railroad company to contract for the transportation of passenger and goods beyond the terminus of its road, and I am disposed to follow these decisions. But I leave the discussion here for the present.

It follows from the views we have expressed, that the order of the circuit court overruling the demurrer to the complaint must be reversed, and the cause remanded for further proceedings according to law.

DOWNER, J.—I concur in the opinion that the defendant corporation is not liable unless the loss occurred while the baggage was in its custody; but I express no opinion as to the liability of the corporation issuing the ticket for losses on the roads of the other corporations.

By the court.—Order reversed, and cause remanded.

Fredericksburg and Gordonsville Railroad.

We learn that the construction of this road was commenced on the 31st ult., at Fredericksburg, and the prospects are that it will be speedily completed to its terminus at Charlottsville *via* Orange Court House. This, by the laws of Virginia, will be the ruling road to tide water for heavy traffic to Eastern ports from the west and southwest. The work is under the charge of H. H. Waynright, of Philadelphia, assisted by Colonel W. W. Taylor, of Baltimore, as chief engineer.

☞ The earnings of the Great Western Railway of Canada for the month of January, 1869, were $339,060 69; the expenses, $198,681 78; and the net earnings, $140,378 61. In January, 1868, the earnings were $273,031 80; the expenses, $169,061 83; and the net earnings $104,869 97—showing an increase in earnings of $65,128 59; in expenses of $29,619 95; and in net earnings of $35,508 64.

Lake Superior Iron Trade.

The Marquette *Mining Journal*, of March 10th gives the following statement of the quantity of charcoal pig iron made in the Lake Superior region in 1868, also the quantity and estimated value of the ore and pig product for each year since 1856:

The following table exhibits the total product of the furnaces for the year 1868:

	Gross tons		Gross tons.
Pioneer	9,500	Bancroft	3,500
Northern		Champion	4,282
Collins	4,268	Jackson	4,169
Michigan	4,383	Schoolcraft	1,735
Greenwood	1,806	Deer Lake	600
Morgan	4,203		
Total			38,246
Product 1867			30,911
Increase			7,335

Total value of product for 1868, in market, $1,453,348.

The following is a statement of the total product of the Lake Superior furnaces, since the first iron was made in 1858:

	Gross tons.		Gross tons.
Pioneer	38,072	Bancroft	23,034
Northern	15,068	Champion	4,282
Collins	25,828	Jackson	4,169
Michigan	8,313	Schoolcraft	1,735
Greenwood	12,218	Deer Lake	600
Morgan	20,891		
Total			154,220

The following is a comparative statement of the prduction of ore and pig iron in this district from 1856 to 1868, inclusive:

Year.	Iron ore.	Pig iron.	Ore & Pig.	Value.
1856	7,000	.....	7,000	$28,000
1857	21,000	.....	21,000	60,000

☞ The following gentlemen have been elected directors of the Panama Railroad Company for the ensuing year: William H. Aspinwall, Joseph W. Alsop, James M. Brown, Henry Chauncey, Edward Cunard, Frederick G. Foster, David Hoadley, Gouverneur Kemble, Charles P. Leverich, Howard Potter, David Stewart, Theo. W. Riley, William Whitewright, Jr.

Railroad Law of Ohio.

The following is a correct copy of the Law recently passed by the Legislature of Ohio empowering foreign railroad corporations to lease or purchase and operate railroads within that State. It is known as the "Stickney Railroad Bill:"

AN ACT to amend section 24 of an act entitled "An act to provide for the creation and regulation of incorporated companies in the State of Ohio," passed May 1, 1852. [Swan & Critchfield, pages 231 and 282.]

SEC. 1. *Be it enacted, &c.*, That section 24 of the above entitled act be amended to read as follows:

SEC. 24. Any railroad company heretofore or hereafter incorporated, may at any time, by means of subscription to the capital of any other company or otherwise, aid such company in the construction of its railroad, within or without the State, for the purpose of forming a connection of said last mentioned road with the road owned by the company furnishing said aid; or any railroad company organized in pursuance of law, either within this or any other State, may lease or purchase any part in all or any railroad, the whole or a part of which is in this State, and constructed, owned or leased by any other company, if said companies' lines of said road are continuous, or connected at a point either within or without this State, upon such terms and conditions as may be agreed on between said companies respectively, or any two or more railroad companies whose lines are so constructed may enter into any arrangement for their common benefit consistent with and calculated to promote the objects for which they were created.

Provided, That no such aid shall be furnished nor any purchase, lease, sub letting or arrangement perfected, until a meeting of the stockholders of said company of this State, party to such agreement, whereby a railroad in this State may be aided, purchased, leased, sub-let or effected by such arrangement, shall have been called by the Directors thereof, at such time and place, and in such manner as they shall designate, and the holders of at least two-thirds of the stock of such company represented at such meeting, in person or by proxy, and voting thereat, shall have assented thereto.

And provided further, That if a railroad company of another State shall lease a railroad, the whole or a part of which is in this State, or make any arrangement for operating the same, as provided in this act, such part of said railroad as is within this State shall be subject to taxation, and shall be subject to all regulations and provisions of law governing railroads in this State, and such other provisions of law as have been, or may hereafter be, enacted for the Government of such railroads as do, or shall, by consolidation, or any of the other means provided by laws, form part of a continuous line of road from a point in one of the States of the United States into this State, or through this State to a point in another State; and a corporation in this State leasing its road to a corporation of another State, shall remain liable to all parties as if it operated the road itself; and a corporation of another State, being the lessee of a railroad in this State, shall likewise be held liable for any violation of the laws of this State, and may sue and be sued in all cases, and for the same causes, and in the same manner as a corporation of this might sue or be sued, if operating its own road; but a satisfaction of any claim or judgment by either of said corporations shall discharge the others, and a corporation being the lessee, as aforesaid, shall establish and maintain an office in this State, at some point on the line of the railroad so leased, at which legal process and notice may be served, as at the general office of a railroad company of this State.

Provided, further, That it shall be regarded as one of the conditions upon which a railroad company of another State may lease or purchase a railroad, the whole or any part of which is in this State, or make any arrangements for operating the same, under the provisions of this section, that such railroad company of another State thereby waives the right to remove any case from any of the Courts of this State to any of the Courts of the United States, or to bring a suit in any of the Courts of the United States against any citizen of this State, and a violation of such condition shall operate as a forfeiture of all rights acquired under such lease, purchase or arrangement.

SEC. 2. That said original section 24 be and the same is hereby repealed; and this act shall take effect on its passage.

F. W. THORNHILL,
Speaker of the House of Representatives.
T. J. GODFREY,
President pro tem. of the Senate.

Passed March 19, 1869.

Oil Creek and Allegheny River R. R.

The acquisition of the Oil Creek and Allegheny River Railroad by the Philadelphia and Erie Railroad Company, puts the latter in connnection with the Allegheny Valley Railroad at the mouth of Oil reek, and, by the Allegheny Valley Railroad, in communication with the Western Pennsylvania Railroad at Kiskiminitas, with the Pennsylvania Railroad at Pittsburgh and the Blairsville Intersection, also with the Pittsburgh, Fort Wayne and Chicago Railroad in Allegheny City. And so soon as a bridge shall have been built across the Allegheny river at Oil City, cars can be interchanged between the Pennsylvania Railroad and the Philadelphia and Erie Railroad. And exactly as east of the Allegheny mountain intercommunication is established between roads at Lock Haven and Tyrone by the Bald Eagle Valley Railroad, so west of the Allegheny mountain intercommunication will be established between the Philadelphia and Erie Railroad and the Pennsylvania Railroad at Oil City, at Kiskiminitas, and at Pittsburgh, by the Allegheny Valley Railroad. Not only, therefore, will the acquisition of the Oil Creek and Allegheny River Railroad give the Philadelphia and Erie Railroad its equitable share of eastward bound oil and also of the miscellaneous traffic for and from oildom, but it will at the same time tend to *weld* the Allegheny Valley Railroad to its connections at Oil City, Kiskiminitas and at Pittsburgh, making it in fact a link in the great *Pennsylvania quadrilateral* which fortifies the Juniata and the West Branch on the south and north, the Susquehanna and the Allegheny on the east and west, covering the only two naturally eligible and economically available routes east to Philadelphia and New York and west to the Ohio river and Lake Erie.

How the Philadelphia and Erie Railroad Company happened in funds to make the purchase of 43,000 shares of Oil Creek and Allegheny River Railroad Company's stock, is easy of solution.

In 1867 the Pennsylvania Railroad Company converted $2,400,000 Philadelphia and Erie seven per cent. bonds into 48,000 Philadelphia and Erie preferred capital shares, whereupon the Philadelphia and Erie Railroad Company became repossessed of the amount of loan so returned to their coffers, and which was opportunely available for reissue, in a most important negotiation. The price paid for the Oil Creek and Allegheny Railroad stock was, we believe, forty dollars per share, in bonds at par.—*U. S. R. R. and Mining Register.*

Emmittsburg Railroad.

We are informed, says the Gettysburg *Compiler*, by a friend at Emmittsburg, that the prospects of the contemplated railroad are very cheering—that the work of taking subscriptions goes on bravely, and that all are taking a lively interest in the success of the undertaking. He also informs us that considerable interest has recently been awakened at Frederick in favor of building the Frederick and Pennsylvania Line Railroad to the point where the Emmittsburg Branch shall strike the Western Maryland thus securing an immediate connection with Emmittsburg, and, ultimately, a

through route to Harrisburg *via* Gettysburg. There is also a talk of a railroad direct from Frederick to Washington.

Kent County Railroad.

The Chestertown *Transcript* says that Mr. J. Mahony, of Delaware, has agreed with the Kent County Railroad Company to complete the grading, track-laying and ballast from Massey's as the line is now located, by way of Kennedyville, Belair and Rees Corner to Deep Landing 28½ miles, and also the branch to Chestertown, 4.39 miles.

The grading is to be commenced by the 10th of April, with sufficient force to complete the grading to Belair by the 1st of December next, and the balance of the road and branch by July 1st, 1870. The track-laying is to be commenced at Massey's as soon as the company furnish the material, and the track to be completed to Kennedyville in sixty days more, provided there is no delays for materials.

These are the general features of a contract which is likely to be executed in a few days, provided the graduation be confined to the section fram Massey's to Kennedyville, and on that part of section three from Kennedyville to Parrott's until the road shall be completed down to Kennedyville.

Cairo and Fulton Railroad.

A letter from Mr. Brayman, Esq., President of this company, dated March 13, 1869, addressed to Hon. J. M. Johnson, President of the Senate, says:

In anticipation of the present condition of things, application was made to congress by this company for an extension of the time fixed in the act of congress of July 28, 1866, for the completion of the first twenty miles of railroads.

I have to advise you that before the close of the fortieth congress a joint resolution was, through the attention of Hon. B. F. Rice, and the Hon. L. H. Roots, accepted, whereby the lands of the company are safe from loss to the state, should this company be unfortunately prevented from completing twenty miles within the time first required.

☞ The Toledo *Blade* says that the Sandusky, Mansfield and Newark Railroad has been leased by the Baltimore and Ohio Railroad Company for ninety-nine years, the latter to take possession on the 1st of May. The object is to form connections, *via* Toledo, with Michigan roads, and with this object in view, negotiations are now pending for the right of way from Monroeville to that city—the connecting link to be built if satisfactory arrangements cannot be made with the Lake Shore Company for the use of their line running into Toledo.

☞ The Westminister *Advocate* says that the Western Maryland Railroad is at the present time in a much better condition than it has been for years. The Superintendent, P. H. Irwin, Esq., is indefatigable in his labors; the bridges are being braced, new ties and rails laid, and the greater portion of the road is being ballasted, which, together with the other improvements contemplated, will soon make the road in first-class order, and in a short time it will be opened to Hagerstown.

☞ A meeting of the citizens of Ontario, Yates and Steuben counties, was held recently at Rushville, to take measures for the construction of a railroad from Geneva to Salamanca, suppyling the connection between the New York Central and the Atlantic and Great Western Railroads, and considerably shortening the line of travel from Albany or Boston westward. The proposed line leaves the New York Central (Auburn branch) at Geneva, running southwardly up the Flint Creek Valley to Rushville, thence along the valley to Naples, thence to Dansville, and up Whitney Valley, until it strikes the main line of the Erie Railway, thence westerly to Salamanca.

PRATT'S
PATENT COMPENSATING FISH-JOINT,

MADE BY

VERREE & MITCHELL,
IRON AND STEEL MANUFACTURERS,
No. 939 North Delaware Avenue, Philadelphia, Penn.

COMBINES MORE ADVANTAGES THAN ANY FISH-JOINT HERETOFORE INTRODUCED.

This Joint is made of two heavy bars of wrought iron, or cast steel, sixteen inches in length, or any other desired length, fitted to the side of the rail and secured by four three-quarter inch bolts, with four malleable cast-iron cups and washers, and a gum ring two inches in diameter and half an inch thick, in each cup.

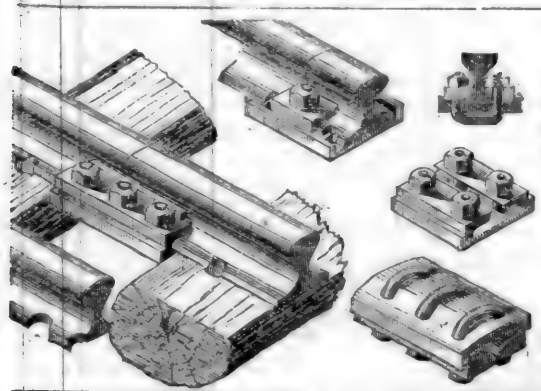
The value of gum to absorb jarring motion is well known; but when the pressure is as great as that required to secure the ends of railroad rails, some device, or method by which to prevent the gum from being forced out from under the washer, when subjected to increased pressure, is indispensable. The PATENT COMPENSATING FISH-JOINT secures that effect and enables Railroad Managers to apply all the force and pressure desired.

Where this Joint is securely fastened by screwing the nut upon the washer and gum in the cups with a lever three feet in length, it makes a perfectly tight joint, and thus secures what Railroad Managers have long desired—*a continuous rail*, with sufficient elasticity in the gum to relieve from and compensate for the sudden jar, and at the same time allow for expansion and contraction by heat or cold.

We confidently claim for the PATENT COMPENSATING FISH-JOINT:

That it makes the best and cheapest form of fastening, requiring no plate or chair underneath the foot of the rail.

That it is safe and secure, and prevents the numerous accidents resulting from loose or broken rails.



That this Joint absorbs the vibratory shock given by the wheels in passing over the ends of rails, and thereby preventing fracture; and we have yet to hear of the first rail having been broken with our Joint on it.

That it can be applied in repairing and relaying with the least trouble and delay.

That the materials are indestructible, and make A PERFECT AND CONTINUOUS RAIL, thus securing what has long been desired, and what all previous experiments have failed to attain.

The Manufacturers can supply these Joints, complete in all their parts, ready to be fastened to the rails with dispatch.

Refer to all the Leading Railroads in the Country.

Railway Accidents—Destruction of Life and Property by Fire.

We find in the Washington *Chronicle* a description of an invention, recently patented by Messrs. George S. Koontz of Washington, and Edward Potts and McLeod D. Lewis of Baltimore, designed to prevent loss of life and property by fire in case of accident. Their invention, as described by the *Chronicle*, consists of a fire extinguisher, applicable to any car stove, so arranged that the furnace shall be in ready communication with a vessel containing water. Through the top of this vessel is a rod, connected at its lower end with a valve, and at its upper end with a chain attached to a ball, resting within a ring, and supported by braces. In cases of collision or overturning, or partial overturning of cars, or like accidents, the ball, prepondering the chain, rods, and valves in the chamber pipe, will roll from the ring and raise the valves so that the water in the chamber will be thereupon discharged into the furnace, thus instantly extinguishing the fire therein, and obviating the possibility of damage or loss of life by fire. A jacket, forming a chamber, is made to surround the furnace for the purpose of heating air, to be conveyed to the interior of the car, equalizing the heat therein, by means of a pipe connecting with and extending from the rear of the air-chamber through the car floor, for the conveyance of cold air. A double advantage is thus afforded—first, in the prevention of fire in cases of accidents, and, second in the equalization of heat throughout the cars. The latter feature, desirable as it is, however, is not so important as the "extinguisher," which can be readily applied to any car stove, at little cost, by simply changing the upper plate. The device is very simple in all respects. Practical railroad men who have examined it with much interest pronounce it superior to anything yet presented for the accomplishment of its important purposes.

A Freight Railroad.

The following is an extract from a letter written by Joseph H. Moore, Esq., Freight Agent, of Chicago, to the Superintendent of the Pittsburg, Fort Wayne and Chicago Railway, in which he advocates a plan for the reduction of freight by rail, being no less than the construction of a freight railroad from Chicago to New York. He expresses the opinion that such a road can transport the three classes of freights now sent by lake and canal to New York, at an average rate of six miles an hour, at the cost of $7, $8, and $9 per ton during the season of navigation, and during the winter months at the rates of $9, $10, and $11 per ton. The average freight on wheat, corn, and oats from Chicago to New York *via* Buffalo, by lake and canal during the past season, has been $8 per ton. Mr. Moore's letter closes with the following remarks:

To successfully work a railroad, where the tonnage is very large, it should be provided with a double track for freight trains and another for passenger trains, and the freight should be worked at a slow rate of speed—say six or eight miles an hour, with engines especially adapted to such speed. Under an organization of this kind a single line between Chicago and New York would transport more than five times the railroad and lake tonnage for the year under consideration. The trains can be safely worked within fifteen minutes of each other, giving ninety-six trains a day from Chicago, of 300 tons each for 300 days in the year, total 8,640,000 tons. This traffic at $9 per ton, on the average, will amount to $77,760,000, and estimating west bound receipts the same we have total income, from a single line, of $155,520,000, of which our company would be entitled to $80,870,400. To economically transport this immense tonnage 30,000 freight cars, at a speed of eight miles the hour, and 35,000 at six miles the hour, and 3,000 locomotive engines, would be required. The receipts per train per mile would average $3 from Chicago to New York *via* Pittsburg. These items of tonnage and earnings multiplied by four, the number of railroad lines from this city to New York, Philadelphia and Baltimore, give an aggregate of 96,120,000 tons, counting both east and west tonnage, producing an income annually of $622,080,000. All this I mention to show that railroad lines may be worked, when the tonnage is large, so as to entirely supersede water carriage when lakes, canals and rivers must be used between the termini of a long route; and that the capacity of a single line of railway is equal, if not superior, to that of five canals, in this latitude, as the speed of the trains would be three times that of canal boat movement during the season of navigation, with the five months' winter tonnage in favor of the all rail lines.

Pacific Railroads.

The joint resolution, which recently passed Congress, for the protection of the interests of the United States, in the Union Pacific Railroad Company and the Central Pacific Railroad Company, and for other purposes, was approved and signed by the President on the 10th inst. It authorizes the company to hold a meeting at Boston, April 22, 1869, to elect a board of directors and determine on a place for the location of their general office. Directs that the Union Pacific and the Central Pacific roads meet at Ogden. Authorizes the President to appoint a disinterested committee to examine the condition of the two roads, to be paid $10 per day. Directs the Attorney General to institute such proceedings as may be necessary to protect the interests of the United States in said roads. Directs inquiry also to be made whether both roads have not forfeited their charters, whether illegal dividends have not been declared, whether any of their directors have committed any penal act, and if so directs the Attorney General to institute proper proceedings for the protection of the United States.

☞ Henry R. Pierson Esq., of New York, has been chosen Vice President of the Chicago and Northwestern Railroad, to fill the vacancy made by the resignation of Perry H. Smith,

☞ Mr. C. E. A. Bartlett of Nashua has been appointed Treasurer of the Boston and Lowell Railroad.

Northern Central Railway.

The earnings of the Northern Central Railway and its Branches during the years ending December 31, 1867 and 1868, have been as follows:

	1867.	1868.

Canandaigua " .	216,568 96	243,184 23
Totals	$2,478,709 45	$2,962,327 52
Net revenue	$1,212,158 71	$1,189,024 39

Compared with the previous year the total gross earnings show an increase of $460,483 75, with an increase in operating expenses of $483,618 07—making the decrease in net revenue, $23,134 32.

The operating expenses of the road were 71.35 per cent. of the receipts, being 4¼ per cent. greater than in the year 1867. The increase of per centage is to be attributed to increased sidings; to the damage done to the lower end of the line by the flood which occurred on the 24th of July last; the repairs of which have been charged to operating expenses, and to the rebuilding bridges on the Shamokin Division.

These bridges when originally built being only adapted to the passage of coal cars, the change was rendered necessary to pass the box cars going to and from the Lehigh Valley Railroad connection with this line.

There have been moved in 1868, 3,138,319 tons of freight, against 2,356,312 tons in 1867—showing an increase in 1868, of 782,007 tons.

The large increase of gross receipts for the year does not show an equivalent increase of the net income. But the extraordinary expenses just referred to, together with the reduction of rates received for the tonnage moved, will account for the failure to realize the additional profit.

The average rate received for the transportation of freight was 2.22 cents per ton per mile, a reduction of 0.38 of a cent. per ton from the rates received the previous year. The same rates of freight upon the tonnage of 1868 as received in 1867, would have given us an additional net profit of $500,889 06. The reduction of rates has inured to the benefit of the consumer, and is the best evidence that can be given to show that the management of the road is not adverse to the interests of the public. At the same time the attraction of this increased tonnage to the line, we believe, has, and will, prove more advantageous to the stockholders than the policy pursued by many roads, and formerly pursued by this company, of charging higher rates and thus limiting the business to a smaller number of tons. The one policy attracts trade, which when once secured, becomes permanent, induces the growth of manufactories along the line, and increases both the trade and travel; while the other has just the opposite effect.

The tonnage has been only limited by the capacity of the equipment. Although large purchases were made during the last year of engines and cars, we were unable to meet the trade which was offered, and we have therefore been compelled to again make contracts for a large increase of rolling stock, which is to be delivered during the early part of this season.

The rolling stock of a line situated as this one is, having so many connections, with the great proportion of the trade originating on the line of the road and destined to points on other roads, must neccessarily have a larger proportion per mile than other lines differently situated. We loose the control of cars, and they cannot be made to perform the same amount of service as if we had the entire control of them. Another reason for the necessity of an undue proportion of equipment has frequently been referred to in previous reports, but is none the less true now, and that is the want of a connection with a shipping point on tide-water. Our trade is now confined to local points, is spasmodic, and cars must be kept to move it only as the demand springs up. If a shipping point was had the equipment could be used for that trade during the dull season of the local traffic. Every effort has been made by this company to remedy this want, but, so far, we have not been able to accomplish it, without an expenditure which the affairs of the company would not warrant. The Union Railroad Company promised to provide the facilities of this kind, but it has met with difficulties which has compelled it, at least temporarily to suspend work. The advantages to the City of Baltimore to be derived from the ability of this company to reach tide-water we believe is now thoroughly appreciated by the city authorities, and we have no doubt that means will be taken to have the work on the Union Railroad resumed and pushed forward to completion.

There has been a very large increase in the coal trade over the preceding year. The coal transported South in 1868 amounted to 602,025 tons, against 453,919 tons in 1867, an increase of 148,106 tons. Of this increase, 26,741 tons were carried to Baltimore, and the balance, 121,365 tons to local stations on this and connecting roads. The coal transported North to Elmira and points beyond, in 1868 was 131,677 tons, against 35,619 tons in 1867, an increase of 96,058 tons. We anticipate a further increase in this business during the present year.

As we anticipated in our last report, the business of the leased lines has increased largely with the exception of the Shamokin Division. The trade of this road has been somewhat affected by the completion of the Enterprise Railroad—a new road, owned and controlled by the Philadelphia and Reading Railroad Company. The increasing business to the Main Line will, however, render this Division in the future as in the past, a profitable investment for this company.

Last year we added to the equipment: 12 locomotives, 7 passenger cars, 100 box and stock cars, 125 eight-wheeled and 322 four-wheeled gondola coal cars, 7 eight-wheeled stone cars, 46 freight cabin cars, at a cost of $472,741 38. And we have contracted for, (to be delivered this year): 22 locomotives, 600 eight wheeled coal cars, 200 box cars, 20 stone and lime cars.

There has been put in the track 4,028 tons of new iron and 139,824 cross-ties. The track upon the entire line is in excellent condition, and the bridges and all appurtenances have been kept in good order. It was our intention, during the last year, to build a number of passenger and freight stations at different points where they were very much needed; but the extraordinary expenses to which we were subjected, compelled us to postpone doing any work of this kind. We hope to be able to build several during this year.

The entire right of way for the new line into the City of Baltimore, together with sufficient ground for new shops on the line of the road adjoining the city, has been purchased, and the work is now being prosecuted. This work, although costly, we could not postpone any longer. It had become almost an impossibility to handle the freight in the city over a single track with very heavy grades, and if the increase should continue this year in the same proportion as in the past we shall find great difficulty in disposing of it. It has also been our desire to put additional local passenger trains upon the line, but we have been prevented by the same cause. The new line will enable us to handle a very great deal more trade, and to do it at much less cost. The shops are as much a necessity as the new tracks, as those we have were built to accommodate the equipment of the road when the business amounted to one-fourth of its present proportions; it can readily be seen that we have been working at a great disadvantage. These improvements will require a large outlay of capital, but we are fortunate in this: that we will be able to sell the property occupied by the present shops for a sum almost, if not entirely, sufficient to cover the expenses of the contemplated improvements.

In 1865 it was determined upon to issue a six per cent. mortgage of $2,500,000 for the purpose of purchasing equipment, and making such improvements as might be required. This was done, and about one-half the bonds were sold. But, owing to the fact of its being a third mortgage upon the property, we found it difficult to use the remainder at a price we considered them worth; and finding too that improvements, which, at the time these bonds were issued, we thought could be postponed for some years, had now become imperatively necessary, it was deemed best to create a consolidated mortgage and withdraw the balance of the loan from the market. This has been done. A mortgage of $6,000,000, bearing six per cent. interest, payable in coin, free from taxation, has been created, and is to be issued only as the former bonds of the company are retired, either by purchase for the sinking funds, or by cancellation. A portion of the $2,500,000 has been retired and a like amount of the new bonds have been sold, and we are now offering a limited number of them at par and accrued interest.

With these bonds we shall be enabled to cancel the floating debt of the company, make the improvements which cannot be delayed, while the funded debt of the company will not be increased beyond its present amount, And, by the time this entire mortgage is issued it will be the first, and only mortgage, except the Annuity to the State of Maryland on your property.

The regular payments have been made to the sinking funds during the year. In the sinking fund for the redemption of the bonds due in 1885 there is now $431,000 of these bonds; and in the general sinking fund we have $252,000, an increase in both of $101,000.

The receipts and expenditures for the year ending December 31, 1868, were as follows:

Receipts.

From freights	$2,928,360 77
" passengers	914,760 04

Total		$268,809 66
From which deduct—		
Interest and exchange	$127,958 71	
Taxes, U. S. and State of Michigan	9,458 16	
Fuel on hand	15,000 00	
	152,416 87	
Balance December 31, 1868		$116,392 79

—which has been appropriated to the payment of interest due January 1, 1869, to construction, and to meet maturing floating obligations of the company.

The amount charged to construction for the year is $460,931 96; making the total of that account on 31st Dec., $2,609,249 72; also, on exhibit of the floating debt of the company, amounting, at the beginning of the year, to $102,361 43.

The funded debt consists of $1,495,000 first mortgage bonds, and $400,000 second; leaving $100,000 authorized, not yet issued, and it is hoped no further issue may be necessary, together with $40,834 57 mortgages for depot grounds and docks, at Saginaw City.

There are also unadjusted liabilities for docks and freight house at Wenona, construction contracts unfinished, &c., amounting, in the aggregate, to $50,000 or $55,000.

The capital stock is $548,605, to which should be added $84,000 for right of way, and preparing the road bed for iron, from Saginaw City to Wenona, as per contract not yet fully adjusted; making a total of $633,605 stock.

By the building of the road from Owosso to Wenona, the company has earned 192,000 acres of land, which amount has been duly certified to the company, quite carefully examined, and will be speedily appraised and offered for sale; the proceeds being pledged for the redemption of first mortgage bonds. The report says:

We have no doubt the business of the current year will be considerably more than the past, and feel safe in estimating its aggregate at not less than $450,000, which will not be sufficient to make such additions to equipment, in the way of rolling stock, additional sidings, station houses, &c., as will undoubtedly be necessary, together with operating expenses, interest, and other incidental expenses, and fully cancel the floating debt, a portion of which will require to be carried over into the next year.

The rolling stock of the company, which now consists of ten locomotives; six large, and four small passenger coaches; two large, and two small baggage cars; two mixed train baggage cars, fifty box, and one hundred platform cars, is quite adequate for our present business, except in passenger coaches, of which, two more will be needed; and with a natural increase in business, another engine, and a few freight cars, may be necessary.

As the past year is the first of its operations over the whole line, from Jackson to Wenona, 116 miles, our earnings have been heretofore entirely conjectural. We can now calculate with more confidence, and compare earnings with corresponding periods of the past.

It is proper here to allude to other similar enterprises, now under contract; the completion of which, it is confidently predicted, will greatly add to our business. First—from Jackson to Fort Wayne, Indiana, 95 miles, which will afford a southern outlet for a large amount of the great staple of the Saginaw Valley, lumber. Nearly half of this line is expected to be opened for traffic the present season. Second—the Ionia and Lansing Railroad, leading from Lansing northwest to Pentwater, 127 miles, of which the division from Lansing to Ionia is under contract, and is also expected to be completed the present season, and will be a most important feeder to our road.

It is also believed the time is approaching, and if needed legislation asked for is granted—near at hand, when we can present the extension of our own road, north, *via* the Straits of Mackinaw, to Lake Superior, to capitalists, in so favorable a light as will insure its speedy completion; developing a section of this State, abounding in products of the forest, and of soil unsurpassed in fertility for agriculture by such extension, opening to settlement a vast territory, now almost an entire wilderness, for lack of any mode of access, thereby largely enhancing the value of the company's grant of the finest lands in the world, and developing a local business amply remunerative to the road.

As soon as our floating debt is paid, it will be the policy of the company to set apart a portion of the surplus earnings to a sinking fund; which, together with proceeds of lands sold, may be invested in the bonds of the company, so reducing its bonded debt and annual interest account.

BALANCE SHEET.

RAILROAD SHARE LIST, including Mileage, Rolling Stock, Debts, Income, Dividends, &c., &c.

An asterisk (*) occurring in the column headed "Rolling Stock" signifies that the cost thereof is included, in that headed "Railroad." A dash (—) across the column signifies "nil," and running dots (.....) signify "not ascertained." Land Grant Railroads are printed in "*Italics*." State-aid Railroads are distinguished by a "¶."

RAILROAD SHARE LIST, including Mileage, Rolling Stock, Debts, Income, Dividends, &c., &c.

An *asterick* (*) occurring in the column headed "Rolling Stock" signifies that the cost thereof is included, in that headed "Railroad." A *dash* (—) across the column signifies "nil," and running *dots* (.....) signify "not ascertained." Land Grant Railroads are printed in "*Italics*." State-aid Railroads are distinguished by a "¶."

American Railroad Journal

Saturday, April 17, 1869.

Stock Exchange and Money Market.

The Money Market has been unusually close and active, nearly all the week, the pressure having been quite severe up to a late hour on Tuesday, when the current rates on call ranged from 7 per cent. gold, to ⅛ per cent. per day, flat. At the close of business on Tuesday, and through Wednesday, there was a somewhat easier feeling perceptible, the leading Government stock houses having been given accommodation at 7 per cent. in currency adding in some instances a fractional commission for the aid. The banks have not been making any considerable fresh advances, even as an exceptional matter. They reduced their loans, last week, nearly 4½ millions. They reported a further loss of nearly four millions of deposits, and nearly two millions of specie. A slight increase in the legal tender reserve was noted. The Sub Treasury added nearly three millions to its cash balances, during the week, its receipts from all sources having been over seven millions, while its disbursements on all accounts, were a little short of 4¼ millions, including less than half a million of coin interest. In the discount line there has been very little movement, and even the best grades of business paper have been quoted slow of sale at 10@12 per cent. per annum.

The specie reserve of the city banks is now $8,794,543, against $16,343,150 same time last year. The city bank deposits are now $171,495,580, against $179,851,880 week ending April 11, 1868 The legal tender reserve amounts to $48,644,732, against $51,982,609 same time last year. The circulation now stands at $34,609,360, against $34,194,272 same time last year. The loans are now $257,480,227, against $252,936,725 at this date last year. The Bank Exchanges at the Clearing House through the past week, averaged $135,009,409 a day, against a daily average of $139,737,232 the preceding week, and $139,997,747 the week ending with March 24, 1869. The current week's exchanges average about $135,500,000 a day. The city banks, last week, reported a further loss of $1,943,350 of specie, and $3,830,201 of deposits, with a gain of $148,373 of legal tender notes. They reduced their loans, $4,453,443; and their circulation, $207,556.

National Bank notes to the amount of $99,050 were issued last week by the Treasury Department, making the total issue to 1,685 banks thus far, amount to $313,796,806, against $282,555,440 at the close of the fiscal year ending June 30, 1866. From the total issue is to be deducted the currency returned, including worn out notes, amounting to $13,979,051, leaving, with the existing 1,626 banks, (having an aggregate capital of $418,858,931,) an actual circulation at this date, of $299,817,755. The United States bonds held by Treasurer Spinner in trust for National Banks as security for circulating notes amount to $342,798,300; and for the public deposits, $30,875,350—making a total of $373,673,650. The Treasury Department last week redeemed and destroyed $536,600 of worn and mutilated fractional currency, and issued $406,000 of new. The outstanding amount of fractional currency on the 1st of April, 1869, was $36,719,912, against $36,781,548 on March 1, 1869, $35,511,127 on Feb. 1, and $34,215,716 on the 1st of January.

The U. S. Sub-Treasury receipts, week ending with April 10, were $7,101,850, including $2,718,338 from customs duties; payments, $4,246,920, including $437,459 of coin interest; balance at the close of the week, $89,735,196, against $86,880,266, at the close of the preceding week, showing an increase of $2,854,930. The business of the Office during the first two business days of the current week, was as follows: On Monday, receipts, $1,040,484, including $458,527 from customs; payments, $1,393,661 including $133,000 of coin interest. On Tuesday, receipts, $930,594 including $567,481 from customs and, payments $454,648 including $26,387 of coin interest. The balance at the close of business on Tuesday stood at $89,857,966, against $87,611,306 a week previous; and $88,518,543, on March 24 1869. The aggregate receipts of the office in March were $40,051,331, including $13,241,405 from customs, aggregate payments, $40,897,476, including $3,698,831 of coin interest.

The outstanding amount of coin certificates on the 1st of April was $21,672,500 against $28,775,560, March 1; $32,659,520 on Feb. 1, and $27,036,020 on the 1st of Jan., 1869. The Sub-Treasurer at this port issued, last week, coin certifi-

cates to the amount of $308,200, and retired $2,854,930 through the receipts for customs. The coin certificates issued by the Sub-Treasury office, during March, reached $1,793,180.

Government revenues have been yielding more satisfactorily since our last. The excises, last week, yielded about 4¼ millions; customs at the port of New York, $2,718,338 and at the outports about $918,000 (in coin) more, making the grand total income for the week equal to about $9,150,000 in currency. The total receipts of the National Treasury, from excises, during the fiscal year ending with June 30, 1868, were $191,180,564. The receipts from the same source, thus far in the current fiscal year, commencing with July 1, 1868, have been about 118 millions, according to the latest Washington advices.

Gold has been in more active speculative demand, and more variable in price, ranging from 131⅛@133⅞, and leaving off on Wednesday 132¾. There was quite a lively call for cash gold late on Saturday, and as much as ⅛@1 per cent. was pay for the use of coin until Monday, owing it was said to a temporary difficulty between the Bank of New York, and the Gold Exchange Bank, in the settlement of balances. The past week's exports of specie were only $326,350; while the imports of foreign specie were $394,893. On Monday, the *City of Brooklyn* from Liverpool delivered here £207,000 in specie. There were nearly $223,000 in specie received from California. The customs demand continues to absorb about half a million a day, at this port.

The Gold Exchange Bank clearances on Wednesday, were $41,092,000, and the resulting balances $1,622,798 in coin, and $3,127,504 in currency.

The average amounts of the Gold Exchange Bank loans and discounts last week was $1,196,355, average amount of specie $457,142, average amount of deposits $931,195.

The customs demand for Gold last week, averaged $453,056 a day; thus far, this week, it has averaged $510,000 a day, or equal to a weekly aggregate of $3,060,000. The arrivals of specie from Europe, Havana and other foreign ports, during the week were $394,893, and since Jan. 1, $4,766,948, against $2,540,021 same time in 1868. The receipts from California, last week, were $222,296. The total customs revenue of the Government, in coin, at this port, from July 1, 1868, to date was $98,807,977, against $88,888,202 same time in the preceding fiscal year. At San Francisco, from Jan. 1, to Mar., 16th 1869, $1,543,675, against $1,728,595 same time last year.

The total receipts of California gold at this port, since July 1, 1868, have been $16,798,343, against $26,784,299 same time in fiscal year 1867–'68, showing a decrease in the current fiscal year, of $9,985,956. The exports of specie, from this port, last week, were $326,350, against $891,807 same week last year; total, since July 1, 1868, $31,416,963, against $44,411,282 in 1867–'68. Government disbursed last week through the U. S. Sub-Treasury here, on account of the coin interest on the public debt $437,459; since July 1, 1868, $67,891,636, against $54,517,162 same time in 1867–'68. The specie exports from San Francisco, from Jan. 1, to March 16, 1869, were $8,830,392, against $7,490,417 same time in 1868.

The offerings of Foreign Exchange have been more extensive since our last, and under the Money pressure prices have declined. The demand has been very moderate. Bankers' prime sixty day bills on London closed on Wednesday at 107⅛@107⅞, and on Paris to 5.27½@5.22½; sight bills on London to 108@108½, and on Paris to 5.21½c.@5.20. The offering of produce bills has been quite liberal this week. The week's exports of domestic produce and miscellaneous goods from this port have been to the currency value of $3,617,388, against $3,013,393 same week last year; total, since July 1, 1868, $127,331,660, against $142,498,735 same time in preceding fiscal year of 1867–'68.

Government securities have been quite confidently held all through the week, in defiance of the severe price in Money, and in the face of a very moderate demand from investment buyers. The offerings of bonds have been comparatively light, and sellers seemed unwilling to modify prices.

U. S. sixes of 1881 closed here on Wednesday at 116⅛@116⅜; U. S. Five-twenties of 1862, 120⅜@120½; U. S. Five twenties of 1864 at 115¼@115⅜; U. S. Five-twenties of 1865 at 117⅛@117⅝; U. S. Five-twenties of 1865, consolidated, 114@114⅛; U. S. Five-twenties of 1867, 114@114¼; U. S. Five-twenties of 1868, 114@114⅛; U. S. Ten-forties at 105⅛@105¼; U. S. Six per cent. currency bonds, 103¾@104¼.

The latest quotations at the London Stock Exchange compare as follows with former returns:

	Mar. 31.	April 7.	April 14.
Consols	93⅛	93⅛	93⅜
U.S. 5-20's of 1862	83¾	83⅝	84
Erie	24¾	24¼	24
Ill. Central	96¾	96¾	96¾
Atl. and Gt. Western	....	....	30½

There have been wider fluctuations in railway and miscellaneous share values, since our last, on a fairly active market.

General business has shown more activity in the leading articles of produce, but at lower prices, especially for Flour, Grain, Pork, Petroleum, and Naval Stores. Middling upland cotton closed steadily on Wednesday at 28¾@29 cts. per lb. The stock of cotton now here is estimated at about 110,000 bales. The receipts at the port this week, have averaged about 1,200 bales a day. The receipts at all the ports, since Sept. 1, 1868, have been 1,941,000 bales, against 1,952,000 bales same time in 1867–'8; exports, same time 1,051,000 bales, against 1,387,000 bales same time in 1867–'8; stock on hand at latest dates, 357,000 bales, against 261,000 bales same date 1868. Total crops of 1867–'8, 2,430,893 bales; total receipts at ports year ending Sept. 1, 1868, 2,240,282 bales; total exports thence, same time, 1,657,015 bales. The exports of domestic cotton goods from this port, since Jan. 1, have been 7,134 pkgs., against 8,235 pkgs., same time last year. From Boston, 8,262 pkgs., against 4,372 pkgs. same time in 1868. At the Live Stock markets, this week, Beeves have been in moderate demand at from 11@17c., per lb.; week's receipts, 7,482. Milch cows in fair demand at $40@$110 each, receipts, 74. Veal calves in fair request at from 9@13c. per lb. Sheep and lambs moderately active at 5@9½c., per lb.; receipts, 22,756. Swine more active at 10⅞@11¼c. per lb.; receipts, 18,361. There has been a fair call for foreign merchandise, but the tendency of prices has been generally in favor of purchasers. The total imports of foreign dry goods, last week, were $2,288,958, and the total amount marketed $2,888,479. The value of foreign merchandise imported last week, was $5,693,865—making the grand total specie value of last week's imports of dry goods and merchandise, equal to $7,982,823, against $4,522,237 same week last year; total since July 1, 1868, $210,763,672, against $182,859,615 in 1867–'8. The ocean freight market shows more animation, but on the basis of reduced rates generally. For Liverpool we quote flour at 1s. 3d. by sail, and 1s. 6d. by steamer, per bbl.; grain at 1½d.@2d. by sail, and 2d.@2½d. by steamer, per bushel; cotton at ⅛d. by sail, and $\frac{5}{32}$d.@$\frac{3}{16}$d. by steamer, per lb.; and heavy goods 10s.@25s. by sail, and 10s.@30s. by steamer, per ton. Total number of vessels in port on Wednesday, 505.

The New York exports, exclusive of specie, for the week ending April 13, and since the beginning of the year, compare as follows:

	1868.	1869.
For the week	$3,013,393	$3,617,388
Prev. reported	47,194,634	40,982,106
Since January 1	$50,208,027	$44,599,494

The imports for the week ending April 10, and since the beginning of the year, have been as follows:

	1868.	1869.
Dry goods	$1,283,873	$2,288,958
Gen. merchandise	3,283,364	5,693,865
Total for the week	$4,522,237	$7,982,823
Previously reported	61,328,423	77,367,354
Since January 1	$65,850,660	$85,850,177

The balance in the Sub-Treasury on Wednesday was $89,921,871 17.

☞ A DESIRABLE INVESTMENT. ST. LOUIS, VANDALIA AND TERRE HAUTE RAILROAD CO. First Mortgage 7 per cent. Bonds. Twelve Thousand Dollars per mile Guaranteed by—The Terre Haute and Indianapolis Railroad Company. The Columbus, Chicago and Indiana Central Railway Company. The Pittsburg, Cincinnati and St. Louis Railway Company. The Pennsylvania Railway Company, for sale by LUDLOW THOMAS, 39 Pine street, New York.

Illinois Central Railroad.

The statement of this Company for the month ending March 28, 1869, is as follows:

LAND DEPARTMENT.

Acres Construction Lands Sold	9,621.22 for	$94,186.28
Acres Int. Fund Lands sold	174.41 for	2,712 05
Acres Free Lands sold	1,420.51 for	19,790 48
Total sales during month of March, 1869	11,216.14 for	$116,688 81
To which add Town Lot Sales		80 00
Total of all	11,216.14 for	$116,768 81
Cash collected in March		$206,124 43

TRAFFIC DEPARTMENT.

Receipts from Freight		$369,781 00
do. Passengers		138,591 10
do. Mails		6,358 33
do. Rent of Road		4,000 00
do. Other Sources		90,000 00
Total Receipts in March, 1869		$608,730 43
Total Receipts in March, 1868		$390,353 34
Estimated earnings in the month of March, on the D. & S. C. R. R., not included above		$102,828 90
Corresponding month of 1868		$52,668 40

Changeable Gauge Cars.

The "National Despatch Line" have now running a through line of changeable gauge freight cars between Boston and Chicago, passing over the Boston and Lowell and Nashua, Concord, Northern (N. H.,) Vermont Central, Montreal and Vermont Junction, Grand Trunk and Michigan Central Railroads, comprising the 4 ft. 8½@5 ft. 6 in. gauges. Two hundred of these cars are now under contract, all of which will be completed by the first of July. One hundred have already been delivered, and are now running on the line, a part of them since the first of January, and it is intended immediately to increase the number of cars to 500, and afterwards further to increase the stock as the business may require; thus furnishing to Boston and other New England cities and towns another expeditious through freight line without trans-shipment [illegible] from Chicago and other Western cities.

Pittsburg, Ft. Wayne & Chicago Railway.

The following is a statement of the approximate earnings and expenses of this company during the month of March, as compared with the same period of the year 1868:

	1869.	1868.
From freight	$497,126 05	$450,767 03
" passengers	221,818 10	212,152 81
" express matter	10,651 50	10,257 00
" mail	7,825 00	7,825 00
" rent of railway	7,083 34	7,083 34
" miscellaneous	1,000 00	1,282 16
Total	$745,503 99	$689,317 34
Expenses	404,549 64	397,240 81
Net earnings	$340,954 35	$292,076 53

This shows a decrease in earnings of $56,186 65; with a decrease in expenses of $7,308 83—making the increase in net earnings, $48,877 82.

The earnings and expenses, from January 1 to March 31, compare as follows:

	1869.	1868.
Earnings	$1,957,222 80	$1,799,138 50
Expenses	1,249,747 09	1,186,085 37
Net earnings	$707,475 71	$613,053 13

This shows an increase in earnings of $158,084 30; with an increase in expenses of $63,661 72—making the increase in net earnings, $94,422 58.

☞ The Macon and Western Railroad Company have declared a stock dividend of 33⅓ per cent. out of the earnings that have heretofore been invested in the construction and improvement of the company, payable on and after the 15th of May. Stockholders registered in New York will receive their dividends at the National Bank of the Republic. No fractional shares will be issued, and no transfers will be made after April 25 until May 15.

☞ The President has approved the act recently passed by Congress, to extend the time for the Little Rock and Fort Smith Railroad Company to complete the first section of twenty miles of said road. Also the act to amend an act, entitled "An act granting land to aid in the construction of a railroad and telegraph line from the Central Pacific Railroad, in California, to Portland, in Oregon," approved July 25, 1866.

☞ The tunnel on Crooked Creek, near Marble Head, in Bollinger Co., Mo., on the line of the Iron Mountain Railroad Extension, has been opened to daylight. It is about 1,000 feet in length. The road bed of this road is now complete, and the company are only awaiting the arrival of rails to finish twenty-five miles, when the entire line will be opened.

☞ The earnings of the European and North American Railway in March, 1869, were $12,360, against $10,871 in March, 1868—an increase of $1,489.

☞ Concord, N. H., has pledged nearly $75,000 toward the extension of the Concord and Claremont Railroad. The final survey will be commenced as soon as the ground is settled.

☞ The New Orleans and Opelousas Railroad has just concluded a contract for one hundred and sixty tons of English railroad iron, extra quality.

From Herapath's Railway Journal.

American Locomotives and Rolling Stock.

Mr. Zerah Colburn, M. Inst. C. E., read a paper upon the above subject before the Institution of Civil Engineers on the 9th ult.

It was remarked that, in construction and working, the American railways represented little more than a modified application of English practice. When the systems of the railway machinery of the two countries were compared, many of the differences which first struck the eye were found to be external rather than fundamental; and so, too, many of the peculiarities of construction now retained in America were due to the initiative of English Engineers.

Pursuing the history of the introduction of locomotives into the States, it was observed that the first two worked in America were made in England, in 1828, one by Mr. George Stephenson, the other by Mr. J. U. Rastrick. In the same year the engineers of the then contemplated Baltimore and Ohio railroad visited this country, when Mr. Robert Stephenson suggested to them, what was now the distinguishing feature of all American railway rolling stock, viz.: the bogie, to be applied to the engines intended to work round curves of 6 chains radius, at that time proposed to be adopted. The bogie, which had grown out of William Chapman's invention of 1812, was then, Mr. Stephenson stated, in regular use upon the quays of Newcastle. Having regard to the character of the lines first constructed in the States, it was essential that the locomotives should be light and cheap, and the first engines made there, between 1830 and 1832, weighed only from 3½ tons to 4 tons, Some of the English built engines imported at about that time had their leading wheels removed, and a swivelling bogie substituted. The bogie, was not, however, exclusively employed. Considerable numbers of engines made by Messrs. Stephenson and Co., Messrs. Bury, Curtis, and Kennedy, Messrs. George Forrester and Co., and Messrs. Braithwaite and Co., were afterwards imported and worked as originally constructed; and, as late as 1855, at least one hundred locomotives of English construction, or made almost exactly upon Messrs. Stephenson's plans, could have been counted at work in the States. For many years wood only was employed as fuel, and as it produced great quantities of sparks, as annoying to passengers as they were dangerous to goods, much ingenuity was directed to the problem of separating and withholding them from the escaping smoke and steam; and the voluminous "spark arresters" were very successful in this respect, while they gave also an individuality to the engines. Again, the rigours of the American winters compelled the adoption of some kind of shelter for the enginemen and firemen; and this was afforded by the bulky, and often extravagantly painted "cabs," which imparted a novel appearance but without in any way affecting the principles, or economical conditions of working, of the engine.

As high speeds were seldom attempted upon the early American lines, the greatest steam tractive power was sought and obtained, both by working high-pressure steam and by employing driving wheels of small diameter. Thus, although, in 1835, the English built engines, and those copied from them, were worked at 50lbs. pressure, and had five feet driving wheels, it was not long before American practice settled upon 90lbs. to 100 lbs. pressure and 4ft. or even 3ft. 8in. driving wheels. It was soon found, however, that the adhesion weight upon a single pair of wheels, necessary to work up this increased steam tractive force, was too great for the strength of the way, and coupling was then resorted to; and now, with the exception of a few light tank engines on branch lines, there was not probably an engine in the States having single or uncoupled driving wheels. Four tons might be said to have been the maxium per wheel for many years, while three tons was the more usual average. Compensating levers, generally made of long steel springs, were now employed on all American engines, whereby the weight was not only equalled between the coupled wheels, but the effect of a jolt upon one pair was divided and distributed, through the springs and levers upon the other pair. For some years, too, the bearings of the outer ends of the springs of the coupled wheels were made to rest upon india-rubber blocks.

The details were then given of several descriptions of engines long worked on the Baltimore and Ohio and Reading railroads, as well as of that employed to work the incline of 1 in 16⅔ and 1¼ mile long, at the Madison terminus of the Madison and Indianapolis railway. Compared with English practice, in which six-wheeled coupled engines had from 5 tons to 6 tons on a wheel, and eight-wheeled coupled engines had 7 tons on a wheel, it was observed that the subdivision of weight in American engines was carried about half as far again, or, in other words, that they averaged only about two-thirds as much weight per wheel, and that they thus required, for a given total weight, half as many more wheels. Except with smaller wheels, this could not be done on any practicable length of wheel base, but none of the American goods and bank engines of which the particulars had been given, had wheels larger than 3ft. 11in. in diameter. There were objections also, of much weight, to coupling a large number of wheels from a single pair of cylinders. It was more or less difficult, if not impossible, to preserve an exact equality in the diameter of the wheels, an exact parallelism of the axles, and an exact equality in length of the coupling rods. The extent to which coupling had been caaried in American goods engines had been due, in a great measure, to the following expedients. The coupled wheels were as equally loaded as possible; Their tyres, in a majority of cases, were of chilled cast-iron, since replaced by steel; and the former were cast, and the latter turned, nearly or quite to a cylindrical form, or with but little or no cone. The driving wheels were the middle pair, or, in the case of an even number of pairs, one of the pairs nearest to the mid length of the wheel base; compensating levers were employed, and adjusting wedges had for some years been applied to the axle boxes. The coupling rods, in many cases, were made without brasses, round steel bushings being fitted to circular eyes formed at the exact required distance apart in the ends of the rods. With the exception of the leading and trailing wheels, the coupled wheels were generally fitted with plain cylindrical tyres having no flanges. Outside coupling cranks, necessary with outside frames, had rarely been employed, and were never so now. The coupling rods were counterweighted, within the wheels themselves, no attempt being made, in inside cylinder engines, to set off their weight against that of the cranks and attached parts. In other words, the coupling pins of the driving wheels were coincident, on each side of the engine, with the position of the crank in inside cylinder engines, and, of course, necessarily so in outside cylinder engines. The experience of American locomotive engineers had been to the effect that with this arrangement, which was the opposite of English practice, the axle-boxes wore more uniformly, and that there was less "knocking" where a little play in the horn plates had once begun. And lastly, the length of the crank being one-half the radius of the small coupled wheels employed, any inequality in the length of the coupling rods was attended with less slipping and binding than where, with larger wheels, the crank was but about one-third the radius of the wheel.

The general form of passenger engine now in use in the States was then described. It had in most cases outside cylinders—indeeed inside cylinder engines had not been built for many years—and it had invariably four coupled driving wheels, and a four-wheeled bogie. The leading dimensions of the representative type of passenger engines were, cylinders from 15 inches to 17 inches in diameter, with a length of stroke of from 22 inches to 24 inches, and coupled driving wheels of from 5 feet to 5 feet 8 inches in diameter. Such engines would exert a tractive force of 3½ tons to 4 tons in starting, for which their adhesive weight, assisted sometimes by sand, was sufficient; and thus they could get quickly away from stations even with trains of a gross weight of two hundred tons or more. Economy of fuel had not been studied to the same extent in America as in English locomotives; the blast pipes of the former were smaller, the draught more forced, the back pressure greater, and less expansion was attempted in the cylinders, the link motion being generally arranged to cut off at one-third stroke as a minimum, and at nine-tenths or more as a maximum. It was thus that boilers of moderate size were made to supply steam for work equal to 300 I. H. P., or the exertion of upwards of 2 tons of draught upon a passenger train at a mean speed of 25 miles an hour; but there was nothing remarkable in the consumption of from 50lbs. to 60lbs. of coal per mile in such work. It was stated that on the Pennsylvania Central railroad, a line 356 miles long, with gradients of 1 in 100 and 1 in 55, the consumption of coal for both goods and passenger trains amounted on an average to about 70lbs. per train mile, the goods mileage being three and a half times the passenger mileage. The coal was of excellent steaming quality, and cost abont 3½d. in currency, or 2½d. in coin, per train mile. At this rate a difference in consumption of 24lbs. of coal per mile would only cause a variation of a penny per mile in the cost of fuel; and it had been argued that such a waste was better than the alternative of employing an engine 4 tons or 5 tons heavier, to work with a less rapid rate of combustion, a slower piston speed, and more expansively.

The policy of American railway managers with respect to goods traffic, as it was also the policy of the managers of most of the French lines, was maximum loads at slow speeds, involving a maximum resistance per ton, and correspondingly a maximum working expenditure per ton.

No experiments upon the dynamical efficiency of American engines had been made, so far as the author was aware; but he had run an experimental train on the Erie railway, over the whole length of the line and back, a total distance of nearly 900 miles. The same engine was employed throughout the run, occupying in all nearly three weeks, making an average for each week day of about 50 miles. The results of these experiments appeared to show that the resistence of bogie rolling stock, even under disadvantages, was less than that of English rolling stock as ascertained by the best authorities, and also that the ratio of adhesion to weight averaged considerably more in the States than in England. With respect to adhesion, as the surfaces in contact were identical with those on English railways—indeed the rails and tyres in general use in the States were commonly of English manufacture—any difference in this respect must be attributed partly to the influence of climate and partly to a better application of sand, when necessary to increase the bite upon the rails. The sand was dropped equally upon both rails, not in intermittent handfuls down a pipe on one side of the engine only, but by means of the hand gear and regulating valve since adopted on the North London railway. The experiments in question were, no doubt, influenced by the favorable circumstances of weather, and something was to be allowed also for the great length of train drawn, very long trains having a less tractive resistance per ton on a level than short ones, and something, possibly more than was commonly supposed, might have been due to the use of oil-tight axle-boxes, the saponaceous compound known as "railway grease" being nowhere in use on railways in the States. Messrs. Guebhard and Diendonne's experiments, made in 1867, on the Eastern railway of France, showed a considerable diminution in the resistance of oil-boxed rolling stock as compared with that fitted with grease-boxes.

With regard to the expense of maintenance, it was stated that the average cost of engine repairs in the States, exclusive of those renewals which

amounted to building a new engine, might be taken as a maximum at 10 cents currency per train mile, equal to 3½d. in coin. Of this, the absolute difference in the cost of labour and materials would account for nearly or quite 1d., leaving 2½d. to 3d. as the cost at English prices. Again, the manner in which these repairs were conducted showed a want of system and organization, and the shops were not fitted with some of the appliances considered essential in this country. Whatever economy in repairs might attach to the American engines was due, after allowing for the moderate working speed, to three causes only—viz., the use of the bogie, of chilled cast-iron bogie wheels (which could be renewed at a cost of from £2 to £2 10s. each, after allowing for the value of the wheel taken out as old iron), and of steel or iron fire-boxes and iron tubes. About twelve or fifteen years ago, the average mileage of American engines, taking the full stock of the leading lines, was not above 15,000 miles yearly—now it was probably not far short of 20,000 miles, and on some lines it might be even more.

There remained the consideration of the carriage and wagon stock, with reference to its mechanical peculiarities and its commercial relation to traffic. The earlier American carriages were made upon the English model, but it was found, not only that a short wheel base was required for six chain and nine chain curves, but also that side buffers aggravated the difficulty. The bogie, already in use on the engines, was, therefore, adopted for the carriages, and it was soon discovered that the length of body could be considerably increased, and that the longer it was the steadier it became. But the long bodies precluded the use of side buffers, and so the central buffer with a loose coupling took their place. End doors afforded an obvious means of economy in the structure of the carriage, and left the whole depth of the body below the window-sills available for any combination of trussing, most effective for carrying a comparatively long span. The end doors, with a continuous passage throughout the carriage, afforded obvious facilities for communication. The central passage required an additional width of carriage, and from 9ft. to 9ft. 6in. was a common outside width; while in some cases, even on the narrow guage, a width of more than ten feet had been adopted. The widths allowed seats for four passengers across, and for the longitudinal passage dividing the seats. The seats had reversible backs, so that the passenger might face either way, the carriages running in either direction without turning. It was undeniable that the seating was not so roomy and comfortable as in an English first-class carriage, and that, as compared with a second-class carriage, there was a certain loss of space. It was equally undeniable that such carriages could never answer for short traffic lines, where forty, fifty, or more passengers had to leave, and as many more to enter, in a minute or a minute and a half. The long body, however, with end doors and platforms, possessed obvious mechanical advantages. Its length gave steadiness, and the depth below the window-sills afforded ample opportunity for providing vertical stiffness without undue increase of weight. There were no cross partitions; there were but two doors where English carriages would requre, for the same number of seats, according to class, from twelve to twenty-six; there was much less sash and glazing, while there was at the same time more light; there was an important saving in respect of draw-springs, buffers, buffer-rods, and screw couplings, and there was every facility for applying brakes, as was always done in the States, to every wheel in the train, either from the platforms of the carriages themselves or from the engine. It was an advantage of the long body, with its corresponding weight and number of wheels, that the application of the brakes, however suddenly, did not produce the jolting of which passengers complained so much when the same thing was attempted upon English carriages. Passenger carriages upon the double bogie plan were made of various lengths, from 45 feet to 60 feet, exclusive of the additional 2 feet 6 inches at each end for platform and covering porch. They accommodated from 60 to 84 passengers, and weighed, empty, 12 tons and upwards, or from 16 tons to 22 tons loaded. Some notice was next given of Pullman's hotel car, and of the carriage, built by Messrs. Winans, for the Emperor of Russia. The improvements which had been effected in the engine and other bogies were then alluded to, and a description was given of the oil-tight axle-boxes, as well as of Loughridge's and of Creamer's continuous brakes.

In comparing the cost of maintenance of American carriage and wagon stock with that on English lines, many considerations were to be regarded. To say that the cost, in 1867, on the 1,612 miles of railway in the State of Massachusetts, for a train mileage of nearly ten million miles, was 6.55 cents, currency, or about 2¾d. coin, per train mile, did not permit of any accurate deductions. In the States, the average number of passengers continuously carried over the whole distance made by a train was generally one-half greater than in England, although the proportion of dead weight to live load was probably nearly as high as in this country; the speed was less, and there remained the fact that labor and nearly all materials were much dearer. On the other hand, there was a considerable saving in the use of chilled cast-iron wheels, such a thing as a wheel-turning lathe for carriage or wagon stock being unknown in the States; the maintenance of the buffer and draw springs cost much less; the maintenance of the carriage bodies was cheaper, from their greater strength and simplicity of structure, and from the fact that there were no side doors to slam.

One objection to the use of chilled cast-iron wheels, not referred to in the earlier portion of the paper, was that, being almost necessarily of the disc form, their weight increased in a ratio nearly as the square of the diameter, and thus the largest railway carriage wheels yet employed in the States were but 3ft., and this size was long ago discontinued in preference for 2ft. 9in. In the case of cast-iron spoked wheels, the chill was less hard opposite the ends of the spokes than elsewhere, and thus they soon showed flat spots.

It might be said, in conclusion, that if American railway practice were in any or many respects more daring than that which prevailed in this country, failure, if not too often repeated, was regarded in the cousin country as a misfortune, while here, unless it proceeded from causes absolutely beyond prevision, it was rightly regarded as a fault, a misdemeanour, or even a crime.

Railroads of Arkansas.

The following communication has been made to the Arkansas Assembly by J. H. Barton, private Secretary to the Governor, notifying that body of the award of State aid to railroads:

I am directed by his excellency, the Governor, to inform your honorable body, that at a meeting of the board of railroad commissioners, held March 15th, 1869, he was instructed, as President of said board, to report to the General Assembly the result of the action of the board in awarding State aid to certain railroad incorporations in the State.

Whilst it was at first deemed advisable by the railroad commissioners not to award aid to any of the railroad companies until a bill was passed by the General Assembly making provision for the funding of the outstanding indebtedness of the State, and thereby giving confidence in our State aid as applied to railroad enterprises, yet the recent action of the upper house of the General Assembly, and a conference with some members of the lower house, have induced the board to conclude that an immediate award of the State aid is desired by a majority of the members, and possibly by the people at large.

Believing that the State aid can only be made available by complying strictly with all the provisions of the law, as approved by the people, and having perfect confidence in the intention of your body to pass a general funding bill at an early day, and being desirous of acting in conformity with the will of the people, the board of commissioners, after a careful investigation of the various railroad companies asking State aid have made the award to the following incorporations, they having complied with the provisions of the law:

To the Cairo and Fulton Railroad Company, three hundred miles of its line; to the Little Rock and Helena Railroad Company, ninety-eight miles of its line; to the Memphis and Little Rock Railroad Company, ninety miles of its line; to the Little Rock, Pine Bluff and New Orleans Railroad Company, for that portion of the road which lies between Pine Bluff and the State line, commencing at Pine Bluff and running the line of the road toward the State line, one hundred and twelve miles; to the Mississippi, Ouachita and Red River Railroad Company, so much of the road as lies between Camden and Mississippi River, not to exceed one hundred miles.

The board took into consideration the application of the Memphis and St. Louis (levee) Railroad Company, but Congress having been memorialized to aid in the construction of a levee and railroad bed along the west bank of the Mississippi River, and there being a strong probability that such aid will be given, the board declined to accept the application of the said St. Louis and Memphis Railroad Company for State aid.

No award of State aid was made to the Western Border Railroad Company, by the board, as no application had been made and the law had not been complied with.

The board also refused to accept the application of the Pacific and Great Eastern Railroad Company, not being satisfied that the resources of the company were sufficient, with the State aid, to enable them to finish the road, it being a work of great magnitude.

I am further directed to say, by his excellency, on behalf of the board of commissioners, that they have not awarded State aid to any road running from Little Rock to Fort Smith. They have, however, reserved aid to the amount of 150 miles, to be hereafter awarded to one of three incorporations, two of which are claiming the same right of way and the same land grants, and one of which has been reported upon by the Senate of the United States at the last session as a part of the 35th parallel road to the Pacific.

The commissioners are undecided in reference to the proper selection and award to be made for these routes, but are of the opinion that Congressional action will throw light upon and probably decide this question. For these reasons the board of railroad commissioners has deferred taking any action for the present in respect to these routes.

Railroads in New Jersey.

The large transportation business in the western part of New Jersey, occasioned by the working of the ores, has given an impetus to railroad construction in that part of the state. The Sussex Railroad extension is finished to within a mile of Franklin. The Branchville Road being principally agricultural, is not pushed so rapidly. The Sussex extension is to be continued to Hamburg and Vernon, and a connection will finally be formed with the Warwick Valley Road, a branch of the Erie. From the Hamburg line, about one mile from the village, it is intended to build a spur to the Pochuck hematite mine. In addition to these roads there are other projected lines, as from the zinc mines at Franklin to Andover, from Newton to Belvidere, and from Hackettstown to Water Gap; the principal objects of the two latter roads being to supply the furnaces with anthracite coal from the Pennsylvania mines. The projected road from Franklin to Andover is to be built, if built at all, by the New Jersey Zinc Company.

Journal of Railroad Law.

WHEN CARRIERS EXEMPTED FROM LIABILITY AS INSURERS—SPECIAL CONTRACT—STATEMENT OF VALUE OF PROPERTY IN RECEIPT—WHEN CONTRACT DEEMED TO BE ASSENTED TO.

The following are the facts in the late case of Boorman *vs.* The American Express Company (21 Wis., 152) which was an action for injuries to a violin carried by defendent for plaintiff from Milwaukee to New York City. The answer alleged that defendant had no knowlege or information sufficient to form a belief as to the alleged neglect and wrongful acts; and that it received the violin under a special agreement, as follows: "Received of C. Boorman one box, said to contain instruments valued at — dollars, marked Geo. Germunder, New York N. Y., which we undertake to forward to the nearest point of destination reached by this company, subject expressly to the following conditions, namely: This company is not to be held liable for any loss or damage except as forwarders only, nor for any loss or damage by fire, by the dangers of navigation, by the act of God or of the enemies of the government, the restraints of government, mobs, riots, insurrections or pirates, or from or by reason of any of the hazards or dangers incident to a state of war. Nor shall this company be liable for any default or negligence of any person, corporation or association to whom the above described property shall or may be delivered by this company, for the performance of any act or duty in respect thereto, at any place or point off the established routes or lines run by this company for any such person, corporation, or association is not to be regarded, deemed or taken to be the agent of this company for any such purpose. * * * Nor shall this company be liable for any loss or damage of any box, package or thing, for over $50, unless the just and true value thereof is herein stated; nor upon any property or thing unless properly packed and secured for transportation; nor upon any fragile fabrics, unless so marked upon the package containing the same; nor upon any fabrics consisting of or contained in glass. The party accepting this receipt hereby agrees to the conditions herein contained." (Signed by the company's agent.)

On the trial, after the plaintiff had introduced evidence of the shipment, the condition of the instrument when shipped, the manner in which it was packed, its condition immediately after its arrival at New York, and the amount of damage sustained, he produced, upon demand of the defendant, the original receipt, &c., as above stated which he admitted was delivered to him at the time of the delivery of the violin to defendant; and said receipt, &c., was put in evidence by the defendant. The court refused to allow defendant to prove that the violin was not broken through its negligence, holding that the answer did not deny the averments of the complaint on that point. It also refused to allow an amendment of the answer so as to make it deny absolutely those averments. Some evidence was then introduced by defendant as to the amount of damage sustained by the plaintiff. The court instructed the jury as follows: "If the receipt was expressly agreed to, or by fair implication an agreement could be presumed, it might be binding. The burden of proof is upon the defendant, to show the contract by the agreement of the parties. He asks me to instruct you that there was an agreement between the parties for the transportation of this violin to New York. This I decline to do, because the terms and conditions are entirely outside of a simple receipt. They go to discharge the defendant from its common law liability, and there can be no limitation of this liability except by an express contract, and unless the party taking the receipt knows the terms and conditions therein expressed, there can be no assent to them. The real question is, whether the plaintiff knew of the stipulations and conditions contained in the receipt. I do not recollect of any testimony bearing upon that point, except that of the plaintiff, who appears to be a German, and who required the assistance of an interpreter in giving his testimony before you. He testified that he took the box to the defendant, and asked him how much there was to pay. They told him. He paid them, took the paper, and went away. It is for you to say whether this was a contract. In my opinion it was not, but it is for you to determine."

The following is the opinion of the court by DIXON, C. J.—The answer of the defendant is a sufficient denial that the violin was carelessly, negligently and wrongfully split and broken as alleged in the complaint, to put the plaintiff upon proof of those allegations, and consequently sufficient to let in the rebutting evidence offered by the defendant. It was error to reject such evidence. An answer denying any knowledge or information sufficient to form a belief as to facts presumed to be within the knowledge of the defendant, or of which he can easily inform himself, is bad; but such is not the nature of the facts here put in issue. The defendant, the express company, which is no more than a co-partnership doing business under that name, transacts its business through a multitude of agents residing in different parts of the country, and the knowledge of such agents is not for this purpose the knowledge of their principals, the proprietors of the company. Neither can the proprietors readily avail themselves of or acquire the knowledge of their agents. This would be extremely difficult in the first place, on account of the great number of such agents residing in places remote from each other and from the proprietors themselves; but more especially, because the guilty or negligent agent in every such case is adversely interested. He might evade inquiry, or give false answers. To hold, therefore, that the proprietors must know the facts, or obtain correct information of them, before they can answer to an action, would, in very many cases, be equivalent to an unqualified denial of justice. We are of opinion that such is not the rule of law, and that the answer in its present form is sufficient.

In deciding this point we may perhaps, be acting outside of the record. It may be that the business of the company, and the manner in which it is transacted, should have been stated in the answer, and shown at the trial, by way of justifying the form of denial employed; but we assume, as was assumed by the counsel at the bar, that this was unnecessary.

The contract embodied in the receipt, if intelligently made, is good in law and binding upon the parties. The court below was of this opinion, but instructed the jury that there was no proof that it was intelligently made, or that the plaintiff knew and assented to its conditions, the burden of which proof, the jury were informed, was upon the defendant. The receipt and contract was shown to have been in the possession of the plaintiff. It was produced by him at the trial, upon notice given by the defendant. We think that the rule of law in such a case is correctly stated in King *vs* Woodbridge 34 Vt., 571—2, that, the paper being shown into the custody of the plaintiff, a due and proper delivery of it to him, and his assent to its terms, are to be presumed, and that the burden is thrown on the plaintiff to obviate these presumptions by proof. It is for the plaintiff, then, to show the circumstances under which the paper came into his possession, that he never assented to its terms, and that there was no such delivery of it as to make it operative as a binding contract.

It is to be observed with reference to the conditions of this receipt, that they do not involve the much vexed question as to whether a common carrier can protect himself by contract from liability for losses occurring through his own negligence or misconduct, or the negligence or misconduct of his own agents or servants. The conditions in question do not purport to guard the express company against liability for losses thus arising. They purport merely to exempt it from liability as insurer; from losses arising through the default or negligence of any other person, corporation or association to whom the property shall be delivered by the company for the performance of any act or duty in respect thereto, at any point or place off the established routes or lines run by the company; and from liability for any loss or damage of any box or package for over $50, unless the just and true value is stated in the receipt, or upon property not properly packed, or fragile fabrics not so marked upon the package, or fabrics consisting of or contained in glass. All these are conditions which a common carrier may lawfully make; and if assented to by the shipper, we believe there is no conflict of opinion but that they will be binding upon him.

By the Court.—The judgment of the county court is reversed, and a new trial awarded.

Chester Creek Railroad.

The new Chester Creek Railroad, connecting the Baltimore Central with the Philadelphia, Wilmington and Baltimore Railroad, was formally opened on the 13th inst. The Chester Creek Railroad makes a junction with the Philadelphia, Wilmington and Baltimore Railroad at Lamokin Station, a short distance below Chester, but within the city limits, and follows the creek to the West Chester junction, a distance of 6½ miles.

☞ The Cincinnati *Inquirer* states that, the directors of the Cincinnati, Hamilton and Dayton Railroad having refused to complete the lease to the Erie and Atlantic and Great Western Companies, the Erie management have engaged the Little Miami and the Cleveland, Columbus and Cincinnati roads to carry all the freight brought by the Erie.

☞ Passengers to and from New York and Philadelphia are now received on all the fourteen daily trains between those cities—including the 8.40 P. M. through train, from which they have hitherto been excluded.

☞ Mr. E. F. Falconett, Engineer, has commenced the location of the Tennessee and Pacific Railroads.

BOOTH'S DUPLEX, SAFETY, Steel and Iron Rails,

Now fully demonstrated to be the TRUE STEEL RAIL, we are now ready to negotiate with Railroad Companies for its adoption under such arrangements and suggestions as we will upon application by letter or in person make known to them. *Opening a new era in Railway economy hitherto unprecedented.* All communications must bear the signature of either the President, Vice President, Superintendent or Engineer.

United States Railroad Screw Spike Co.

No. 45 Cliff-Street,
NEW YORK.

We respectfully call attention to the DOUBLE HOOK HEADED SCREW SPIKE for fastening rails and chairs to ties. The above cut represents the size and shape of the Screw. It has been thoroughly tested on several of the most important railroads in the country, and in almost every case it has stood the test in the most admirable manner.

The SCREW SPIKE possesses the following advantages over the common spike:

First. They are made of the best refined Iron, the thread being forged (not cut), refines and toughens them.

Second. The holding-power of each Screw is from four to five tons, and the side pressure, three to four tons.

In three years' experience no Screw has moved from its place, and the rails in every case have been held as firmly to the ties as when first put down. By its use, therefore, the numerous accidents constantly occuring from loose and broken spikes, and loose and broken rails, and consequent spreading of the track will be obviated.

Third. In order to remove the rails it will only be necessary to reverse the SCREW one-quarter, and when replacing it, turn the SCREW back to its original position (the same as turning a button); when the rail will be held firmly, as before. *The ties* will thus be saved from the injury of splits, and the numerous holes made in them by repeatedly drawing out and replacing spikes. By the use of the SCREW, therefore, the durability of the ties will be greatly increased.

The saving to railway companies in ties alone, it is estimated (by experienced trackmasters) will more than pay the whole cost of the SCREW.

Fourth. Where the SCREW is in use, in addition to the saving of time in relaying rails, a much less number of men are required to watch the track, and keep it in repair, thereby causing a great saving.

In corroboration of the foregoing, we could present the testimony of many of the most experienced trackmasters and engineers in the country, but deem it only necessary to refer to the following railroad companies selected from more than forty who have used these SPIKES in more or less quantities, viz:

Philadelphia & Reading, Hudson River, Philadelphia, Wilmington & Baltimore, New York & New Haven, Chicago & Rock Island, Fond Du Lac & Sheboygan, Albany Bridge Company, Quincy Bridge Company.

We are now prepared to manufacture these SCREWS in any quantity desired.

PRATT'S
PATENT COMPENSATING FISH-JOINT,

VERREE & MITCHELL,
IRON AND STEEL MANUFACTURERS,
No. 939 North Delaware Avenue, Philadelphia, Penn.

COMBINES MORE ADVANTAGES THAN ANY FISH-JOINT HERETOFORE INTRODUCED.

This Joint is made of two heavy bars of wrought iron, or cast steel, sixteen inches in length, or any other desired length, fitted to the side of the rail and secured by four three-quarter inch bolts, with four malleable cast-iron cups and washers, and a gum ring two inches in diameter and half an inch thick, in each cup.

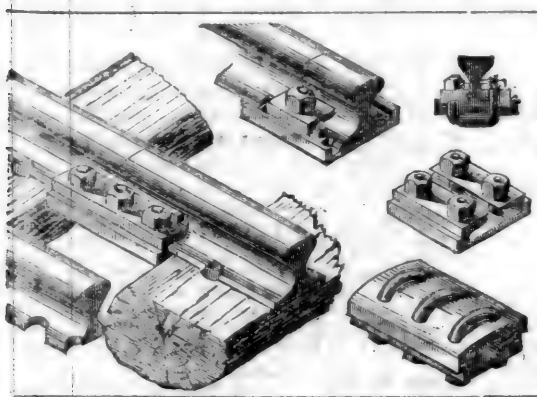
The value of gum to absorb jarring motion is well known: but when the pressure is as great as that required to secure the ends of railroad rails, some device, or method by which to prevent the gum from being forced out from under the washer, when subjected to increased pressure, is indispensable. The PATENT COMPENSATING FISH-JOINT secures that effect and enables Railroad Managers to apply all the force and pressure desired.

Where this Joint is securely fastened by screwing the nut upon the washer and gum in the cups with a lever three feet in length, it makes a perfectly tight joint, and thus secures what Railroad Managers have long desired—*a continuous rail*, with sufficient elasticity in the gum to relieve from and compensate for the sudden jar and at the same time allow for expansion and contraction by heat or cold.

We confidently claim for the PATENT COMPENSATING FISH-JOINT:

That it makes the best and cheapest form of fastening, requiring no plate or chair underneath the foot of the rail.

That it is safe and secure, and prevents the numerous accidents resulting from loose or broken rails.



That this Joint absorbs the vibratory shock given by the wheels in passing over the ends of rails, and thereby preventing fracture; and we have yet to hear of the first rail having been broken with our Joint on it.

That it can be applied in repairing and relaying with the least trouble and delay.

That the materials are indestructible, and make A PERFECT AND CONTINUOUS RAIL, thus securing what has long been desired, and what all previous experiments have failed to attain.

The Manufacturers can supply these Joints, complete in all their parts, ready to be fastened to the rails with dispatch

Refer to all the Leading Railroads in the Country.

New York Saturday, April 24, 1869.

Railroads of New York.

The following is a list of Railroad Companies organized during the year ending September 30, 1868, that have filed Articles of Association in the Office of the Secretary of State of the State of New York :

Black River and St. Lawrence Railroad Co.—Articles of Association filed June 30, 1868. Length of proposed road about 38 miles. Located in Jefferson and St. Lawrence Counties. Capital stock, $380,000.

Black River and Woodhull Railroad Co.—Articles of Association filed June 20, 1868. Length of proposed road and branches about 12 miles. Located in Oneida County. Capital stock, $25,000. This road is to be laid with wooden rails, to be used for transporting lumber and wood with horse power.

Booneville and Constableville Railroad Co.—Articles of Association filed January 31, 1868. Length of proposed road 8 miles. Located in Oneida and Lewis Counties. Capital stock, $125,000.

Booneville and Ontario Railroad Co.—Articles of Association filed April 16, 1868. Length of proposed road about 45 miles. Located in Lewis and Oneida Counties. Capital stock, $500,000.

Brooklyn City, Hunter's Point and Prospect Park Railroad Co.—Articles of Association filed July 31, 1868. Length of proposed road 16 miles. Located in Kings County. Capital stock, $300,000.

Buffalo, Corry and Pittsburg Railroad Co.—Articles of Consolidation of the Buffalo, Oil Creek and Cross Cut Railroad Company, and the Cross Cut Railroad Company of Pennsylvania, pursuant to Act Chap., 753, Laws 1867, forming the company, filed October 15, 1867.

Cattaraugus Railroad Co.—Articles of Association filed March 10, 1868. Length of proposed road, 22 miles. Located in Cattaraugus County. Capital stock, $500,000.

Cazenovia and Canastota Railroad Co.—Articles of Association filed January 22, 1868. Length of proposed road, 15 miles. Located in Madison County. Capital stock, $300,000.

Cornwall Suspension Bridge Railroad Co.—Articles of Association January 14, 1868. Length of proposed road about 15 miles. Located in Dutchess, Putnam and Orange Counties. Capital stock, $2,500,000.

Eastern Branch of the Dutchess and Columbia Railroad Co.—Articles of Association filed October 11, 1367. Length of proposed road to be 16 miles. Located in Dutchess County. Capital stock, $160,000.

East Side Railway Co.—Articles of Association filed March 18, 1868. Length of proposed road about 5 miles. Located in the City of New York. Capital stock, $1,000,000.

Erie and Genesee Valley Railroad Co.—Articles of Association filed January 24, 1868. Length of proposed road about 25 miles. Located in Allegany, Steuben and Livingston Counties. Capital stock, $500,000.

Erie and New England Railroad Co.—Articles of Association filed January 15, 1868. Length of proposed road about 37 miles. Located in Orange, Rockland, Westchester and Putnam Counties. Capital stock, $2,500,000.

Far Rockaway Branch Railroad Co.—Articles of Association filed June 22, 1868. Length of proposed road, 5 miles. Located in Queens Co. Capital stock, $75,000.

Fifth Ward Railroad Co.—Articles filed October 3, 1867. 2 miles. Located in Syracuse. Capital stock, $50,000.

Flushing and North Side Railroad Co.—Articles filed April 3, 1868. Length of proposed road, 25 miles. Located in Queen's County. Capital stock, $400,000.

Fulton Ferry and Canarsie Bay Railroad Co.—Articles filed October 11, 1867. Length 3 miles, in City of Brooklyn. Capital stock, $200,000.

Gloversville, Mayfield and Northville Railroad Co.—Articles of Association February 18, 1868. Length of proposed road, 14 miles. Located in Fulton County. Capital stock, $300,000.

Goshen and Deckertown Railway Co.—Articles of Association March 18, 1868. Length of proposed road, 14 miles. Located in Orange County. Capital stock, $360,000.

Hamilton Avenue, Prospect Park and Flatbush Railroad Co.—Articles filed April 1, 1868. Length 4 miles. Located in King's County. Capital stock, $200,000.

Lake Champlain and Moriah Railroad Co.—Articles of Association filed December 4, 1867. Length of road, 7 miles. Located in Essex County. Capital stock, $200,000.

Lake Ontario Shore Railroad Co.—Articles of Association filed March 17, 1868. Length of proposed road about 140 miles. Located in Oswego, Cayuga, Wayne, Monroe, Orleans and Niagara Counties. Capital stock, $4,000,000.

Liverpool and Syracuse (Horse) Railroad Co.—Articles of Association filed January 16, 1868. Length of road, 5 miles. Located in Onondaga County. Capital, $100,000.

Middletown and Crawford Railroad Co.—Articles of Association filed August 3, 1868. Length of road, 13 miles. Located in Orange County. Capital stock, $250,000.

Monticello and Port Jervis Railway Co.—Articles of Association filed September 2, 1868. Length of road 21 miles. Located in Sullivan and Orange Counties. Capital stock, $500,000.

Montreal and Plattsburg Railroad Co.—Articles filed August 22, 1868. The property of the Plattsburg and Montreal Railroad Company, having passed into the hands of the bondholders a new company was formed under the above name. Length 23 miles. Capital stock, $1,000,000.

Newburgh and Wallkill Valley Railroad Co.—Articles of Association filed January 16, 1868. Length of road, 15 miles. Located in Orange County. Capital stock, $400,000.

Sunca Lake Branch Railway Co.—Articles filed August 17, 1868. Length 2 miles. Located in Schuyler County. Capital stock, $30,000.

Southfield Branch Railroad Co.—Articles filed September 18, 1868. Length 1 mile. Located in Orange County. Capital, $10,000.

South Side Connection Railroad Co., of Queen's County.—Articles of Association filed February 21, 1868. Length of road, 3½ miles. Capital stock, $60,000.

Syracuse and Chenango Valley Railroad Co.—Articles of Association filed April 16, 1868. Length of proposed road, 50 miles. Located in Onondaga, Madison and Chenango Counties. Capital stock, $1,000,000.

Syracuse Northern Railroad Co.—Articles of Association filed February 25, 1868. Length proposed from 32 to 45 miles. Located in Onondaga and Oswego Counties. Capital stock, $500,000.

West Shore Hudson River Railroad Co.—Articles filed October 28, 1867. Length of proposed road, 56 miles. Located in Rockland and Orange Counties. Certificate of consolidation of the Hudson River West Shore with the West Shore Hudson River Railroad Company filed ———. Length of Hudson River West Shore Railroad, 30 miles. Capital stock, $3,000,000.

Westport and Kingdom Railroad Co.—Articles filed November 12, 1867. Length of road, 5 miles. Located in Essex County. Capital, $100,000.

From the Western Railroad Gazette.

Lake Shore and Michigan Southern R. R.

Last Tuesday a meeting of the directors and the most influential stockholders of the Michigan Southern and the Lake Shore Railroads was held in Toledo for the purpose of considering a proposition for the consolidation of the two roads. The Lake Shore line is itself the offspring of a recent consolidation completed only two or three weeks ago, though the roads of which it is composed have been so long operated as a single line and by a single company that many were not aware that they were owned by separate companies. The Cleveland and Toledo Railroad, 109 miles long, with branches amounting to 79 miles of road, was leased by the Cleveland, Painesville and Ashtabula Company, whose road extended from Cleveland to Erie, 95½ miles. So the new Lake Shore Railroad owned and operated 283½ miles of railroad chiefly in the State of Ohio, a few miles only being in Pennsylvania.

The road has always been operated in connection with the Michigan Southern, and indeed could hardly do otherwise, as it has depended chiefly upon it for western business; but the value of the connection has been mutual, for the Lake Shore line is the only available eastern outlet of the Michigan Southern. So with identical interests, it seems altogether proper that the two roads should be consolidated. So it seemed at the Toledo meeting. The directors of the two companies agreed unanimously upon terms of consolidation to be submitted to the stockholders, and there is no doubt that their action will be ratified.

The consolidated line is to be called the "Lake Shore and Michigan Southern Railroad." It will have an east and west line 451 miles long, from Chicago to Erie, with branches amounting to 862 miles, and will represent a capital of about $38,000,000.

With the terminus at Erie the Michigan Southern can have the choice of two outlets to New York, the Buffalo and Erie and the Philadelphia and Erie. By the former the distance to New York is 972, by the latter 977 miles. The latter road also furnishes a connection to Philadelphia by which the distance is 902 miles. But it is reported that the Buffalo and Erie Railroad will become a part of the new road and thus secure the preference which it has hitherto had as the carrier of the Michigan Southern business.

There are some who look upon this consolidation as only a preliminary to a grander consolidation which will form a line from New York to Chicago.

The stockholders of the Michigan Southern will vote upon the ratification of the consolidation at the annual meeting, to be held in Toledo, April 28. If it is approved, it is reported that the general offices of the company will be established at Cleveland.

Morris Canal and Banking Company.

We have the report of this company for the year ending February 27, 1869. From this we learn that navigation was commenced at Jersey City and Port Delaware on the 1st of April, 1868. The canal was closed by ice on the 8th of December, which made the entire season for navigation 216 days, or 36 weeks.

The income of the company from tolls and other sources during the year was..... ..... $423,476 30

And the expenses were:

Repairs of canal & works.	$139,888 61	
Operating canal	66,688 35	
Salaries, law and other expenses.....	$33,182 95	
Less interest ..	6,918 81	
	26,269 14	
Transportation expenses..	3,539 77	
		236,385 87
Balance—profits of the business.....		$187,090 43
Balance at credit February 29, 1868.		61,090 56
Total.....		$248,180 99

Thus accounted for:

Dividends on preferred stock.....	$117,500 00
Interest on mortgage bonds.....	47,010 00
" boat loan.....	18,513 42
Depreciation of boat stock.....	2,299 99
Bad debts.....	308 60
Discount on second mortgage bonds..	200 00
State of New Jersey	25,000 00
Balance February 27, 1869.....	37,348 98
Total, as above.....	$248,180 99

The income of 1868, as compared with that of 1867, shows a decrease of $26,176 16, being a loss of a little less than six per cent. The current expenses and repairs of 1868, as compared with the expenditures for the same items in 1867, show a decrease of $50,294 40, being a gain of $24,118 24, or about seventeen per cent. The report says:

A dividend of ten per cent. upon the amount of the preferred stock has been declared, payable in scrip, redeemable in twenty years, bearing interest at the rate of seven per cent. (payable at the usual semi-annual periods for the payment of the dividends), in accordance with the recommendation of the finance committee, adopted by the board of directors. In the last annual report reference was made to the excess of the cost of the canal and its works over the amount of stock and bonds outstanding. For a series of years, as the necessity arose, expenditures have been made upon capital account, absorbing a portion of the profits; in view of the depressed trade for the past two years, and the consequent condition of the treasury, arising from that fact and the necessity which still exists to make expenditures on capital account, the directors, recognizing the right of the holders of the preferred stock to receive some evidence of the claim which they have upon the profits arising from the business of the canal, resolved to fund an amount represented by scrip, which should be equal to two semi-annual dividends upon the preferred stock, and providing for the redemption of this scrip by means of a sinking fund which will pay the whole of the scrip when it shall have become due. By a reference to the general statement hereto annexed, it will be seen that $1,111 50 of this scrip has already been redeemed.

The interest falling due on all the outstanding mortgage and boat loan bonds of the company, and the rent for the State grant ($25,000 to the State of New Jersey,) have been paid, which leaves to the credit of profit and loss, $37,348 98.

The expenditures for capital account have been as follows:

Extensions and improvements at Jersey City	$10,708 57
Do., Pt. Delaware	25,411 01
Land damages and general improvement account....	3,390 18
	$39,509 76
Which is to be credited with—	
Reduction of boat account.	$15,884 63
Sale of real estate heretofore charged to this account..	11,770 00
	27,654 63
	$11,855 13

In accordance with the requirements of the trust deed upon which the boat loan was obtained, the trustees of that loan have purchased and canceled $17,185 of the boat loan bonds, and delivered the same to the company.

Three second mortgage bonds, of $1,000 each, have been sold during the past year, leaving $15,000 of that class of securities still in the company's hands.

The competition for coal-tonnage which existed during the previous season, between some of the competing companies, was still in force at the opening of navigation, thus rendering it necessary that we should make equally low rates for transportation, which were continued until the first of September. In the early part of the month of July a general strike took place among the miners of the coal regions, which continued for more than seven weeks, causing an almost entire suspension of the coal trade and a consequent reduction of the tonnage upon the canal. After work was resumed by the miners, the trade gradually revived, and we were enabled to obtain rates of transportation which were more remunerative than before, but not sufficient to compensate for the loss which had occurred during the strike.

TONNAGE.

I. Coal.—The coal tonnage of the canal for the year 1868 was as follows:

	Tons.
Received from the Lehigh Canal	161,828
" " Railr'd at Pt. Delaware.	107,387
" " " Pt. Washington.	80,977
Total coal tonnage	350,192

of which amount 247,458 tons came to tide-water, and the balance, 102,734 tons, was delivered on the line of canal west of Newark.

II. Ore.—The total amount of ore transported on the canal was 269,672 tons; of this amount, 120,603 tons crossed the Delaware River into the Lehigh Valley, and 56,044 tons were transhipped to the Warren Railroad at Port Washington, leaving 93,025 tons belonging strictly to the way trade of the canal.

III. Total.—The total tonnage of the canal was 744,412 tons, equivalent to 44,989,737 tons carried one mile. The decrease in the total tonnage from that of 1867 is 78,507 tons.

In the winter of 1866 7 two planes were laid

with Bessemer steel rails, as an experiment, in place of iron rails. The wear upon these rails is almost imperceptible. The iron rails laid at the same time are about half-worn. We have again purchased one hundred tons of the steel rails, and laid them upon two planes and part of a third plane.

The canal is now open, and the prospects for an increased business lead to the hope that the year, upon which we have now entered, will prove more remunerative to the stockholders than that which has just closed.

GENERAL STATEMENT TO February 27, 1869.

Cost of canal and appurtenances		$3,376,472 26
Assets—		
Cash	$16,747 15	
Bills receivable, individual accounts &c.	47,011 68	
Materials	6,801 84	
Sinking fund 7 per cent. scrip	1,111 50	
		71,672 17
Total		$3,448,144 43
Capital Stock—		
Consolidated		$1,025,000 00
Preferred		1,175,000 00
Mortgage bonds		785,250 00
Boat loan bonds		249,825 00
Seven per cent. dividend scrip		111,625 00
		$3,346,700 00
Liabilities—		
Bills payable	$29,902 11	
Individual accounts &c.	30,517 40	
Dividends, coupons, &c., unclaimed.	3,675 94	
		64,095 45
Profit and loss—surplus		37,348 98
Total, as above		$3,448,144 43

President.—JACOB RANDOLPH.

Vice President.—BLAKLEY WILSON.

Secretary.—JOHN RODGERS.

Cheap Freights.

THE ABILITY OF RAILROADS TO COMPETE WITH WATER TRANSPORTATION.

We gave last week an extract from the following letter written by J. H. Moore, Commercial and General Agent of the Pittsburg, Ft. Wayne and Chicago Railway Co., at Chicago, to J. N. McCullough, General Superintendent, on the subject of cheap transportation by rail. We have been requested to publish the letter entire. Mr. Moore says:

Referring to your expressed desire to furnish cheaper transportation for the products of the West to Eastern markets, and the request for my views on the subject, I would state that I have been for many years impressed with the idea that the railroad companies between Chicago and the Atlantic cities would, with a developed country, see their way clear for remunerating dividends at reduced rates for the transportation of passengers and freights of all kinds. The lakes, rivers and canals are now considered the avenues for cheap transportation, and railroads the most expensive routes for all kinds of transit movements. The great question to be solved by railroad companies, as it appears to me, is the one of rates to compete successfully with water carriage between Chicago and New York and other Eastern cities. When the railroads can transport the staple articles of the country to market, the year round, at about the same rate per ton as the average season rates by water, from the interior to the Atlantic cities, the rail will have the preference. By refering to the Chicago Board of Trade report for the year ending with March 31, 1868, we find that the average lake tariff on wheat for the year was 8½ cents per bushel; on corn, 6.06 cents per bushel, and oats at 5 cents per bushel. If we add to these rates insurance, commissions and warehouse charges in Buffalo, and canal tolls and freights, we have a cost per bushel, on the average, of about 24 cents from Chicago to New York. The total tonnage of the following articles shipped from Chicago during the year ending as above, being, with the exception of lead, the products of agriculture, was 1,691,186 tons, equal to 140,928 car loads of 12 tons each. Of this tonnage, 1,117,512 tons was shipped from this city by water carriage. Nine hundred and sixty-four vessels, of an average tonnage of 212½ tons each, were employed during the year in all kinds of freight transportation to and from this city. Many were employed exclusively in the lumber trade. The tonnage referred to above consisted of:

	Tons.	Car loads of 12 tons each, shipped by	
		Water.	Rail.
Wheat	284,909		
Corn	747,252		
Oats	162,523		
Rye	31,000		
Barley	30,393		
Total	1,256,077	92,187	12,486
Seeds, lbs	6,336,900	264	505
Cattle, No	203,564	122	11,852
Live & dressed hogs,	1,033,118	....	12,914
Butter, lbs	2,804,177	25	93
Hides, lbs	27,739,099	452	705
Highwines, brls	34,070	45	456
Lead, lbs	4,162,074	8	165
Beef, brls	83,288	417	693
Tallow, lbs	7,165,927	72	227
Lard, lbs	27,054 529	53	964
Pork, brls	134,849	687	1,111
Cut meats, lbs	82,322,540	27	3,403
Wool, lbs	11,293,500	15	455
Sheep, No	51,616	9	507
Total car loads		94,392	46,536

The water rates to Buffalo during the season, were as follows (average): Wheat, 14 cents per 100 lbs.; corn, 10.8 cents per 100 lbs.; oats, 15 cents per 100 lbs. Canal rates from Buffalo are estimated at 23.3 cents per 100 lbs., making a total average rate from Chicago to New York, *via* lakes and canals, including 3 cents for insurance, warehouse commissions and transfer at Buffalo, of 40 cents per 100 lbs.

I think the above transportation may be arranged and carried by rail in three classes, at $7, $8 and $9 per ton for six months of the year, and during the suspension of navigation $9, $10 and $11 per ton; averaging $9 per ton throughout the year. This applied to the above tonnage, would give a gross income of $15,220,224 from this city, and estimating the west-bound freights to produce an equal income, we have the gross amount of earnings, from business to and from Chicago of $30,440,448.

During the year 1867, there were 396 313 tons of coal brought to this city by vessels. This, together with building stone, pig iron and other coarse and heavy freights, may be brought here by rail, in full trains, from the interior of Ohio and Pennsylvania, at *pro rata* per mile of the above rates, or perhaps at 1¼ cents per ton per mile, which will turn all of this transportation, from that section of the country, on to the railroads, as it appears to me, loading the return trains at remunerative rates. The increasing consumption of coal in this city is 100,000 tons annually. Thus it will be seen that full trains carrying all of the products above enumerated, in the year ending, as above stated, our road would have earned, assuming the fact that one-third of the business of the year was, and would have been, done by our line, at pro rata divisions, $5,877,812; to this add local receipts, $1,695,507, which gives us a total of $7,073,319 as the gross freight earnings for that year. If the entire lake trade, as above shown, with an equal amount of tonnage west bound, had been carried by rail, our full proportion would have averaged 179 tons per train per mile, earning $1 08 per mile per train more than the earnings per mile per train, of freight, during the year 1867. If we deduct 54 cents per mile as the cost of transporting this additional tonnage in the same trains that were run, we show a net increase of earnings per train per mile of 54 cents, making a total net additional income for the year of $1,739,602 44.

To successfully work a railroad, where the tonnage is very large, it should be provided with a double track for freight trains and another for passenger trains, and the freight should be worked at a slow rate of speed—say six or eight miles an hour, with engines especially adapted to such speed. Under an organization of this kind a single line between Chicago and New York would transport more than five times the railroad and lake tonnage for the year under consideration. The trains can be safely worked within fifteen minutes of each other, giving ninety-six trains a day from Chicago, of 300 tons each for 300 days in the year, total 8,640,000 tons. This traffic at $9 per ton, on the average, will amount to $77,760,000, and estimating west bound receipts the same we have total income, from a single line, of $155,520,000, of which our company would be entitled to $80,870,400. To economically transport this immense tonnage 30,000 freight cars, at a speed of eight miles the hour, and 35,000 at six miles the hour, and 3,000 locomotive engines, would be required. The receipts per train per mile would average $3 from Chicago to New York *via* Pittsburg. These items of tonnage and earnings multiplied by four, the number of railroad lines from this city to New York, Philadelphia and Baltimore, give an aggregate of 96,120,000 tons, counting both east and west tonnage, producing an income annually of $622,080,000. All this I mention to show that railroad lines may be worked, when the tonnage is large, so as to entirely supersede water carriage when lakes, canals and rivers must be used between the termini of a long route; and that the capacity of a single line of railway is equal, if not superior, to that of five canals, in this latitude, as the speed of the trains would be three times that of canal boat movement during the season of navigation, with the five months' winter tonnage in favor of the all rail lines.

Respectfully submitted by yours truly,
J. H. MOORE, Commercial and Gen'l Agent.

☞ The Richmond *Examiner* says the directory of the Chesapeake and Ohio Railroad Company have in contemplation the scheme of selling out to the Pennsylvania Railroad Company the State's interest in the Virginia Central Railroad, ($2,000,000) and the State's interest in the Blue Ridge Railroad, ($1,674,000) and that if the sales were made the Pennsylvania Railroad Co, would build a road from Pittsburg to Charleston, on the Kanawha, or some other point in West Virginia connecting their line with the Chesapeake and Ohio Railroad.

☞ About $242,000 of the stock of the Chartiers Valley Railroad Company have been subscribed, leaving only $80,000 to be raised. The engineers are now upon the road preparing the whole line for letting, which will be done immediately upon the raising of the balance by the people of Washington and Alleghany counties.

☞ The Philadelphia *Ledger* says that the Pennsylvania Railroad Company has obtained a controlling interest in the Indianapolis, Cincinnati and Lafayette Railroad, by the purchase of a majority of the stock.

☞ At a meeting of the directors of the New Orleans and Jackson Railroad, held at New Orleans on the 12th inst., reports were received from the President, Engineer and Superintendent, all favoring the extension of the road to Decatur.

Baltimore and Ohio Railroad.

The regular monthly meeting of the directors of this company, was held in Baltimore on the 14th inst. J. W. Garrett, Esq., President, in the chair. Upon the presentation by the committee of finance of their report recommending the declaration of the usual semi-annual dividend of four per cent. on the main stem, and five per cent. on Washington branch, and the payment of the United States taxes by the company, the President made the following remarksin relation to the financial condition of the company, and the various works of mprovement at present in progress :

Before taking the vote upon these resolutions a statement in reference to the general financial condition of the company and the progress of its works may be interesting. The board is aware that the expenditures in the various works which the company is now prosecuting, are very heavy. Upon the Metropolitan branch large forces are engaged and much work is being performed. The road from Winchester to Strasburg is under contract, and work upon nearly that entire line is also being vigorously prosecuted.

THE OHIO BRIDGES.

A large amount of preparation has continued to be made of the work for the Ohio river bridges, and the expenditures for these structures now exceed $500,000. As the board is aware, an attack was made during the last season of Congress upon the plan for the channel spans of these bridges.

It will be remembered that the bridges at Bellaire and at Parkersburgh are being constructed under an act of Congress passed in 1862, under which the Steubenville bridge, which is used by the Pennsylvania road and its connections, was also built. That bridge remains, and has not been practically attacked by those who assume that the navigation of the river will be interfered with by the bridges of the Baltimore and Ohio Company. Under the act of 1862 the water way between the channel piers is required to be not less than three hundred feet. The Steubenville bridge was so imperfectly constructed, the piers having such insecure foundations, that in order to maintain them twenty feet of rip-rapping on each side of each pier was required, so that the water way has been reduced to 260 instead of 300 feet, as required by law.

The bridge was also constructed in a bend of the river, where the water was crooked, and where there were serious difficulties in navigation, irrespective of the structure itself. The bridges planned by the Baltimore and Ohio Company have been located not only in straight water, but where, for half a mile above and below each site, there is a direct current, thus preventing the difficulties which arise from crooked water, which exists wherever the river curves. The Baltimore and Ohio Company also, instead of attempting to place its piers upon the bottom of the river, with little or no foundation, has, at great cost—and thus far under great difficulties, arising principally from the frequent rises of the river during the last season, which destroyed or damaged seriously and repeatedly its coffer dams—constructed its piers with an average depth of foundation of eleven feet, thus making them so substantial that when constructed the superstructures can be placed upon the piers and the bridges be safe without resorting to rip-rapping.

Under these circumstances the company represented to the committees of the House of Representatives and Senate that it was unjust and unreasonable because the Pennsylvania Railroad Company violated the law, that the Baltimore and Ohio Company should not be permitted to carry out its plans in strict compliance with the law. The company also, instead of selecting locations where the water was shallow, selected pools, so as to give this additional protection to navigation. Under these circumstances, after repeated presentations of the facts, the company succeeded in rescuing its rights from the perils which were threatened.

In this, as in most other cases involving adverse legislation, the efforts were inspired chiefly by rival railway interests. The company is in a position fortunately to proceed with those great works—works which are of vast importance to the country as well as to the Baltimore and Ohio railway and its connections. It will therefore be the policy of the company to press this work vigorously during the approaching season.

THE MARIETTA AND CINCINNATI ROAD.

In consequence of its embarrassed condition this company has continued to assist the Marietta and Cincinnati Company. The completion of the arching of the twenty-three tunnels on the Parkersburg branch, and the general improvement in the condition of that road, combined with the improved condition of the Marietta and Cincinnati road, under the present vigorous administration of the affairs of that company, will enable the Baltimore and Ohio Company to do that which is unprecedented in the history of travel betwixt the East and West. The company design establishing a line between Baltimore and Cincinnati via the Parkersburg branch, which will require but twenty-four hours between the two cities. This arrangement will commence with our spring schedules, and the line cannot fail to command a large increase of traffic.

REVENUES AND POLICY.

It will also be gratifying to learn that notwithstanding all the complications in the West by efforts to cut off the Baltimore and Ohio road from some of its natural connections, yet, during the past month of March, with the relations that the company have been able to maintain, and others which it has improved, whilst the revenue of the main stem and branches, in March, 1868, was $718,591 68, the revenue of the last month of March, 1869, proved to be $936,494 86—thus showing an increase for that month of of $217,-903 18. This exhibit proves that the policy of the Baltimore and Ohio Company has not been erroneous in declining to fasten upon itself, at prodigious cost, during a period of extraordinary extravagance and excitement additional western connections.

The Pennsylvania road has deemed it proper to make an agreement with a single association of financially weak roads west of Columbus by which it agrees to pay annually the sum of seven per cent. on $20,000,000 of debt, viz: $1,400,000 a year; and the supposition has been indulged that the Baltimore and Ohio Company might be cut off by such arrangement; but the power of the Baltimore and Ohio road having so strengthened and enlarged the business of the city of Baltimore enables it to command such a business for the West that upon the principle of reciprocity, on which it acts, it is in a position to *command business from* the West by a sufficient number of satisfactory and desirable routes.

PITTSBURG AND CONNELLSVILLE ROAD.

The work upon the Pittsburg and Connellsville road is progressing satisfactorily, and it is proposed to place, at an early day, all the remaining sections under contract. No effort will be spared to open this invaluable and powerful line at the earliest practicable period. That company continues to dispose of its seven per cent. first mortgage bonds at ninety per cent. It is hoped that capitalists will continue to invest largely in this desirable security.

To meet the requirements of funds for the important works in progress, the Baltimore and Ohio Company is now furnishing its preerfred six per cent. stock at par. As this security is of the very highest order, is perpetual and free from both State and municipal taxes, it offers a most reliable and inviting investment.

WASHINGTON COUNTY RAILROAD.

Among the works which the company has prosecuted to completion is the Washington county road. It is proper to state that whilst this road was undertaken measurably by this company, in view of the disappointment originally of our fellow-citizens of that portion of the State, arising from the final location of the Baltimore and Ohio road, yet it was always hoped by it friends that the enterprise might prove remunerative. The results, however, have not been satisfactory, financially. The road has been in operation from December 1st, 1867, and up to March 31, 1869—fifteen months—the earnings from passengers amounted to but $39,503 67, and from tonnage to $29,336 12, making an aggregate revenue for that entire period of $68,839 79. The actual expenses for repairs, irrespective of construction during these fifteen months, were $75,225 03, leaving a deficit of $6,385 24. This deficit exists in addition to the expenses incident to the completion of the road during the same period, viz: $52,503 69, which were charged to construction. Besides this loss, the further loss of upwards of $70,000 has been sustained, being the interest for that time at six per cent. on the capital expended in the construction of the road. Why has this disappointment arisen? It was, of course, originally understood that the Chesapeake and Ohio canal furnished abundant and cheap facilities of transportation for a large portion of Washington county, and that the Cumberland Valley road, extending also to Hagerstown, was an outlet to Baltimore, through the Northern Central road, and to Philadelphia and New York by the Pennsylvania road, and that, consequently, severe competition would occur; but that competition has proven greater than anticipated, and so great have been the facilities for transportation for the relatively small business to be obtained that it has been demonstrated that the Baltimore and Ohio Company could conveniently transport in one week all the business that it has been in its power to obtain in the fifteen months elapsed since the opening of the road.

These results have not followed because Washington county is not a great and productive region; nor because there is not a considerable business, but simply because, with the Chesapeake and Ohio canal and two powerful railway companies, prepared for a large business, a capacity of transportation exists immensely beyond any existing or possible requirements for the traffic of that region. The Baltimore and Ohio Company has the satisfaction of having met the wishes of that section of the State. Financially, however, it is proper that the true relations and losses connected with the line should be understood. Another lesson is thus furnished, showing that the true policy in building railways is not to construct parallel lines or to furnish additional railways to points whence the business cannot possibly be commensurate with the capital and facilities afforded.

DISTANT CONNECTIONS.

The policy generally pursued by this company has been to strike for *new and distant regions and for additional sources* of business. By this policy great regions are accommodated and supplied with avenues of the highest necessity and advantage, and immense amounts of traffic necessarily flow through such new channels, and aid enormously in building up the terminal points, and thus insure a legitimate and natural increase of business, which causes every interest connected with a commercial community to advance and prosper.

THE COAL TRADE.

The company has not hesitated to continue, in addition to its providing double-tracked line to the coal regions, to expend large sums in furnishing the additional equipment required for the advancement of that highly important interest. The company decided some time since to build an addition to the coal equipment of four hundred hoppers of eleven tons capacity each. Of these a large proportion have already been built and are in service. Fifteen locomotives have also been recently added to the equipment. By these means and facilities the coal trade has already swollen to a volume which exceeds 4,000 tons per day.

This quantity is now brought to our wharves continuously; and the design of the company, if its ability to so act be not checked by untoward

circumstances, is to continue to do all that is possible to develope this important trade. It will be remembered that the company, in the early part of 1868, reduced largely the tariff on coal. It will also be remembered that the demand became enormous—far beyond the expectation of the bituminous coal carrying interests. As the season advanced, it became clear that this company could readily have obtained for its then full capacity of transportation an advance of one dollar per ton on the charge made; but in the pursuit of the wise policy upon which you determined, no advance was made, and this coal was supplied continuously at the lowest possible cost, during the winter; also no change in the tariff was made. The business was unprecedentedly large, and at the opening of the navigation the demand enlarged, so that 4,000 tons per day are now required.

Another interesting and gratifying result in our community is shown in connection with this low tariff. The increase in consumption of coal by the manufacturing interests of Baltimore is very marked. In an important instance a great manufacturing interest—the Baltimore Smelting Company—is being sustained chiefly, and succeeds because, as against northern competitors, it is supplied with cheap coal, caused by the low rates of tariff of the Baltimore and Ohio Company. The manufacturing interests of Baltimore are constantly increasing, and chiefly because of the great comparative advantages resulting from an abundant supply of this fuel at low prices.

STEAMSHIP ENTERPRISES.

The progress of our steamship enterprises has continued very satisfactory. The North German Lloyd have found that such are the comparative economies and advantages of this port---especially in the cheapness of coal---that, without demanding aid from Baltimore or American interests, beyond what might be agreeable to those interests to contribute, the company has already doubled the number of ships upon the line. At this moment not only is a full cargo awaiting the next steamer, but we have the satisfaction to state that sufficient cargo is offered to load at once two instead of one of the steamers. It is therefore reasonable to anticipate that this line, which was inaugurated with two ships, and which in one year increased to four, will, in less than two years, have not less than eight first-class steamers plying between Baltimore and Bremen. The economy in the price of coal of $2 50 per ton, as compared with New York, aids largely in the success of this enterprise.

In this connection it will be interesting to state that, whilst the company has long been anxious to establish a line of first-class steamers between Liverpool and Baltimore, of larger capacity than those which have heretofore been placed upon the route, yet, in consequence of the depressed condition of the traffic between Liverpool and New York, and the unprofitable results of the lines between those ports, no satisfactory arrangement could be heretofore effected. Within the past week, however, negotiations have been opened with an important and influential foreign house which indicate that it is prepared to join this company, probably in the course of a few months, in establishing a line of the character and capacity desired.

Mr. Garrett having concluded, the vote was taken upon the resolutions offered by the committee of finance, which were unanimously adopted.

LOCUST POINT ROUTE.

The President then made the subjoined statement in reference to a route proposed to be constructed upon Locust Point:

Much objection has been made by passengers between the national capital and Philadelphia and New York to the delay in passing through the streets of Baltimore by horse power, as well as to the slow speed required in approaching Camden and President street stations. The increasing business of the city adds continuously to the use of Pratt street, and causes serious difficulties in transferring cars in the passenger and freight service between the Philadelphia and Baltimore and Ohio stations.

These embarrassments in transportation produce also much apprehension, although, with the great care exercised, but few accidents have occurred. Under these circumstances the company have sought most carefully for a plan which would prove permenently for the interests of the community, and accomplish, in the mose convenient manner, the rapid transfer demanded by the public interests. Our engineers and officers, in conjunction with the Philadelphia, Wilmington and Baltimore company, have unanimously decided that the true route will be upon the peninsula of Locust Point, where the population is relatively limited, and where the construction and facilities of the railroad will advance the value of property and promote the convenience of the people. The company, for the reasons stated, has secured the property that will be necessary to accomplish the desired object. It will become necessary, in carrying out the improvement, to open a street and obtain authority for its use.

So far as has been learned, the line proposed meets very generally with the approval of those interested. The Baltimore and Ohio Railroad Company can thus construct a very direct route to a point east of the European steamship piers. Between this site and Canton the passenger trains from and to Washington can be readily and rapidly transferred in barges by the use of steamtugs, as has been so successfully done for two years past by the company over the Ohio river at Bellair and Parkersburg. This system will solve a problem of great interest to the citizens of Baltimore. It will also enable the company to transfer its freight with economy and dispatch. This line can also be advantageously used for the transfer of freight to and from the Northern Central road, and thus to an important extent relieve the track upon Howard street. As it is clear that it is the interest of the Northern Central company to build a road to tide for its coal traffic, it is evident that when such a line is built the transfer suggested can be advantageously made. The New Jersey and Camden and Amboy companies also unite in the desire to have this improvement in the line effected

As the board is unanimous in their judgment regarding the importance and desirableness of the improvement, the chair suggests the appointment of a special committee, to be composed of the city directors, to present the subject for the consideration and action of the city councils. The proper notice required by law in such cases has been duly given, and the application can, therefore, be at once considered. If the requisite authority be promptly granted, it is contemplated that the line will be placed in operation during the present season.

[In accordance with the suggestion of the chair a resolution was unanimously adopted appointing the city directors a special committee to present the subject to the councils for their consideration and action.]

VIRGINIA VALLEY RAILROAD.

After the transaction of other general business the chair referred, as follows, to the Virginia Valley and Lynchburg and Danville railways:

There are two subjects in connection with railway improvements of vital importance to this community, which will be presented at an early day in a manner that will attract great public attention. The aid of the Baltimore and Ohio Company to the Winchester and Strasburg road will effect the opening of the line to Harrisonburg during the next autumn. There will then be a gap of but 113 miles from Harrisonburg to Salem—the construction of which will not only open the business of the magnificent Valley of Virginia, but also open, under the most favorable auspices and influences, a great line to New Orleans, which will largely command the traffic of the vast intermediate territory.

A second gap, of but sixty miles, exists between Lynchburg and Danville, the filling of which will connect the Orange and Alexandria road with another highly important system of Southern railways, by which an enormous business will necessarily be directed to Baltimore which now goes to the coast. The leading citizens in those sections are extremely anxious to get these roads constructed. They want, in view of the advantages to their regions, enlarged commercial intercourse with Baltimore. They are willing to contribute largely for the work themselves. The counties upon the Valley line propose to subscribe $1,200,000. They propose to ask the city of Baltimore to subscribe a million to their stock.

The Lynchburg and Danville interests propose to supply all that will be requisite but half a million. This sum they wish to obtain from the city of Baltimore. Under these circumstances large delegations of the most eminent citizens in Virginia it is expected will visit Baltimore about the 21st of this month, to confer with the authorities and citizens of Baltimore. It will be seen, as a mere railroad question, that the Baltimore and Ohio Company has but little interest in these extensions, whilst incalculable benefits would result from their construction to the business interests of Baltimore. As this company is now engaged in enterprises for the prosecution of which all its resources are required, those connected with it can only aid as citizens, and co-operate to secure the requisite capital. It has been found heretofore impossible to obtain the large sums necessary for such works from individuals. Therefore the only practicable plan appears to be for the city to render the necessary assistance. It is the judgment of many who have carefully considered the subject that if the city of Baltimore can, by subscribing $1,000,000 to the Valley line and $500,000 to the Lynchburg and Danville line, secure their construction, and thus open these direct and first-class avenues to Baltimore, that this community will absolutely gain in advantage and net profits on the vast business that will be thus commanded not less than the aggregate amount ($1,500,000) in each and every year after their completion. In that judgment the chair fully accords. It is stated that three hundred delegates will visit Baltimore. If, when those gentlemen arrive, full co-operation is extended, and the facts and interests connected with these great subjects be presented and understood in the community and in the city councils, and aid be granted, it will undoubtedly lead to results in the commercial progress of Baltimore as important and valuable, in connection with the Southern trade, as the developements and extensions of the Baltimore and Ohio road are bringing about with the trade of the West, the Northwest and the Southwest. The chair feels that the importance and magnitude of the interests involved in these enterprises cannot be too earnestly urged.

The Board then, having got through with its business, adjourned.

Windsor and Annapolis Railway.

According to the recent report of the engineer of this company, 79 miles out of the 84 had been passed as finished, and it is proposed to open 70 miles of this for the summer traffic. The iron bridge at Windsor, when finished, will be the second on the Continent in size and importance, and probably one of the most difficult pieces of engineering that has been undertaken. In length and dimensions of iron girders, it is only surpassed by the Victoria Bridge at Montreal, over the St. Lawrence. The Windsor Bridge is in a very forward state of completion.

☞ It is proposed to build the Rensselaerville and Berne Railroad from near Schoharie through the towns of Wright, Knox, Berne, and Rensselaerville, to the south line of Albany county. The officers of the company are; Wm. R. Tanner, President, Franklin Frisbee, Treasurer; F. C. Huyck, Secretary.

American Railroad Journal.

Saturday, April 24, 1869.

Stock Exchange and Money Market.

Money has been in much more liberal supply, since our last, and rates have yielded materially, call loans having receded to the uniform price of 7 per cent. in currency, and very choice to good discounts ranging from 7@10 per cent. per annum. At these rates, the demand has been much less urgent from all sources, though the city banks reduced their loan and discount averages over 2¼ millions, and their circulation $172,591. The banks made an important gain in their legal tender reserve, to which $2,356,556 were added, during the week. Their deposits were also augmented nearly three-fourths of a million. They were greatly strengthened and prepared for the call from the Comptroller of the Currency, for a retrospective statement of their condition, which call was formally made on Tuesday, the 20th inst., and made applicable to the business standing of the banks of the whole country on Saturday, April 17. The Sub-Treasury was about equal in its receipts and disbursements, last week. Its receipts thus far in the current week fell behind its daily payments on all accounts. The coin interest disbursements are on an enlarged scale, as well for July, as for May coupons, with the rebate of 6 per cent. per annum. As being desirable for reference purposes, we give place to the following statement of the prices of money, from March 25th, to April 17th, inclusive, or through the recent severe Money pinch:

March 25—7 per cent. Gold.

March 26, Good Friday—Exceptional transactions at 7 per cent. Gold.

March 27—7 per cent. Gold.

March 29—7 per cent. Currency and commissions of 1 16 and ⅛.

March 30—⅛ flat to ⅛ and 7 per cent. interest in Currency.

March 31—1-16 and 7 per cent. interest Currency to ⅛ and 7 per cent. interest Gold.

April 1—⅛ and 7 per cent. Currency to ¼ and 7 per cent. interest Gold.

April 2—⅛ and 7 per cent. interest Currency to ¼ and 7 per cent. interest Gold.

April 3—1-16 and 7 per cent. interest Currency to ⅛ flat.

April 5—3 32 flat to ⅛ flat.

April 6—⅛ flat to ⅛ and 7 per cent. interest Currency.

April 7—⅛ flat to ⅛ and 7 per cent. interest Currency.

April 8—1-16 and 7 per cent. interest Currency to 3-32 and 7 per cent. interest Currency.

April 9—1-32 and 7 per cent. interest Currency to ⅛ flat.

April 10—1-16 and 7 per cent. interest Currency to 3-32 and 7 per cent. interest Currency.

April 12—1-16 and 7 per cent. interest Currency to 3-32 and 7 per cent. interest Currency.

April 13—1-32 and 7 per cent. interest Currency to ⅛ flat.

April 14—7 per cent. Gold to 1-32 and 7 per cent. interest Currency.

April 14—7 per cent. Gold.

April 16—7 per cent. interest Currency to 7 per cent. Gold.

April 17—7 per cent. interest Currency.

It will be observed that over 75 per cent. of the transactions noted were consummated at the higher rates named for each day, excepting on April 1 and 2, when loans were made in about equal amounts at the two rates; the lower rates in every instance prevailed toward the close of banking hours, the reason for which is obvious. The above quotations are solely applicable to call loans on the customary marginal collaterals.

The specie reserve of the city banks is now $7,818,779, against $16,776,642 same time last year. The city bank deposits are now $172,208,494, against $181,832,523 week ending April 18, 1868. The legal tender reserve amounts to $51,001,288, against $59,833,660 same time last year. The circulation now stands at $34,436,769, against $34,218,581 same time last year. The loans are now $255,184,882, against $254,817,986 at this date last year. The Bank Exchanges at the Clearing House through the past week, averaged $128,727,550 a day, against a daily average of $135,009,409 the preceding week, and $139,737,282 the week ending with March 31, 1869. The current week's exchanges average about $141,000,000 a day. The city banks, last week, reported a further loss of $982,764 of specie, with a gain of $707,914 of deposits, and of $2,356,556 of legal tender notes. They reduced their loans, $2,295,345; and their circulation, $172,591.

National Bank notes to the amount of $305,880 were issued last week by the Treasury Department, making the total issue to 1,685 banks thus far, amount to $314,102,686, against $282,555,440 at the close of the fiscal year ending June 30, 1866. From the total issue is to be de-

ducted the currency returned, including worn out notes, amounting to $14,301,951, leaving, with the existing 1,626 banks, (having an aggregate capital of $418,858,931,) an actual circulation at this date, of $299,800,735. The United States bonds held by Treasurer Spinner in trust for National Banks as security for circulating notes amount to $342,698,800; and for the public deposits, $30,558,350—making a total of $373,252,150. The Treasury Department last week redeemed and destroyed $500,900 of worn and mutilated fractional currency, and issued $403,150 of new. The outstanding amount of fractional currency on the 1st of April, 1869, was $36,719,912, against $36,781,548 on March 1, 1869, $35,511,127 on Feb. 1, and $34,215,716 on the 1st of January.

The U. S. Sub-Treasury receipts, week ending with April 18, were $5,610,469, including $2,391,842 from customs duties; payments, $5,373,388, including $655,084 of coin interest; balance at the close of the week, $89,972,277, against $89,735,196, at the close of the preceding week, showing an increase of $237,081. The business of the Office during the first two business days of the current week, was as follows: On Monday, receipts, $2,778,931, including $418,307 from customs; payments, $4,023,743, including $454,868 of coin interest. On Tuesday, receipts, $1,462,843, including $482,000 from customs and payments $1,558,421, including $222,516 of coin interest. The balance at the close of business on Tuesday stood at $88,631,886, against $89,857,966 a week previous; and $87,611,300 on March 31, 1869. The aggregate receipts of the office in March were $40,051,331, including $18,241,405 from customs, aggregate payments, $40,897,476, including $3,698,831 of coin interest.

The outstanding amount of coin certificates on the 1st of April was $21,672,500 against $28,775,560, March 1; $32,659,520 on Feb. 1, and $27,036,020 on the 1st of Jan., 1869. The Sub-Treasurer at this port issued, last week, coin certificates to the amount of $418,000, and retired $2,272,842 through the receipts for customs. The coin certificates issued by the Sub-Treasury office, during March, reached $1,793,180.

Government revenues keep up to a fair average yield. In a few weeks the excises will be augmented by the payment of May taxes. The excises, last week, yielded about four millions; customs at the port of New York, $2,391,842 and at the outports about $800,000 (in coin) more, making the grand total income for the week equal to about $8,309,000 in currency. The total receipts of the National Treasury, from excises, during the fiscal year ending with June 30, 1868, were $191,180,564. The receipts from the same source, thus far in the current fiscal year, commencing with July 1, 1868, have been about 122 millions, according to the latest Washington advices.

Gold has been decidedly brisker, the speculative demand having been quite spirited, under the various war rumors and the derangement of our exchanges, which are again working against us. The range of the week has been from 132¾@134⅜, and the closing quotation on Wednesday was 134⅛. The export inquiry has been very light, that from importers for custom house purposes has been less active. On the other hand, imports of foreign specie to the amount of $2,420,737 have been reported, during the week, making the total imports, since Jan. 1, $7,187,685, against $2,580,164 same week last year. The *Weser* on Monday brought hither equal to $86,000 in foreign specie, and the *City of Antwerp* on Tuesday equal to $100,000. The *Alaska* arrived at this port on Wednesday from Aspinwall with a treasure freight of $532,086.

The Gold Exchange Bank clearances on Wednesday, were $41,092,000, and the resulting balances $1,622,798 in coin, and $3,127,504 in currency.

The average amounts of the Gold Exchange Bank loans and discounts last week was $1,107,821, average amount of specie $419,738, average amount of deposits $912,671.

The customs demand for Gold last week, averaged $398,641 a day; thus far, this week, it has averaged $450,500 a day, or equal to a weekly aggregate of $2,703,000. The arrivals of specie from Europe, Havana and other foreign ports, during the week were $2,420,737, and since Jan. 1, $7,187,685, against $2,589,164 same time in 1868. The receipts from California, last week, were $532,086. The total customs revenue of the Government, in coin, at this port, from July 1, 1868, to date was $101,258,005, against $91,437,202 same time in the preceding fiscal year. At San Francisco, from Jan. 1, to Mar., 16th 1869, $1,543,675, against $1,728,595 same time last year.

The total receipts of California gold at this port, since July 1, 1868, have been $17,330,429, against $27,124,299 same time in fiscal year 1867–'68, showing a decrease in the current fiscal year, of $9,794,570. The exports of specie, from this port, last week, were $68,575, against $1,625,498 same week last year; total, since July 1, 1868, $31,524,940, against $46,075,185 in 1867–'68. Government disbursed last week through the U. S. Sub-Treasury here, on account of the coin interest on the public debt $655,084; since July 1, 1868, $68,046,720, against $54,572,162 same time in 1867–'68. The specie exports from San Francisco, from Jan. 1, to March 16, 1869, were $8,830,892, against $7,490,417 same time in 1868.

Foreign Exchange has been less freely offered and has been in more request at advanced prices. Bankers' prime sixty day bills on London closed on Wednesday at 108¼@108⅛, and on Paris to 5.21¼@5.20; sight bills on London to 108¾@109⅛, and on Paris to 5.18¾c.@5.17½. The offering of produce bills has been fair this week. The week's exports of domestic produce and miscellaneous goods from this port have been to the currency value of $3,689,819, against $4,111,405 same week last year; total, since July 1, 1868, $131,021,479, against $146,610,140 same time in preceding fiscal year of 1867–'68.

Government securities have been in very moderate supply, and have been quite freely sought after, chiefly by local buyers, at an average advance of ¾@1 per cent. The main inquiry has been for the 1862, 1865 and 1867 Five-twenties, and for the U. S. Currency Sixes, issued in aid of the several Pacific Railroad enterprises. There has been likewise a good call for the Ten-forty coupon bonds. The general market closed firmly on Wednesday, on the basis of our revised quotations.

U. S. sixes of 1881 closed here on Wednesday at 117½@117⅝; U. S. Five-twenties of 1862, 121@121¼; U. S. Five-twenties of 1864 at 116⅛@116¼; U. S. Five-twenties of 1865 at 118@118¼; U. S. Five-twenties of 1865, consolidated, 115⅜@115½; U. S. Five-twenties of 1867, 115¼@115½; U. S. Five-twenties of 1868, 115¼@115⅜; U. S. Ten-forties at 106⅛@106¼; U. S. Six per cent. currency bonds, 104¾@104⅞.

The latest quotations at the London Stock Exchange compare as follows with former returns:

	April 7.	April 14.	April 21.
Consols	93⅛	93⅜	93¼
U.S. 5-20's of 1862	83⅝	84	*80⅝

Ill. Central	96¾	96¾	98½
Atl. and Gt. Western.	....	30½	....

* Ex May Coupon.

Railway and miscellaneous stocks have been decidedly more active at a further notable improvement in prices, closing strong and buoyant.

There has been a moderate business reported in nearly all kinds of domestic produce, including Cotton and Breadstuffs at generally easier rates, and provisions at buoyant prices. Middling upland cotton closed heavily on Wednesday at 28⅛@28¾ cts. per lb. The stock of cotton now here is estimated at about 102,500 bales. The receipts at the port this week, have averaged about 1,400 bales a day. The receipts at all the ports, since Sept. 1, 1868, have been 1,994,000 bales, against 2,018,500 bales same time in 1867–'8; exports, same time 1,109,000 bales, against 1,315,000 bales same time in 1867–'8; stock on hand at latest dates, 352,500 bales, against 254,000 bales same date 1868. Total crops of 1867–'8, 2,430,893 bales; total receipts at ports year ending Sept. 1, 1868, 2,240,282 bales; total exports thence, same time, 1,657,015 bales. The exports of domestic cotton goods from this port, since Jan. 1, have been 8,380 pkgs., against 8,298 pkgs., same time last year. From Boston, 3,322 pkgs., against 4,360 pkgs. same time in 1868. At the Live Stock markets, this week, Beeves have been quiet and heavy at from 10@17c., per lb.; week's receipts, 6,147. Milch cows dull at $40@$124 each, receipts, 65. Veal calves in less request and easier, at from 8@12c. per lb.; receipts, 1,266 Sheep and lambs moderately inquired for at from 5½@10c., per lb., as extremes; receipts, 20,185. Swine fairly active, but close lower at from 10¾@11¼c. per lb., all live weight; receipts, 13,780. Foreign merchandise has been in less request and less buoyant. The total imports of foreign dry goods, last week, were $2,263,406, and the total amount marketed $2,253,597. The value of foreign merchandise imported last week, was $5,294,761—making the grand total specie value of last week's imports of dry goods and merchandise, equal to $7,558,167, against $4,660,449 same week last year; total since July 1, 1868, $223,016,462, against $190,103,457 in 1867–'8. The freight market has been moderately active, closing steadily. For Liverpool we quote flour at 1s. 3d. by sail, and 1s. 6d. by steamer, per bbl.; grain at 2d. by sail, and 2½d.@3d. by steamer, per bushel; cotton at 1/16d. by sail, and 3/16d. by steamer, per lb.; and heavy goods 10s.@25s. by sail, and 10s.@30s. by steamer, per ton. Total number of vessels in port on Wednesday, 571.

The New York exports, exclusive of specie, for the week ending April 20, and since the beginning of the year, compare as follows:

	1868.	1869.
For the week.....	$4,111,405	$3,689,819
Prev. reported.....	50,208,027	44,599,494
Since January 1..... ..	$54,319,432	$48,289,313

The imports for the week ending April 17, and since the beginning of the year, have been as follows:

	1868.	1869.
Dry goods	$1,261,409	$2,263,406
Gen. merchandise..... ..	3,399,049	5,294,761
Total for the week.....	$4,660,458	$7,558,167
Previously reported....	65,850,660	85,350,177
Since January 1..... ..	$70,511,118	$92,908,344

The balance in the Sub-Treasury on Wednesday was $89,049,960.

☞ The dividend periods of the Central Railroad Company of New Jersey have been changed to January and July.

Chicago and Alton Railroad.

On the 5th inst., the annual meeting of this company was held in Chicago for the election of three directors in place of William F. Weld, John A. Sewart and Peyton R. Chandler, whose terms expired on that day. These gentlemen were all re-elected. The Board now stands as follows:

Until April 4, 1870—John Crerar, Chicago; Lorenzo Blackstone, Norwich, Conn.; James J. Mitchell, Alton.

Until April 3, 1871—T. B. Blackstone, Chicago; James G. Garner, New York; John B. Drake, Chicago.

Until April 1, 1872—William F. Weld, Boston; John A. Stewart, New York; Peyton R. Chandler, Chicago.

☞ $1,000,000 GOLD.—FIRST MORTGAGE BONDS of the St. Louis and St. Joseph Railroad of Missouri.—Both Principal and 6 per cent Interest Gold. Payable May and November 1st, at the Farmers' Loan and Trust Co., in the City of New York, who are the Trustees for the Bonds. Length of road, 72¼ miles. Total amount of Bonds is $1,000,000, which is less than $14,000 per mile, and secured by a first mortgage on the whole road and entire property of the Company.

The interest on these Bonds is the same as on United States 5-20s, 1862, also due at same time; and, according to present prices, $1,000 5-20s will sell for $300 over our price for $1,000 St. L. & St. J. R. R., while the latter is equally as good security in every respect.

Present price 87½ and accrued interest in currency. For pamphlets and further particulars, apply to TURNER BROTHERS, Bankers, No. 14 Nassau-St., New York.

☞ Jacob F. Randolph Esq., has been elected President of the Morris Canal and Banking Co., Mr. R. is represented as an energetic, economical man, intimately acquainted with the business of the canal, having been its Vice-President and Superintendent for the last two years. The following directors were elected to serve for five years, in place of class No. 4; A. L. Hodgdon, Simon Gratz, Mark Devine, Jno. F. Blandy, and Thomas N. McCarter; and Thomas J. Megear to fill a vacancy in class No. 3.

☞ The directors of the Great Western (Ca.) Railway Co. have decided upon recommending a dividend for the half year ending January 31, last at the rate of 5 per cent. per annum, free of income-tax, reserving £3,000 for the renewal of ferry steamers, and carying forward to the current half-year the sum of £2,577 17s. 1d. In the corresponding period of the previous year the rate was 4½ per cent. Thus the present dividend is ½ per cent higher.

☞ The Cincinnati, Hamilton and Dayton Railroad Company have declared a dividend of five per cent. in scrip, free of tax, convertible into bonds of the Dayton and Michigan Railroad Company at par, in sums of one thousand dollars, bearing interest from April 1, 1869, payable at the American Exchange National Bank, on and after the 27th inst.

☞ Ground has been broken for the railroad from the Norwalk and Danbury Railroad to Ridgefield, in Fairfield Co., Conn.

Commerce of New York.

The foreign imports at New York for the month of March, 1868 and 1869, are officially stated as follows:

	1868.	1869.
Entered for consumpt'n.	$11,999,520	$17,890,058
Do. for warehousing	12,391,596	13,428,793
Free goods	821,682	1,702,591
Specie and bullion	1,299,776	1,771,668
Total entered at port	$26,512,934	$34,793,290
Withdrawn fr. wareh'use	10,296,124	9,661,447

The foreign imports at New York for the three months from January 1, were:

	1868.	1869.
Entered for consumpt'n.	$30,241,403	$43,794,286
Do. for warehousing	28,337,459	31,356,347
Free goods	2,318,755	4,186,765
Specie and bullion	1,852,225	3,875,701
Total entered at port	$62,749,842	$83,163,099
Withdrawn fr. wareh'se.	26,077,087	28,048,465

The foreign imports at New York for the nine months ending March 31, were:

	1868.	1869.
Six months	$116,072,182	$123,552,971
January	15,418,571	22,542,529
February	20,818,337	25,827,280
March	26,512,934	34,793,290
Total for 9 months	$178,822,024	$206,716,070
Deduct specie	3,601,868	6,922,190
Total mdse.	$175,220,156	$199,793,880

The duties received at New York for nine months ending with March, were:

	1868.	1869.
Six mos.	$54,731,301 44	$57,845,963 97
Jan.	7,133,428 42	9,615,894 48
Feb	9,696,752 89	11,996,628 46
March	11,195,861 33	13,027,672 02
Total 9 months.	$82,757,343 58	$92,486,158 83

The exports from New York to foreign ports in the month of March, were:

	1868.	1869.
Domestic produce	$12,882,808	$11,942,672
Foreign free goods	24,761	31,102
Do. dutiable	655,881	615,121
Specie and bullion	3,694,912	2,389,968
Total exports	$17,258,362	$14,978,863
Do. exclusive of specie.	13,563,450	12,588,895

The exports from New York to foreign ports for three months from January 1, were:

	1868.	1869.
Domestic produce	$40,192,978	$35,122,537
Foreign free goods	73,828	44,008
Do. dutiable	1,766,560	1,400,179
Specie and bullion	15,248,562	8,836,431
Total exports	$57,281,928	$45,403,155
Do. exclusive of specie	42,033,366	36,566,724

The exports (exclusive of specie) from New York to foreign ports for nine months ending with March 31, were:

	1868.	1869.
Six months ending January 1	$91,143,385	$80,651,068
January	14,448,327	13,153,017
February	14,021,589	10,824,812
March	13,563,450	12,588,895
Total mdse	$133,176,751	$117,217,792
Add specie	42,454,848	30,574,430
Total exports 9 mos	$175,631,599	$147,792,222

☞ The Washington *Intelligencer* says that on the portions of the Metropolitan Point of Rocks Branch of the Baltimore and Ohio Railroad in the district limits and adjacent thereto, the work is progressing quite rapidly, there being about three hundred men employed within a few miles of the city, who have already laid the rails for some distance out. It is expected, notwithstanding portions of the work are very heavy, that the road will be in running order to its junction with the main stem before next winter.

Journal of Railroad Law.

RAILROAD COMPANIES—INJURY TO MIROR CAUSING DEATH—MEASURE OF DAMAGES.

The simple facts in the late case of Potter *vs.* The Chicago and North Western Railway Co., are that the plaintiff's intestate, Frances L. Bishop, was killed by the defendant's negligence. She was at the time of the accident in her 12th year. The question of damages in such cases is ably set forth in the opinion of the court by

Downer, J.—The principle question in this action relates to the rule of damages. The action is brought under sections 11 and 12, ch. 135. R. S. The provisions of the statute, so far as any questions arise in this case, are in substance the same as Lord Champbell's act 9 and 10 Vic., ch. 93. The plaintiff was entitled to recover such damages, not exceeding five thousand dollars, as the jury might deem fair and just in reference to the pecuniary injury resulting from the death of the daughter, Francis L. Bishop, to her parents. The statute does not say, in terms, on what principle the damages are to be assessed. But all the authorities are to the effect, that vindictive damages are not to be given; nor are they to be given for loss of society, or as a *solatium*, or for injury to feelings; but they must be calculated in reference to a reasonable expectation of pecuniary benefit, as of right or otherwise, from the continuance of the life.

It was for the jury to determine what was the extent, under the proof in this case, of such reasonable expectation. The verdict must, however, be based upon evidence. The statute is peculiar, and much must be left to the sound judgment and discretion of the jury. But we do not think it was intended they should find a verdict for damages without evidence of pecuniary loss. What is the testimony as to such loss to the parent in this case? It is, that the deceased was aged eleven years and three months; that she a bright, intelligent girl, strong and healthy, had been to school and Sunday school, was a good girl to work, and accustomed to help her mother. This is all, and it is sufficient on which to base a verdict for any reasonable sum for loss of the services of the deceased during her minority. But we are unable to see anything in the evidence proving, or tending to prove, a reasonable expectation of *pecuniary* benefit to the parents from the continuance of the life of their daughter beyond her minority. If it had been proved that the pecuniary circumstances and health of the parents were such as to render it probable that they might need the services of the deceased, or aid from her, after she was twenty one years of age, a foundation would have been laid for damages other than those resulting from the loss of her services during her minority. On the other hand, if the pooof had shown that the parents were wealthy, there would have ordinarily been, it appears to us no reasonable expectation to them of pecuniary benefit from the continuance of the life of the deceased beyond her minority. It is clear that the estate and condition of the parents might have much to do with the question of damages. So far as we have examined, in suits like this for the benefit of parents, where damages have been recovered other than the value of the services of the deceased during minority, there has been testimony showing the condition of such parents or tending to prove it. See Dalton *vs.* S. E. Railway Co., 98 E. C. L., 296. There are authorities to the effect that the damages, whatever the condition of the parents, ought to be limited to the value of the services of the deceased in case she had lived during her minority. Telfer, adm'r *vs.* The N. R. Co., 30 N. J. Law R., 188. But the weight of authority is, that the jury may take into account the reasonable expectation of pecuniary benefit from the continuance of the life beyond the minority; and such, we think, is a reasonable construction of the statute. But there must be some testimony on which to base such reasonable expectation of pecuniary benefit. The jury are not to take it for granted without evidence or to *guess* at it. They are to find such benefit, and the extent of it, from the evidence, and are limited to such *proximate* damages as will actually result. Tilley *vs.* H. R. R. Co., 27 N. Y., 289.

The circuit court instructed the jury: "You are not limited to the simple value of her services until she arrives at maturity, but may take into consideration the reasonable expectation of pecuniary advantage of the next heir (in this case the father and mother), that would have resulted to them from her living, and damages may be given in respect to that expectation being disappointed, and the probable pecuniary loss or injury resulting therefrom; but you must be satisfied that the next of kin in this case sustained pecuniary injury in that respect, because you are limited to allowing for pecuniary injuries only, and to such as you believe will actually result to them as the proximate damages of such death." This instruction is put with proper limitations in case there had been any evidence of the condition and circumstances of the parents. But when the jury were told that they were not limited to the simple value of her services during minority, they must have understood that in the opinion of the court the mere evidence of the age, the moral, intellectual and physical condition of the deceased, and that she had parents living, was enough to authorize them to find a verdict for more than the value of her services during minority. If the instruction is correct, then the jury in all cases, even where the parents are in the most affluent circumstances, may give damages beyond the value of the services of the deceased during minority. Is there any reasonable expectation of *pecuniary* aid to wealthy parents, or even to those in moderate circumstances, between the extremes of poverty and wealth, from their children after they arrive at their majority? In the natural course of events, the children of such parents receive far more pecuniary aid or benefit from their parents, than their parents from them. It appears to us, unless the the condition of the parents is in evidence, the damages should be limited to the services during minority. We think, therefore, there was error in giving the instruction.

There was also error charging the jury that if they should find that the deceased or her mother were guilty of slight negligence only in getting off the cars, and the defendant guilty of gross

negligence, the plaintiff could recover. Negligence proximate or contributing to the injury, however slight, prevents recovery.

By the Court.—The judgment reversed, and a *venire de novo* awarded.

From the Louisville Courier-Journal.

Southwestern Railroad.

SPARTA, TENN., March 30, 1869.

Mr. W. H. Chelf, Greensburg Ky.:

SIR—Yours of the 18th inst., reached me last night, and I reply without delay.

I am pleased to learn that Larue county has voted a subscription to your railroad. I feel now that the construction of the great line of road connecting Louisville with Huntsville, Montgomery, Selma and Mobile is a fixed fact.

On the Tennessee side we have 37 miles already completed, extending from Tullahoma, on the Nashville and Chattanooga road, to McMinnville; thence we have 30 miles more under contract, and in the course of actual construction. We have four hundred hands on the road and will soon have a much larger force on it. The contractor (Mr. Davenport) agreed with the company to complete this section of 30 miles by the 1st of September next.

The Board of Directors had a meeting in February last and ordered the contractor to place a sufficient force on the road to complete this section by the 1st of September next. This will extend the road four miles north of Sparta, in the direction of the Kentucky line. From McMinnville to the Kentucky line, in the direction of Burksville, is 84 miles. The following are our means to build it:

By the charter per mile, $12,000	$1,008,000
By a recent act of the Legislature for construction	300,000
White county public subscription	100,000
Bridge money by State law	200,000
By private subscription	60,000
Overton county, Tenn., by public subscription	160,000
Total	$1,828,000

Making in all an aggregate of one million eight hundred and twenty-eight thousand dollars.

We have, also, almost an absolute certainty of $50,000 public subscription by the county of Putnam, through which the road passes.

We have propositions from several iron companies to furnish the iron for the entire road and take the bonds of our State in payment—this is equivalent to increasing our capital to a large amount, so I may safely assert that in the construction of the 84 miles to the Kentucky line we command a capital of $2,078,000, equivalent to $24,265 per mile. Besides this, the public men of the State regard this as a great leading trunk road, connecting the cities on the upper Ohio and the lake with Mobile on the Gulf.

Gov. Brownlow, in his last message to the Legislature of the State of Tennessee, recommended an appropriation sufficient to construct it, styling it the road of which the Hon. Senator Parker is President. This recommendation had positive strength in our Legislature to carry it through. It passed the Senate, but Nashville interest, by log rolling, defeated it by four votes in the House. We think, it will be passed at the next session, and confidently hope that by the 1st of January next we may have the whole line under contract with sufficient means to build it. We will not disguise the fact that we have sought a connection with the North and Seaboard *via* Danville and Cincinnati.

We are, nevertheless, pleased to know that Louisville is willing to greet us at the line. Our road is a necessity to us and to the State, and we are resolutely determined to build it. If Louisville meets us at the line a great reward will be hers. She will secure the commerce of the rich tier of counties south of Sparta, Tennessee, a large trade from Northwest Georgia and North Alabama, and very soon she can reach the Gulf at Mobile and Pensacola. The line of our road from Tullahoma to the Kentucky line, a distance of one hundred and twenty-one miles, lies near the base of the Cumberland Mountain, on its western slope, throughout nearly its entire length, along which the finest stone-coal crops out, and iron ore and timber are abundant. It passes through a fine stock and grain region and through as fine a fruit region as any in America. The country abounds with water-power for driving machinery, and with a railroad to develope them its resources are immense. By this connection Louisville may command them. The trade of the southern counties of Tennessee, Northwest Georgia, and North Alabama would build up Louisville and enable her to rival Cincinnati in population and trade; no wonder then that she is reaching out to gather this golden harvest. If she secures it now, there will be much difficulty in wrestling it from her. It now goes to Nashville, Memphis and other points.

I am a director of the company and the attorney for the road, and speak what I know. No doubt exists here among well informed men of our ability to construct the road. We are decidedly in earnest, and determined to do it, nor do we doubt that you will meet us at the line. The important interests concerned must accomplish the work.

I am sir, very respectfully,
Your obedient servant,
E. L. GARDENSHIRE.

I am the president of the road, having been recently re-elected. I have read the letter and the foregoing answer thereto, and fully concur in its statements of facts.

SAMUEL PARKER, President
Southwestern Railroad Company.
March 30, 1869.

New York Bridge Co.

The following is an official copy of the Act passed by the National Legislature to establish a bridge across the East river, between the cities of Brooklyn and New York, a post road:

Be it enacted, etc., That the bridge across the East river, between the cities of New York and Brooklyn, in the State of New York, to be constructed under and by virtue of an act of the Legislature of the State of New York, entitled "An act to incorporate the New York Bridge Company for the purpose of constructing and maintaining a bridge over the East river, between the cities of New York and Brooklyn," passed April sixteenth, eighteen hundred and sixty-seven, is hereby declared to be, when completed in accordance with the aforesaid law of the State of New York, a lawful structure and post road for the conveyance of the mails of the United States: *Provided*, That the said bridge shall be so constructed and built as not to obstruct, impair, or injuriously modify the navigation of the river; and in order to secure a compliance with these conditions, the company, previous to commencing the construction of the bridge, shall submit to the Secretary of War a plan of the bridge, with a detailed map of the river at the proposed site of the bridge, and for the distance of a mile above and below the site, exhibiting the depths and currents at all points of the same, together with all other information touching said bridge and river as may be deemed requisite by the Secretary of War to determine whether the said bridge, when built, will conform to the prescribed conditions of the act, not to obstruct, impair, or injuriously modify the navigation of the river.

Section 2. *And be it further enacted*, That the Secretary of War is hereby authorized and directed, upon receiving said plan and map and other information, and upon being satisfied that a bridge built on such plan and at said locality will conform to the prescribed conditions of this act, not to obstruct, impair, or injuriously modify the navigation of said river, to notify the said company that he approves the same; and upon receiving such notification the said company may proceed to the erection of said bridge, conforming strictly to the approved plan and location. But until the Secretary of War approve the plan and location of said bridge, and notify said company of the same in writing, the bridge shall not be built or commenced; and should any change be made in the plan of the bridge during the progress of the work thereon, such change shall be subject likewise to the approval of the Secretary of War.

Section 3. *And be it further enacted*, That Congress shall have power at any time to alter, amend, or repeal this act.

Approved March 3d, 1869.

Liability of City Passenger Railroads.

In the case of G. N. Wilkinson *vs.* the Baltimore City Passenger Railway Co., tried in the Superior Court, Baltimore, damages were awarded the plaintiff for injuries received in falling from the front platform of a car. The company appealed, and the Court of Appeals held that the Court's instruction to the jury was erroneous, for the reason that it ignored altogether the effect of the regulations of the company, &c. That a regulation of the company, prohibiting passengers from getting on or off at the front end of any car, and requiring them to enter and descend by the rear platform only, is a reasonable regulation, and knowingly to violate it, without the compulsion of some existing necessity, is conclusive evidence of negligence on the part of the passenger; so that, should he sustain an injury in consequence thereof, he will have no right of action against the company, notwithstanding the driver may also have been negligent. The circumstance that a driver or conductor may have given permission thus to use the front platform is immaterial; for the company cannot be bound by the act of their servant in attempting to dispense with a known and positive regulation. If an accident occur in consequence of violating a regulation of the company which prohibits the conveyance of baskets or parcels unaccompanied by a passenger, the person participating in such violation, and so sustaining injury, will be debarred from recovering therefor, if it be shown that he had knowledge of such regulation. The fact that a legible notice of such regulation was put up inside of all the cars, and the fact that the plaintiff had often previously ridden in the cars, are competent evidence that he had knowledge of its existence. Judgment was reversed, with leave to the plaintiff below to have a writ for a new trial.

Bridge over the Schuylkill.

The Commissioners for building a bridge over the Schuylkill, at South street, Philadelphia, have adopted a plan for an iron truss drawbridge, with piers of pneumatic piles or cylinders. The approaches are also to be of iron, and on the west side of the river space will be allowed for fifteen railroad tracks to pass under. The roadway for vehicles is to be 33 feet in the clear, and two passage ways for foot passengers, six feet each. The Chief Engineer is to furnish detailed plans and estimates when proposals for its construction will be issued.

Mississippi, Ouachita and Red River R. R. A meeting of the directors of this company was held at Camden, Ark., on the 29th ult., B. W. Martin, President, in the chair. They had under consideration a contract with Mr. J. E. Sickles for the construction and fully equipping, with all necessary rolling stocks, the railroad commencing at Eunice, running through Camden and terminating at or near Fulton on Red River. The contract was agreed to, signed, sealed and delivered. The following is a synopsis:

Mr. Sickles agrees to build the whole road by the 1st of September, 1872. To commence work at Eunice by the 1st of July, 1869, and to build twenty miles and equip the same by the 1st of November, 1869. To commence work at Camden by the 1st of October, 1869, and to build twenty miles and equip twenty miles westward by the 1st day of March, 1870. The company agrees to pay him for building and equipping the whole road $2,800,000. Sickles agrees to receive State bonds at seventy-five cents of their full value, and first mortgage bonds of the road at seventy cents, and capital stock in the company at 40 cents. On his failure to comply with his contract, the same is forfeited, unless his failure is caused by high water or other insuperable obstacles. The State bonds and the company's bonds are to be paid to him as the work progresses; an estimate of the work done, to be made every month.

☞ *Herapath* says there was a diminution of more than 10,000 tons in the exports of rails from Belgium last year as compared with 1867 the exports of 1868 having amounted to 70,550 tons, against 80,875 tons in 1867, and 32,510 tons in 1866. The decline occurred wholly in the diminished exports to Russia, which were 45,340 tons last year, against 67,095 tons in 1867, and 32,510 tons in 1866.

☞ The contract for building the Suncook Valley Railroad has been let to Gen'l Nat. Head. The road will be 17 miles in length, extending from the village of Suncook, to Pittsfield in Merrimack, Co., N. H. The road bed is to be ready for the iron by the 1st of December next.

☞ The Supreme Court at Des Moines, Iowa, has rendered a decision which declares unconstitutional the law passed last winter authorizing towns and cities to levy taxes for the aid of railroads.

☞ A meeting of the corporators named in the charter of the Cumberland and Ohio Railroad Company is to be held at Lebanon, Ky, on the 23d inst., for the purpose of organizing the same and adopting such other initiatory measures as may be deemed of importance to the enterprise.

☞ Among the bills passed at the recent session of the New Jersey Legislature were the following: to incorporate the Atlantic City Passenger Railroad Co.; to incorporate the Tuckerton and Atlantic Railroad Company; to incorporate the Camden and Philadelphia Bridge Company.

☞ The New Orleans and Vicksburg Railroad, which is to connect with the chain of river railroads from St. Louis, has received the sanction of the Governor of Louisiana and will be put under contract at once.

☞ The Louisville, Cincinnati and Lexington Branch Railroad has been completed. The distance between Covington and Louisville is 10¼ miles.

☞ Col. W. W. Merritt is now General Agent and Superintendent of the Rockford, Rock Island and St. Louis Railroad.

BOOTH'S DUPLEX, SAFETY, Steel and Iron Rails,

Now fully demonstrated to be the TRUE STEEL RAIL, we are now ready to negotiate with Railroad Companies for its adoption under such arrangements and suggestions as we will upon application by letter or in person make known to them. *Opening a new era in Railway economy hitherto unprecedented.* All communications must bear the signature of either the President, Vice President, Superintendent or Engineer.

TO CONTRACTORS.

Pittsburg and Connellsville Railroad.

PROPOSALS WILL BE RECEIVED up to Saturday, May 1st, inclusive, for the GRADUATION, MASONRY and BALLASTING of the remaining 47 sections of this road, situated at intervals upon the 90 miles between Connellsville and Cumberland.

Specifications will be ready for distribution at the Pittsburg and Cumberland offices on Friday, the 9th of April, and all information necessary to the proper examination of the work will be afforded by the engineers upon the line.

By order of the President and Directors.

BENJ. H. LATROBE, Chief Engineer.

OFFICE PITTSBURG AND CONNELLSVILLE R. R. Co.,
5t13 Pittsburg, March 18th, 1869.

LOCOMOTIVE WORKS, FOR SALE.

The PROPERTY situated at Jersey City, known as the JERSEY CITY LOCOMOTIVE WORKS,

Consisting of 24 full lots on Morgan, Steuben and Warren streets, with substantial buildings and machinery of the best description, ample for the manufacture of six to seven first-class locomotives per month. This property, from its vicinity to the city and to several of the leading railroads of the country is well worth the attention of those desirous of engaging in the manufacture of locomotives and other machinery. Apply to

United States Railroad Screw Spike Co.

No. 45 Cliff-Street,
NEW YORK.

We respectfully call attention to the DOUBLE HOOK HEADED SCREW SPIKE for fastening rails and chairs to ties. The above cut represents the size and shape of the Screw. It has been thoroughly tested on several of the most important railroads in the country, and in almost every case it has stood the test in the most admirable manner.

The SCREW SPIKE possesses the following advantages over the common spike:

First. They are made of the best refined Iron, the thread being forged (not cut), refines and toughens them.

Second. The holding-power of each Screw is from four to five tons, and the side pressure, three to four tons.

In three years' experience no Screw has moved from its place, and the rails in every case have been held as firmly to the ties as when first put down. By its use, therefore, the numerous accidents constantly occuring from loose and broken spikes, and loose and broken rails, and consequent spreading of the track will be obviated.

Third. In order to remove the rails it will only be necessary to reverse the SCREW one-quarter, and when replacing it, turn the SCREW back to its original position (the same as turning a button), when the rail will be held firmly, as before. *The ties* will thus be saved from the injury of splits, and the numerous holes made in them by repeatedly drawing out and replacing spikes. By the use of the SCREW, therefore, the durability of the ties will be greatly increased.

The saving to railway companies in ties alone, it is estimated (by experienced trackmasters) will more than pay the whole cost of the SCREW.

Fourth. Where the SCREW is in use, in addition to the saving of time in relaying rails, a much less number of men are required to watch the track, and keep it in repair, thereby causing a great saving.

In corroboration of the foregoing, we could present the testimony of many of the most experienced trackmasters and engineers in the country, but deem it only necessary to refer to the following railroad companies selected from more than forty who have used these SPIKES in more or less quantities, viz:

Philadelphia & Reading, Hudson River, Philadelphia, Wilmington & Baltimore, New York & New Haven, Chicago & Rock Island, Fond Du Lac & Sheboygan, Albany Bridge Company, Quincy Bridge Company.

We are now prepared to manufacture these SCREWS in any quantity desired.

RAILROAD IRON.

Railway Travel Made More Secure.

THE WHEELS HAVE STRAIGHT FLANGES 25 degrees double, two other wheels inside, elongated hubs to catch the rail in case the wheel jumps, the axle of steel enlarged in centre. The circle of the flanges on wheels cannot touch the rail—⅛ metal is shrunk on the rail by rollers doubling their strength. Smoke-stacks, increased draft, with jacket, sparks and cinders glided into the same by sieves, these are also for steamers, etc. Invented, applied, and for sale by

A. BEEBE,
78 Cedar street.

Steam Engine Power and Leverage.

BALANCE WHEELS AND MOVEABLE LEVERS. These work giving double power without centre action. Capstans and Steering Wheels, levers on the shaft or axle, about one part purchase and six parts lever, same on rudder heads for vessels and boats, etc. Invented, applied and for sale by A. BEEBE, 78 Cedar street, from 12 to 3.

PRATT'S
PATENT COMPENSATING FISH-JOINT,

MADE BY

VERREE & MITCHELL,
IRON AND STEEL MANUFACTURERS,
No. 939 North Delaware Avenue, Philadelphia, Penn.

COMBINES MORE ADVANTAGES THAN ANY FISH-JOINT HERETOFORE INTRODUCED.

This Joint is made of two heavy bars of wrought iron, or cast steel, sixteen inches in length, or any other desired length, fitted to the side of the rail and secured by four three-quarter inch bolts, with four malleable cast-iron cups and washers, and a gum ring two inches in diameter and half an inch thick, in each cup.

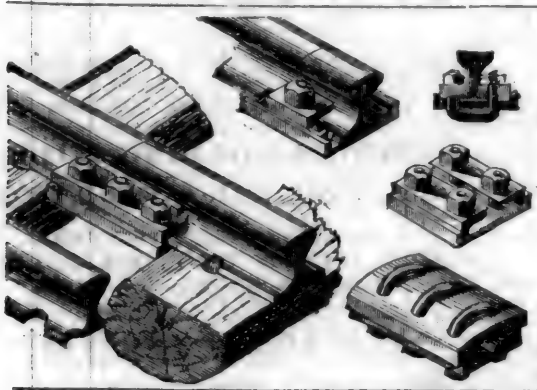
The value of gum to absorb jarring motion is well known; but when the pressure is as great as that required to secure the ends of railroad rails, some device, or method by which to prevent the gum from being forced out from under the washer, when subjected to increased pressure, is indispensable. The PATENT COMPENSATING FISH-JOINT secures that effect and enables Railroad Managers to apply all the force and pressure desired.

Where this Joint is securely fastened by screwing the nut upon the washer and gum in the cups with a lever three feet in length, it makes a perfectly tight joint, and thus secures what Railroad Managers have long desired—*a continuous rail*, with sufficient elasticity in the gum to relieve from and compensate for the sudden jar and at the same time allow for expansion and contraction by heat or cold.

We confidently claim for the PATENT COMPENSATING FISH-JOINT:

That it makes the best and cheapest form of fastening, requiring no plate or chair underneath the foot of the rail.

That it is safe and secure, and prevents the numerous accidents resulting from loose or broken rails.



That this Joint absorbs the vibratory shock given by the wheels in passing over the ends of rails, and thereby preventing fracture; and we have yet to hear of the first rail having been broken with our Joint on it.

That it can be applied in repairing and relaying with the least trouble and delay.

That the materials are indestructible, and make A PERFECT AND CONTINUOUS RAIL, thus securing what has long been desired, and what all previous experiments have failed to attain.

The Manufacturers can supply these Joints, complete in all their parts, ready to be fastened to the rails with dispatch.

Refer to all the Leading Railroads in the Country.

New York Saturday, May 1, 1869.

North Missouri Railroad.

REPORT OF THE DIRECTORS FOR THE YEAR ENDING FEBRUARY 28, 1869.

The directors congratulate the stockholders upon the present condition and prospects of the company.

During the past year the construction of the road has been pressed with all our energy, and notwithstanding many adverse and discouraging circumstances, we are able to report that the main line has been completed to the Iowa State line, and the West Branch to its connection with the Kansas City and Cameron Railroad, eight miles from Harlem, on the Missouri river opposite Kansas City; and an arrangment has been made with the Kansas City and Cameron Railroad for the common use of that eight miles of their road. Much yet remains to be done in the construction of houses and other conveniences for the economical use and management of the road, and in procuring additional rolling stock, to tax the energies of the company. But the great fact that the road has been completed, so that it can be successfully operated, is a substantial ground for mutual congratulations.

The public appreciation of our success is shown by sales made of our stock, which a year ago had no market value, and which now sells for ten or twelve dollars per share.

The length of the road is in round numbers as follows: The main line from St. Louis to the Iowa State line, 234 miles. The West Branch, from Moberly, (on the main line 145 miles from St. Louis) to Kansas City, 126 miles. Total length of road 360 miles.

The company also operates under a contract, heretofore reported to the stockholders, the Boone County and Jefferson City Railroad, from Centralia on the main line, (121 miles from St. Louis) to Columbia, 22 miles. The company has also leased a portion of the St. Louis and Cedar Rapids Railway, now being constructed, from our terminus at the Iowa State line to Ottumwa, where it will intersect two railroads crossing the State of Iowa. Twenty-three miles of this road are finished and we are operating it to Bloomfield. The remaining twenty miles will be finished very soon.

The company is also operating temporarily the small portion now finished of the St. Louis and St. Joseph Railroad, a road designed to run from Lexington to St. Joseph and which it is hoped will be nearly completed this year.

Total number of miles operated, 409.

During the year the company has extended its road in the city of St. Louis from its former terminus at North Market street to the St. Louis Elevator, about one and a quarter miles.

The company is now possessed of 45 locomotive engines, and cars of different classes as follows: 20 passenger coaches, 11 baggage, express and mail cars, 16 caboose cars, 410 box freight cars, 100 stock cars, 207 flat cars, 75 with coal sides, hog and stock racks, 15 gondola cars.

This equipment is obviously inadequate to the business to be done, and additions to it are being made as rapidly as they can conveniently be procured. The burning of our car shop last August caused much inconvenience and delay. We are now building cars to the extent of the capacity of our present shops.

The actual earnings during the year ending February 28th, 1869, excluding all estimates of earnings by the transportation of property and persons for purposes of construction, are as follows:

From passengers	$388,682 68
" freight	523,259 55
" mails	30,529 76
Total	$1,037,471 99

When it is considered how small was the equipment of rolling stock, and the necessity of using so much of it for the transportation of materials and other uses connected with the construction of the road, this exhibit of receipts from the portion of the road operated through the year is at least encouraging, and justifies our belief that the career of usefulness and prosperity so long hoped for has now begun.

The St. Charles bridge over the Missouri river is being constructed as rapidly as possible, and it is hoped that it will be completed within the current year. This bridge is being built by an independent bridge company, having a capital stock of one million dollars, of which this company holds three hundred and fifty thousand dollars.

The bridge at Kansas City is nearly completed. This company has no interest as proprietor in that bridge, but has by law a right to use it upon equitable terms. The use of these two bridges when completed will greatly facilitate the operations of the company.

The general liabilities of the company are as follows:

Capital stock—Main line and West Br.	$7,771,100
First mortgage	6,000,000
Second mortgage	4,000,000

The debt for the State loan is now held by private persons, and by an agreement that it shall not be enforced except upon a contingency not at all likely to occur, and consequently it is not reported as a liability of the company.

The receipts of earnings for the month of March, 1869, the first month of the fiscal year, were:

From passengers	$66,727 62
From freight	69,536 19
	$136,263 81

If the earnings for mail services be added to this sum, the whole will exceed one hundred and forty thousand dollars.

In behalf of the directors, very respectfully.

BARTON BATES, President.

St. Louis, April 5, 1869.

Boston and Maine Railroad.

The Newburyport *Herald* says there is reason to believe that the question of extending the Boston and Maine Railroad through that city is receiving such favorable consideration from the directors, as to give every reason to believe that it will be done before the coal season shall close this year. From the point where it will cross the Eastern Railroad, to its termination at the north end, will be three miles. The cost of laying out the new road for the track will be about $30,000, some portion of which will fall on the city.

Michigan Southern and Northern Indiana Railroad.

The earnings of this road for the years ending March 31, 1868 and 1869, were as follows:

	1868.	1869.
From freight	$2,725,249 80	$3,024,612 24
" passengers	1,689,107 09	1,723,856 37

Cash on hand March 1, 1869	372,859 03
Total as above	$2,206,710 66

Compared with the previous year the gross earnings of 1868-'69 show an increase of $276,889 20; with an increase in operating expenses of $111,691 11—making the increase in net earnings $165,198 09. The operating expenses are 59¼ per cent. of grors earnings; last year they were 60⅓. The report says:

The Board congratulates the Stockholders on the results of the year's operations, which show both the largest gross and largest net earnings of any year in the history of the road, as well as upon having reached the point so long looked forward to, when in all human probability regular dividends upon both classes of the stock are assured.

After paying running expenses, taxes, interest on all bonds, 10 per cent. dividend on guaranteed, 8 per cent. on common stock and the government tax thereon, the year's contribution of $162,000 to the sinking fund, there is a surplus of $50,835 88.

It is proper to say here, that at least $75,000 included in running expenses, might not improperly have been carried to improvements, embracing such items as ballasting, filling trestlework replaced with masonry, &c., &c.

The road has been operated with remarkable freedom from accident, while the efficiency has been fully maintained. The per centage of expenses to earnings has been slightly reduced. The cost per mile for fuel and locomotive repairs has been diminished while the value of the property has been not only fully maintained, but decidedly improved; the new rolling stock provided and paid for out of earnings having more than made good the depreciation.

It will be seen by reference to the report of the chief engineer, that liberal expenditures have been made in his department. Eighty-five miles of track have been relaid with new iron; one hundred and seven miles of track have new ties; one hundred and thirty-nine miles have been ballasted; fifty-nine miles of fences have been renewed.

The elevator A, burned at Toledo, in December, 1867, has been rebuilt. The other buildings have not only been fully maintained but materially improved, all of which, beyond the amount received for insurance, has been charged to current expenses.

In the matter of permanent improvement, a large outlay has been made for land in Chicago for the purpose of removing the main track from Clark street.

The principal part of the line between 16th and 22d streets has been secured, leaving little except a few valuable lots between 12th and 16th to complete the purchases. Shops for manufacture of car-wheels and the repair of railroad iron, have been erected at Elkhart.

At Laporte a building has been constructed to provide the necessary station accommodation as well as to furnish the company's offices and an eating house for the convenience of passengers. Improvements have been made at various points on the line. Many new station buildings, wood-shesd and water works have been erected. We have continued the renewal of our wooden culverts and trestle work with permanent masonry. Nearly six miles of additional side tracks have been laid to provide for the needs of the growing business.

In addition to the completion of the purchase in Chicago, and the change of line, it will be necessary, in order to meet the wants of the business, to erect at Chicago a freight house and an engine house, during the present year. Looking forward to a large increase in traffic, orders have been given for 10 locomotives and 200 freight cars, which are under contract to be delivered in the coming summer.

It is believed a still larger number will be needed, as during several months of the year just closed, the volume of traffic might have been materially increased if the road had had sufficient rolling stock.

The last of the claims under the guarantee by this company of the Cincinnati, Peru and Chicago Railroad bonds, was settled during the year.

A suit pending at the date of our last report for back dividend on the guaranteed stock has been recently determined by the court in our favor. Several other suits of long standing have been settled, and the company was never so free as now from embarrassing claims and vexatious litigation.

The commissioners of the sinking fund now hold 1,472 bonds of that class canceled and registered in their name. Of the sinking fund bonds stated in our last report, as on hand, 19 remain in possession of the company, unsold and unissued.

In conclusion the board would renewedly express their appreciation of the energy and good judgment displayed by the general superintendent and chief engineer, as well as the heads of the various departments, and of the interest shown by the employes generally to promote the success of the company.

The following is a comparative statement of the capital stock, funded debt, etc., year ending—

	Feb. 29, 1868.	Feb. 28, 1869.
Common stock	$10,059,400 00	$11,592,100 00
Guaranteed stock	586,800 00	533,500 00
Funded debt	9,038,640 00	8,876,580 00
February expenses paid in March	234,406 36	208,324 74
Unclaimed dividends & coupons	33,071 31	38,816 68
Total	$19,952,317 67	$21,249,321 42

The available assets at the close of the past and preceding years were as follows:

	Feb. 29, 1868.	Feb. 28, 1869.
Uncollected earnings	$187,279 91	$173,342 54
Freight overcharges due this company	13,827 03	17,114 02
Bills receivable—Chicago	9,210 00	7,000 00
Working supplies on hand	735,436 78	484,027 11
Toledo city bonds—for bridge	.....	3,000 00
Individuals accounts—for old materials sold, etc	.....	47,490 84
Judgment *vs.* F. E. Worcester	.....	6,385 03
Total	$945,253 72	$838,859 54

The apportionment of passenger and freight earnings of Main line and branches for the year 1868-'69, was as follows:

	Passenger.	Freight.
Through business	$756,185 61	$1,180,718 72
Main line, local	509,077 91	1,148,493 42
Air Line, local	158,544 98	298,115 08
Detroit, Monroe and Toledo	199,008 50	214,442 45
Adrian and Monroe	37.859 07	71,207 43
Jackson Branch	68,180 30	51,699 59
Storage	.....	59,940 55
	$1,723,856 37	$3,024,612 24

The number of passengers carried eastward,

was 440,848; do., westward, 481,703—total, 922,551, of which 140,967 were through, and 781,584 way. Of the through passengers, 95,785 were first class, 19,201 second class, and 25,981 third class, yielding $756,185 61. Of the way passengers, 749,404 were first class, 1,205 second class, and 975 third class, yielding $967,670 76. The number of miles traveled by through passengers, was 34,659,302; by way passengers, 30,506,596—total, 65,165,898, showing an increase in passengers carried of 70,363, and in the mileage of do., 4,773,275.

The number of tons of through freight moved eastward, was 220,133; do., westward, 122,226—total, 342,899, yielding $1,346,709 44. Way freight moved eastward, 303,695; do., westward, 200,489—total, 507,184, yielding $1,617,962 25. Total tons through and way eastward, 523,828, yielding $1,752,829 15; do., westward, 322,755, yielding $1,211,842 54—the total tonnage being 846,583, against 735,438 the previous year, and the revenue therefrom as above, (exclusive of storage,) $2,964,671 69. Mileage of freight eastward, 80,133,339; do., westward, 46,798,697—total, 126,932,036.

The company have 101 locomotives, 62 first class, 8 second class, 11 sleeping, 13 emigrant, 21 baggage, 1 paymaster's, 26 drovers', 27 caboose, 233 stock, 965 box, 321 platform, 8 wrecking and 1 tool cars.

Number of miles run by locomotives with passenger trains, 982,556; with freight trains, 1,466,670; with wood and gravel trains, 217,965—total miles run, 2,667,191. Average cost for repairs per mile, in cents, 8.76.

Chief Engineer.—CHARLES PAINE.

Pacific Railroad Bill.

The following is a copy of the joint resolution, which recently passed Congress, for the protection of the interests of the United States in the Union Pacific Railroad Company, and the Central Pacific Railroad Company, and for other purposes, approved and signed by the President on the 10th of April:

Be it Resolved, &c., That the stockholders of the Union Pacific Railroad Company, at a meeting to be held on the 22d day of April, 1869, in the city of Boston, with power to adjourn from day to day, shall elect a Board of Directors for the ensuing year, and said stockholders are hereby authorized to establish their general office at such place in the United States as they may elect at said meeting; provided, the passage of this resolution shall not confer any other right on said Union Pacific Railroad Company than to hold such election, or be held in any manner to relinquish or waive any rights of the United States, to take advantage of any act or neglect of said Union Pacific Railroad Company heretofore done or omitted, whereby the rights of the General Government have been or may be prejudiced; provided, that the common terminus of the Union Pacific Railroad and the Central Pacific Railroad shall be at or near Ogden, and the Union Pacific Railroad shall build, and the Central Pacific Railroad Company shall pay for and own, the railroad from the terminus aforesaid to Promontory Summit, at which point the rails shall meet and connect and form one continuous line.

SEC. 2. *And be it further Resolved*, That to ascertain the condition of the Union Pacific Railroad and the Central Pacific Railroad, the President of the United States is hereby authorized to appoint a Board of eminent citizens, not exceeding five in number, and who shall not be interested in either road, to examine and report on the condition of the same, and what sum or sums, if any, will be required to complete each of said roads to the point of terminus as first class roads for the entire length thereof to the said terminous in compliance with the several acts relating to said roads, and the expense of such board, including an allowance of ten dollars each for their services for each day employed in such examination or report to be paid equally by said companies.

SEC. 3. *And be it further Resolved*, That the President is hereby authorized and required to withhold from each of said companies an amount of subsidy bonds, authorized to be issued by the United States under said acts sufficient to secure a full completion as a first-class road, of all sections of such road upon which bonds have already been issued, or in lieu of such bonds he may receive as such security an equal amount of the first mortgage bonds of such company, and if it shall appear to the President that the amount of subsidy bonds to be issued to either of said companies is insufficient to insure the full completion of such road, he may make requisition upon such companies for a sufficient amount of bonds already issued, or in his discretion of their first mortgage bonds, to secure the full completion of the same, and in default of obtaining such security as in this section provided, the President may authorize and direct the Attorney General to institute such suits and proceedings on behalf and in the name of the United States and in any Court of the United States having jurisdiction, as shall be necessary or proper to compel the giving of such security, and thereby or in any manner otherwise to protect the interests of the United States in said road, and to insure the full completion thereof as a first class road as required by law.

SEC. 4. *Be it further Resolved*, That the Attorney General of the United States is hereby authorized and directed to investigate whether the charters of the Union and Central Pacific Railroad Companies and all their franchises have or have not been forfeited, and to institute the necessary and proper legal proceedings; also to investigate whether said companies have or have not made any illegal dividends upon their stock, and if so to institute the necessary proceedings to have the same reimbursed and also to investigate whether any directors or other agents and employees of the said companies have or have not violated any penal law, and, if so, to institute proper criminal proceedings against the persons who have violated such law.

Union Pacific Railroad.

The first meeting of the stockholders of this company, under the new law recently passed by Congress, was held in Boston on the 22d ult. —Hon. Oakes Ames in the chair.

Mr. R. G. Hazard, of Rhode Island, offered the following resolution, which was adopted:

Resolved, That in conformity with an act of Congress, approved April 10, 1869, the general office of this Company is hereby established in the city of Boston, and until some other place in said city shall be designated and provided by the Directors of said Company, or by some duly authorized committee, it shall be at Room No. 2, 114 State street, in said city of Boston.

Mr. Frederick Nickerson, of Boston, offered the following resolution, which was adopted:

Resolved, That the Special Committee of five, appointed by the Directors April 9, 1869, be a committee to remove from our general office in New York or elsewhere to our general office just established in Boston, all books and papers, and also any other things belonging to this company, which, in the opinion of said committee, should be so removed, and to dispose of our office furniture and fixtures in New York.

Mr. H. S. McComb, of Delaware, offered the following resolution, which was adopted:

Resolved, That the order of the Board of Directors in New York, on the 11th of March last, appointing S. Dillon, John Duff and H. Price a committee with certain powers to be exercised on or near the line of our road in relation to constructing and operating the same, is hereby approved and affirmed.

Mr. C. A. Lambard, of New York, offered following resolution which was adopted:

Resolved, That the action of the Board of tors appointing W. T. Glidden, Oakes Ames, James Brooks, C. S. Bushnell and Benj. E. Bates a committee to sell our first mortgage and land grant bonds to the shareholders in this Company, the contracts made for sale in the conformity thereto, is hereby approved and confirmed, and the said committee are hereby authorized and requested to receive payment for the same, and to apply the amount so received to the payment of the current expenses and debts of this Company.

Mr. B. E. Bates, of Boston, offered the following resolution, which was adopted:

Resolved, That the seal heretofore used by this Company be and the same is hereby cancelled and destroyed, and the President is hereby authorized and requested to procure a new seal with such device and inscription as he may direct.

☞ Congress has granted an extension of time to the 28th day of April, 1870, for the completion of the first section of twenty miles of the Little Rock and Fort Smith Railroad.

☞ Nashua, N. H., has voted, 719 to 546, to subscribe for $200,000 in the capital stock of the Nashua and Rochester Railroad, *provided*, that no assessment shall be made upon the same until seven thousand shares of said capital stock are subscribed by cities, towns, responsible individuals, and other corporations exclusive of railroad corporations. Also, $15,000 to assist in extending the Wilton Railroad to Peterboro'. This, with the $63,000 appropriated by Peterboro', leaves but $22,000 to be raised—$300,000 of the $400,000 necessary to complete the road having been previously provided for.

Baltimore and Ohio Railroad.

We have received a copy of the report of this company for the fiscal year ending September 30, 1866 which was presented at the annual meeting of the stockolders in Baltimore on the 9th of December last. The reports of this company have been delayed for several years past by reason of difficulty in settling accounts which had accumulated during the war and since. In view of the destruction of much valuable property, and many costly structures, during the war, which represented in part the capital of the company, it has been deemed proper to place all the expenditures for the maintainance and increase of machinery, and the construction of buildings, tracks, etc., for the years 1865 and 1866 as expenses. The following is a comparative statement of the earnings and expenses of the Main Stem for the years 1865 and 1866:

MAIN STEM.

Earnings:	1865.	1866.
Passengers	$3,997,642 28	$1,634,787 36
Tonnage	6,099,063 91	6,067,441 71
Total	$10,096,706 19	$7,702,229 07
Working expenses:		
Transportation exp.	$1,113,203 33	$1,151,761 72
General expenses	35,416 14	62,997 54
Losses by accidents	20,726 87	57,488 73
Repairs of railway	1,483,422 16	1,020,311 85
" locomotives	1,082,986 70	688,277 27
" burden cars	476,479 70	403,455 93
" pass. cars	287,250 86	79,533 93
" dump cars	5,727 87	4,277 29
" stationary machinery	147,765 19	145,976 43
" depots	332,725 63	276,611 70
" water stati'ns	30,074 09	38,656 19
" bridges	194,005 89	196,662 42
" telegraphs	42,317 83	8,041 79
Fuel and preparing	238,943 58	196,508 12
Cleaning engines and cars	63,153 16	77,046 17
Pumping water	11,674 36	11,695 26
Watching cuts, tunnels and bridges	59,173 35	54,431 10
Contingent expenses of machinery department	4,676 11	6,856 77
Total	$5,658,722 32	$4,480,190 21
Net earnings	$4,437,983 87	$3,222,038 86

It is shown that the earnings, in comparison with the fiscal year 1865 decreased $2,394,477 12 while the working expenses decreased $1,178,532 11—making thus a comparative decrease of net profits of the Main Stem of $1,215,945 01. Compared with the fiscal year 1864, the decrease of earnings being $875,463 18 and the increase of working expenses $1,209,681 16, the decrease of net profits amounted to $2,085,144 34.

The ratio of expenses to earnings was in 1864 $38.12, in 1865, $56.04 and in 1866, $58.16.

During the fiscal year, the sinking fund for the redemption of the city loan increased to $1,012,330 05—showing a gain of $55,605 41.

Dividends of 4 per cent. each upon the capital stock were paid on the 23d of October, 1865, and the 30th of April, 1866. The U. S. tax thereon was also paid by the company.

The liabilities of the company, compared with the statement of September 30, 1865, show reductions by payments on account of the loans stated as follows:

On loan redeemable in	1867	$67,330 53
" "	1875	31,000 00
" "	1880	22,500 00
" "	1885	34,000 00
		$154,830 53

The balance of cash in the Treasury, Sept. 30, 1866, was, $1,294,186 17, after deducting $133,873 96 for payment of interest on the city loan, and on the bonds of the company which matured Oct. 1, 1866.

Statement of profit and loss for the years ending September 30:

	1865.	1866.
Balance from previous year	$13,087,651 81	$16,084,928 97
Net earnings	4,437,983 87	3,222,038 86
Divid'd upon 10,168 shares of Washington Br. stock owned by the Co.	101,680 00	101,680 00
Increment of five million loan S. F.	44,848 48	61,621 58
House rents	3,777 79	8,238 93
	$17,675,941 45	$19,478,508 34
	1865	1866.
Dividends on stock	$1,050,000 00	$1,050,624 00
Interest and taxes	515,211 62	837,748 32
Ground rents	25,800 86	25,455 59
Abtament of claim against Central Ohio R. R.		16,548 60
Balance	16,084,928 97	17,548,131 83
	$17,675,941 45	$19,478,508 34

Total	$716,005 04	$636,658 35
Net earnings	$42,877 82	.....
Deficit	.....	$101,223 55

The aggregate earnings of the Main Stem, Washington Branch and Parkersburg Branch, for the years ending September 30, 1865 and 1866, were as follows:

	1865.	1866.
Main Stem	$10,096,706 19	$7,702,229 07
Washington Br.	916,286 67	460,760 96
Parkersburg Br.	758,882 86	535,434 80
Totals	$11,771,875 72	$8,698,424 83

The expenses of operating and repairs were as follows:

	1865.	1866.
Main Stem	$5,658,722 32	$4,480,190 21
Washington Branch	365,294 19	119,016 08
Parkersburg Br	716,005 04	636,658 35
Totals	$6,740,021 55	$5,235,864 64

And the revenue, after deducting the cost of operating and repairs, as follows:

	1865.	1866.
Main Stem	$4,437,983 87	$3,222,038 86
Washington Branch	550,992 48	341,744 88
Parkersburg Br	42,877 82	*101,223 55
Totals	$5,031,854 17	$3,462,560 19

* Deficit.

Showing an aggregate net decrease, compared with the preceding year of $1,569,293 98.

The following table gives the receipts of the last six years, those for 1861, 1862, 1863, 1864 and 1865, being inserted as a measure for comparison;

Main Stem—

	Passengers.	Tonnage.	Total.
1861	$889,159 05	$2,424,266 65	$3,211,425 70
1862	1,769,497 13	2,712,361 85	4,481,858 98
1863	2,332,806 37	4,177,138 69	6,509,945 06
1864	3,250,307 42	5,327,384 83	8,577,692 25
1865	3,997,642 28	6,099,063 91	10,096,706 19
1866	1,634,787 36	6,067,441 71	7,702,229 07
Washington Branch—			
1861	$327,897 03	$110,260 66	$438,139 69
1862	444,262 30	334,154 37	778,416 67
1863	500,117 08	203,006 51	703,123 59
1864	688,643 92	175,836 87	864,480 79
1865	747,582 06	168,704 61	916,286 67

Parkersburg Branch—			
1861	$134,386 14	$216,145 59	$350 531 73
1862	125,780 09	238,242 10	364,022 19
1863	147,874 97	298,345 89	446,220 86
1864	236,814 99	459,888 00	696,702 99
1865	322,314 81	436 568 05	758,882 86
1866	174,278 50	361,156 30	535,434 80
Aggregate—			
1861	$1,349,424 22	$2,650,672 90	$4,000,097 12
1862	2,339,539 52	3,284,758 32	5,624,297 84
1863	1,980,798 42	4,678,491 09	7,659,289 51
1864	4,175,766 33	5,963,109 70	10,138,876 03
1865	5,067,539 15	6,704,336 57	11,771,875 72
1866	2,182,164 12	6,516,260 71	8,698,424 83

The road operated by this company comprises three distinct parts: the Main Stem, the Washington Branch and the Parkersburg Branch. The length of these several lines is as follows:

Baltimore and Ohio Railroad	379.6 miles.
Washington Branch	30.0 "
Parkersburg Branch	103.5 "
Total	513.1 miles.

The stock of engines on hand at the close of the fiscal year 1866, numbered 290; of which 227 were first class, 31 second class, and 32 third class.

The number of cars owned by the company is as follows: 137 passenger, 19 smokers, baggage, mail, express, etc., 1 pay, 1 post office, 6 officers, and 3,846 tonnage, stock and coal cars.

The mileage of engines in 1865 and 1866 on the lines severally, was as follows:

	1865.	1866.
Main Stem	3,798,323	4,612,428
Washington Branch	584,848	525,832
N. W. Virginia R. R	436,729	425,776
Totals	4,819,900	5,564,036

No returns are given of the number of passengers carried. The through tonnage, which amounted in 1865 to 164,476, was in 1866, 145,650—showing a decrease of 18,826 tons.

The aggregate quantity of coal transported on the Main Stem in 1865, was 408,170 tons, and in 1866, 719,711—showing an increase of 311,541 tons.

The tonnage of live stock in 1865, was 26,304, and in 1866, 35,532; increase, 9,229.

The quantity of lumber brought to Baltimore in 1865, was 12,096 tons, and in 1866, 15,949 tons: increase 3,853 tons.

The quantity of flour brought to Baltimore in 1865, was 631,688 barrels, and in 1866, 640,718—an increase of 9,030 barrels.

☞ The Chesapeake and Ohio Railroad Company is pushing rapidly forward, and expects to reach the mouth of the Big Sandy River in a short time. The Tredegar Iron Works of Richmond, Virginia, have contracted to furnish 30,000 tons of iron rails for laying the track from Covington, West Virginia, to Catlettsburg, Kentucky.

New Orleans, Mobile & Chattanooga R. R.

The New Orleans *Crescent*, of April 7th, publishes the following interesting information regarding the progress and prospects of this great road which is soon to connect New Orleans by rail with Mobile:

There are now employed between the two cities about 3,500 men, felling timbers, clearing brush, removing stumps, getting out lumber for the bridges, towing it to the place for its use, digging, surveying, and ditching. Of the thirty one sections of the road all but six are already being worked. Men are engaged in grading and clearing the line embraced in sections three and four, extending from Lafayette avenue to the salt marsh beyond Michon's plantation. Upon sections five, six, seven, and eight, embracing the portion of the line from the above point to Pearl River and known as dredging sections, work has not yet begun. The machinery for the first dredge boat was shipped on Saturday last from New York, the boats themselves being in process of construction at Pearlington, on Pearl River, with a promise of completion, machinery and all, by the first proximo.

Between Pearl River and Mobile (including sections 9 to 31) the work is progressing actively under three main contractors. Piles are being driven for bridges at Pascagoula and Dog Rivers, it being the intention to transfer the pile drivers as soon as the work shall have been completed to Biloxi Bay and Bay St. Louis, respectively. The lumber for the bridges is already delivered on the banks, being brought from the Poitevent saw mills on Pearl River. Three hundred freight and eighty passenger cars and twenty-seven locomotives are built and awaiting transportation from West Troy, N. Y. The expectation is that by next New Year's day we shall be able to take a railroad ride to Mobile.

Little Rock and Fort Smith Railroad.

Col. W. P. Denckla, the energetic agent of the contractors, will return from the east in two or three weeks fully prepared for a vigorous prosecution of the work at several points where the road touches the river. This is, by far, the most promising enterprise which has been spoken of in connection with internal improvements west of the Mississippi river, and south of the great Pacific; as it opens up a most magnificent country to railroad connection with the rest of the world, and will form the main chain of communication with the 35th parallel Pacific route, soon to assume a practical beginning. It is well known that this road has the finest grant of lands ever made to any railroad, located years ago, and that our citizens are now daily adding to the public donation by thousands of acres, of the best selection, as private donations, and subscriptions of stock, over 50,000 acres having been subscribed in this city alone.—*Little Rock (Ark.) Gazette.*

Refrigerator Cars.

The Boston *Journal* mentions the arrival in that city from Detroit of a Refrigerator Car, laden with 17,000 lbs. of beef. The amount of ice consumed in this car during the passage from Detroit was about 2,500 pounds, whereas the amount used on such a trip heretofore has frequently reached eight or ten tons. The ice is placed in a narrow chamber at each side of the car, opening only at the top, and does not therefore come in contact with the articles placed within, or the air in the car, which is kept dry and cold. The meat was disposed of to Boston butchers, who confessed that it was in better condition than meat received directly from our home markets. The same principle is applied to rooms for the preservation of fruits, meats, &c., and has been successfully used for this purpose, strawberries and peaches having been kept in it from the ripening season until Christmas.

American Railroad Journal.

Saturday, May 1, 1869.

Stock Exchange and Money Market.

Money has been in decidedly more liberal supply, since our last. The banks have made a marked gain in their reserves of specie and legal tender notes; and have also added largely to their deposits. The Sub Treasury has cut down its balances but slightly. It holds an unusually light reserve of currency, about four millions all told, according to the prevailing street report. It will be a conditional seller of gold on each Thursday for some time, with a view to the augmentation of its lawful money hoard. It is unusually strong in its coin reserves, to which the current customs revenue is adding considerably as the season advances. The flow of currency is again very decided in this direction and is enlarging the available supply of loanable funds at this centre, particularly on call which tends to stimulate speculation in Government Securities, Gold, and Railway and Miscellaneous Share Property. Call loan rates have receded to 6@7 per cent. as the ruling figures, with exceptional advances noted to the prominent Government houses at 5 per cent. Strictly prime to good discounts range from 8@12 per cent. per annum, with a freer currency for the better grades, the offerings of which are not particularly heavy. On Tuesday there was an exceptionally active call for aid from the Stock Brokers, but it was promptly met, in the leading instances without any advance of rates. This animation was reflected by the City bank exchanges of Wednesday, which amounted to $135,414,223, with resulting balances of $2,992,876.

The specie reserve of the city banks is now $8,850,360, against $14,934,547 same time last year. The city bank deposits are now $177,340,080, against $180,307,489 week ending April 25, 1868 The legal tender reserve amounts to $53,677,898, against $53,866,757 same time last year. The circulation now stands at $34,060,581, against $24,227,624 same time last year. The loans are now $257,458,074, against $252,314,617 at this date last year. The Bank Exchanges at the Clearing House through the past week, averaged $125,484,300 a day, against a daily average of $128,727,550 the preceding week, and $135,009,409 the week ending with April 7, 1869. The current week's exchanges average about $113,000,000 a day. The city banks, last week, reported a gain of $1,038,581 of specie, $5,136,586 of deposits, and of $2,676,610 of legal tender notes. They increased their loans, $2,273,192; and reduced their circulation, $376 188.

National Bank notes to the amount of $157,490 were issued last week by the Treasury Department, making the total issue to 1,685 banks thus far, amount to $314,260,176, against $282,555,440 at the close of the fiscal year ending June 30, 1866. From the total issue is to be deducted the currency returned, including worn out notes, amounting to $14,498,051, leaving, with the existing 1,626 banks, (having an aggregate capital of $418,858,931,) an actual circulation at this date, of $299,762,125. The United States bonds held by Treasurer Spinner in trust for National Banks as security for circulating notes amount to $342,603,800; and for the public deposits, $30,455,350—making a total of $373,059,150. The Treasury Department last week redeemed and destroyed $607,000 of worn and mutilated fractional currency, and issued $571,800 of new. The outstanding amount of fractional currency on the 1st of April, 1869, was $36,719,912, against $36,781,548 on March 1, 1869, $35,511,127 on Feb. 1, and $34,215,716 on the 1st of January.

The U. S. Sub-Treasury receipts, week ending with April 24, were $8,344,663, including $2,671,828 from customs duties; payments, $9,661,064, including $1,863,906 of coin interest; balance at the close of the week, $88,655,876, against $89,972,277, at the close of the preceding week, showing a decrease of $1,316,401. The business of the Office during the first two business days of the current week, was as follows: On Monday, receipts, $1,254,639, including $386 576 from customs; payments, $2,767,515, including $351,487 of coin interest. On Tuesday, receipts, $780,733, including $379,621 from customs and payments $708,374, including $347,249 of coin interest. The balance at the close of business on Tuesday stood at $87,215,358, against $88,631,886 a week previous; and $89,857,966 on April 7, 1869. The aggregate receipts of the office in March were $40,051,331, including $13,241,405 from customs, aggregate payments, $40,897,476, including $8,698,881 of coin interest.

The outstanding amount of coin certificates on the 1st of April was $21,672,500 against $28,775,560, March 1; $32,659,520 on Feb. 1, and $27,036,020 on the 1st of Jan., 1869. The Sub-Treasurer at this port issued, last week, coin certificates to the amount of $446,000, and retired $2,540,828 through the receipts for customs. The coin certificates issued by the Sub-Treasury office, during March, reached $1,793,180.

Government revenues show a fair yield, in both forms of customs and excises. It is now estimated that the excises during the current fiscal year, will give about 170 millions to the National Treasury. The excises, last week, yielded about three millions; customs at the port of New York, $2,671,828 and at the outports about $850,000 (in coin) more, making the grand total income for the week equal to about $7,754,500 in currency. The total receipts of the National Treasury, from excises, during the fiscal year ending with June 30, 1868, were $191,180,564. The receipts from the same source, thus far in the current fiscal year, commencing with July 1, 1868, have been about 123 millions, according to the latest Washington advices.

Gold has been actively dealt in, most of the week, at generally strong, though variable prices, the range having been from 133⅛@134⅞, and the closing quotation on Wednesday 133¾. The imports of foreign specie have been on a less extensive scale; while the export movement has been comparatively light, though the sharp rally in the foreign exchange has tended to stimulate shipments. The customs revenue last week, at this port, was over $400,000 a day. Thus far, this week, it has not been quite up to this average. Government is announced as a seller of coin to the highest bidder through the form of sealed proposals, on each Thursday, until further orders. It will not market on any day more than a million dollars. It is now disbursing coin-interest on the May and July coin coupons, with the rebate stipulated for.

The Gold Exchange Bank clearances on Wednesday, were $93,166,000, and the resulting balances $3,013,245 in coin, and $4,774,544 in currency.

The average amounts of the Gold Exchange Bank loans and discounts last week was $1,190,583, average amount of specie $551,325, average amount of deposits $1,046,332.

The customs demand for Gold last week, averaged $445,305 a day; thus far, this week, it has averaged $383,098 a day, or equal to a weekly aggregate of $2,298,588. The arrivals of specie from Europe, Havana and other foreign ports, during the week were $406,291, and since Jan. 1, $7,593,976, against $2,633,101 same time in 1868. The receipts from California, last week, were none. The total customs revenue of the Government, in coin, at this port, from July 1, 1868, to date was $103,955,528, against $93,751,202 same time in the preceding fiscal year. At San Francisco, from Jan. 1, to Mar., 30th 1869, $1,543,675, against $1,728,595 same time last year.

The total receipts of California gold at this port, since July 1, 1868, have been $17,330,429, against $28,072,319 same time in fiscal year 1867–'68, showing a decrease in the current fiscal year, of $10,741,890. The exports of specie, from this port, last week, were $597,625, against $1,867,291 same week last year; total, since July 1, 1868, $32,122,565, against $47,945,476 in 1867–'68. Government disbursed last week through the U. S. Sub-Treasury here, on account of the coin interest on the public debt $1,863,906; since July 1, 1868, $69,910,626, against $54,618,162 same time in 1867–'68. The specie exports from San Francisco, from Jan. 1, to April 10, 1869, were $11,599,012, against $8,592,887 same time in 1868.

Foreign Exchange has been in less liberal supply and more demand at advanced figures. Bankers' prime sixty day bills on London closed on Wednesday at 108¾@109⅛, and on Paris to 5.23¾@5.17½; sight bills on London to 109⅜@109¾, and on Paris to 5.18⅛c.@5.15⅝. The offering of produce bills has been unusually liberal this week. The week's exports of domestic produce and miscellaneous goods from this port have been to the currency value of $4,471,695, against $4,170,473 same week last year; total, since July 1, 1868, $135,498,174, against $150,780,613 same time in preceding fiscal year of 1867–'68.

Government securities have been in more request and there has been a further general advance on the whole list. The offerings have been very light, as holders have been reluctant to realize on a rising market, feeling confident that higher prices would be attainable at an early day. The prospective reduction of the debt, to the extent of a few millions a month, during the summer months, is favorably affecting values.

U. S. sixes of 1881 closed here on Wednesday at 118¼@118½; U. S. Five-twenties of 1862, 121½@121⅝; U. S. Five twenties of 1864 at 117⅜@117½; U. S. Five-twenties of 1865 at 118⅞@118; U. S. Five-twenties of 1865, consolidated, 116@116⅛; U. S. Five-twenties of 1867, 115⅞@116; U. S. Five-twenties of 1868, 115¾@116; U. S. Ten-forties at 107⅞@107¾; U. S. Six per cent. currency bonds, 105¾@105⅞.

The latest quotations at the London Stock Exchange compare as follows with former returns:

* Ex May Coupon.

Railway and miscellaneous share property has been in very brisk demand and has advanced materially all through the list, closing irregularly.

General business has been quite, as a rule, and most kinds of domestic produce have favored buyers. Middling upland cotton closed heavily on Wednesday at 28½ cts. per lb. The stock of cotton now here is estimated at about 101,000 bales. The receipts at the port this week, have averaged about 1,000 bales a day. The receipts at all the ports, since Sept. 1, 1868, have been 2,021,000 bales, against 2,054,000 bales same time in 1867–'8; exports, same time 1,159,000 bales, against 1,472,000 bales same time in 1867–'8; stock on hand at latest dates, 335,500 bales, against 251,000 bales same date 1868. Total crops of 1867–'8, 2,430,893 bales; total receipts at ports year ending Sept. 1, 1868, 2,240,282 bales; total exports thence, same time, 1,657,015 bales. The exports of domestic cotton goods from this port, since Jan. 1, have been 8,686 pkgs., against 8,387 pkgs., same time last year. From Boston, 3,483 pkgs., against 4,425 pkgs. same time in 1868. At the Live Stock markets, this week, Beeves have been in less demand and heavy at from 10@17c., per lb.; week's receipts, 5,898. Milch cows dull at $40@$124 each, receipts, 93. Veal calves plenty and cheaper, at from 6@12c. per lb.; receipts, 2,243. Sheep and lambs in full supply less inquired for at from 4@8½c., per lb., as extremes; receipts, 20,185. Swine less active, and lower at from 10@10⅝c. per lb., all live weight; receipts, 20,546. Foreign merchandise has been quiet and less buoyant. The total imports of foreign dry goods, last week, were $1,505,843, and the total amount marketed $1,615,770. The value of foreign merchandise imported last week, was $4,379,387—making the grand total specie value of last week's imports of dry goods and merchandise, equal to $5,885,230, against $5,556,564 same week last year; total since July 1, 1868, $228,901,692, against $195,660,021 in 1867–'8. The freight market has been tame, closing very heavily. For Liverpool we quote flour at 1s. 3d. by sail, and 1s. 6d. by steamer, per bbl.; grain at 1d. by sail, and 1d.@2d. by steamer, per bushel; cotton at ⅛d. by sail, and $\frac{5}{32}$@$\frac{3}{16}$d. by steamer, per lb.; and heavy goods 10s.@25s. by sail, and 10s.@30s. by steamer, per ton. Total number of vessels in port on Wednesday, 635.

At the auction sale of Scranton Coal on Wednesday, the bidding was comparatively brisk and prices were firmer. Sales of 70,000 tons were made at from 4.55@5.25, as against 4.30@5.05 per ton of 2,240 lbs. last month, deliverable at Elizabethport, N. J.

The New York exports, exclusive of specie, for the week ending April 27, and since the beginning of the year, compare as follows:

	1868.	1869.
For the week	$4,170,473	$4,471,695
Prev. reported	54,319,432	48,289,313
Since January 1	$58,489,905	$52,761,008

The imports for the week ending April 24, and since the beginning of the year, have been as follows:

	1868.	1869.
Dry goods	$1,137,199	$1,505,843
Gen. merchandise	4,419,368	4,379,387
Total for the week	$5,556,564	$5,885,230
Previously reported	70,511,118	92,908,344
Since January 1	$76,067,682	$98,793,574

The balance in the Sub-Treasury on Wednesday was $88,445,013 62.

The following quotations of sales of Railway and other securities are in addition to those given elsewhere in our columns:—

New York.—Toledo, Wabash and Western consol. conv. bonds, 83¼; Milwaukee and St. Paul 1st mort., Iowa Division, 88½; Lake Shore Dividend bonds, 90; St. Louis and Iron Mt. 1st mort., 84; Dubuque and Sioux City, 115½; do., 1st mort., 90; Chicago and Milwaukee 1st mort., 89; New York and New Haven, 121; do., 6s, 94; Joliet and Chicago R. ☞ $1,000,000 GOLD.—FIRST MORTGAGE BONDS of the St. Louis and St. Joseph Railroad of Missouri.—Both Principal and 6 per cent Interest Gold. Payable May and November 1st, at the Farmers' Loan and Trust Co., in the City of New York, who are the Trustees for the Bonds. Length of road, 72¼ miles. Total amount of Bonds is $1,000,000, which is less than $14,000 per mile, and secured by a first mortgage on the whole road and entire property of the Company.

The interest on these Bonds is the same as on United States 5-20s, 1862, also due at same time; and, according to present prices, $1,000 5-20s will sell for $300 over our price for $1,000 St. L. & St. J. R. R., while the latter is equally as good security in every respect.

Present price 87½ and accrued interest in currency. For pamphlets and further particulars, apply to TURNER BROTHERS, Bankers, No. 14 Nassau-St., New York.

☞ Sealed proposals will be received by C. W. Wentz, Esq., Chief Engineer of the Albany and Susquehanna Railroad, at Albany, N. Y., until the 11th inst., for the construction of a Union Passenger House, in the city of Binghamton, for the Erie, the Albany and Susquehanna, and the Syracuse, Binghamton and New York Railroad Companies. Plans and specifications will be ready for examination on and after the 3d inst.

☞ Sub contractors will find good work and a long job at fair prices, on the Monticello and Port Jarvis Railroad, 88 miles from Jersey City by the Erie Railway. Apply to F. C. Crowley, at Contractor's Office Port Jarvis, New York.

☞ The preliminary survey of the proposed Sugar River Railroad, from Bradford to Claremont, N. H., has been commenced.

Iron Manufacture in Missouri.

The 10th of April, 1868, is referred to by Mr. S. Waterhouse, of St. Louis, as the day on which the experiment of making iron with mineral coal was successfully tried at Carondelet, Missouri. The furnace then started continues in active operation, and has produced in all more than three thousand tons of iron. Mr. W. says: "An old iron maker from Pittsburgh, observing the superiority of this metal, hesitated to believe that it was made with raw coal. The proprietors of the Phœnixville and Danville Iron Works in Pennsylvania have testified to the excellence of this iron. Its fusibility, ductility, and strength, render it especially suitable for common and malleable castings. The iron is red short. At first the yield of furnace was from sixty to seventy tons of iron per week; now the mean product is 126 tons a week."

A New Compound Rail

Has been invented and patented by Mr. J. H. Moore, of Chicago. The rail is made in three parts, a cap rail of steel and two side pieces of iron. The cap rail is clasped by the upper extremities of the side rails, which are held together by iron ties—bolts bent down at each end and without heads or screws. The form of these rails is such that all downward pressure on the cap rail causes its tongue to be the more firmly clasped by the side rails, which hold it as in a vice. The whole length of the cap rail is so clasped, and if it were broke vertically into sections two inches long, the track would remain unbroken. Three separate bars of iron must break at the same time in order to so injure the track as to throw off cars.

☞ Ground has been broken for the Extension of the Utica, Chenango and Susquehanna Valley Railroad. The Sherburne *News* says that fifteen days will probably find the grading done to the river. On the Richfield Springs Branch the grading, with the single exception of the deep cut at Cassville, has been so far done that the track layers will meet with no delay. It is expected that the cars will be running to Richfield Springs by the 1st of August.

☞ The Frederick, Md., *Republican* says: "It is with pleasure that we record the evident progress which is being made toward the construction of the Frederick and Pennsylvania Line Railroad. The President and Directors this week give public notice that proposals will be received from this until the 22d day of May for the construction and grading of certain sections of said road.

☞ The earnings of the Great Western Railway of Canada for the month of February, 1869 were $260,136 92; and the working expenses, including renewals, $180,025 68—making the net earnings $80,111 24. In February, 1868, the earnings were $251,557 59, the expenses $175,333 67, and the net earnings, $76,223 92—showing an increase in earnings of $8,579 33, in expenses of $4,692 01, and in net earnings of $3,887 32.

☞ The directors of the St. Joseph and Denver Railroad Company have decided that the road should connect with the Kansas Pacific Railroad at the 100th meridian. The work will be pushed forward rapidly.

Journal of Railroad Law.

COMMON CARRIERS—WHEN INSURERS ARE LIABLE FOR HIDDEN DEFECTS IN PACKING—WHAT IS THE "ACT OF GOD."

The following are the facts in the late case of Klauber *vs.* The American Express Company (21 Wis., 21.) The action was brought to recover for injuries done to goods of plaintiff while in possession of defendant as carrier. The goods are described as "a package containing three dozen ten spring skirts, three dozen sixteen spring skirts, and three dozen twenty spring skirts," and it is alleged that through defendant's negligence they were "water soaked, rusted, and utterly spoiled." Answer] denying negligence on defendant's part, and alleging that the damage arose from the improper manner in which said skirts were packed for transportation.

On the trial (by the Court alone,) it was stipulated that the package in question was wrapped in paper, and covered with sacking; that when delivered to plaintiff it was wet from exposure to rain while being transferred from the cars at Madison to the express wagon, and from the wagon to the defendant's office, all of which was done during a storm of rain. Plaintiff introduced evidence tending to show that "such goods in any kind of package are perishable in rainstorms, if exposed," and "should not be handled in a storm of rain at all, no matter how packed;" that small packages of such goods (worth from one to two hundred dollars,) are often wrapped in paper and enclosed in sacking, and this is sufficient if they are properly handled. The defendant's evidence tended to show the facts by the Court, which (besides those stipulated) were as follows: 1. That there was nothing about the package to indicate what the contents were, and defendant had no notice what they were. 2. That the goods were exceedingly liable to injury from dampness, and were packed in such a manner as to be injured by slight exposure to it. 3. That the usual and proper mode of packing such goods in such quantity for transportation, by express from New York to Madison, is in wooden boxes or cases. 4. That said package arrived at Madison on the express train during a violent storm of rain; and it was necessarily, and according to the usual course of business, immediately removed from the cars to the defendant's express wagon, and thence to its office. 5. That in this transfer defendant's servants used such caution and care as would have secured the goods from harm had they been put up properly, or as such goods are usually packed. On these facts the Court rendered judgment against the plaintiffs. They excepted to the second, third and fifth findings, and the latter clause of the fourth; and appealed from the judgment. The opinion of the Court was delivered by

DIXON, C. J.—What is meant when it is said hat if goods are improperly packed, the carrier will not be liable for injuries resulting from that cause? Is it meant that if the goods are of a nature to be injured by rain, they must be secured by water-proof covering or cases? It was argued in this case, that because the goods were of that nature, and the shipper did not pack them in wooden boxes or other water-proof covering, so as to guard against the ordidary contingency of rain when they were transferred from cars to wagons, and from wagons to cars or warehouses, in the course of transit, the company is not responsible for the loss, provided that proper diligence was used in transferring them, so that they received as little injury as possible under the circumstances the company not having previously provided awnings or other suitable means of protection, so as effectually to have avoided the injury. We believe there is no authority for this position, and that the improper packing which will excuse the carrier, signifies some internal or latent defect, of which the carrier does not know, and from which loss or damage ensures to the goods in the ordinary course of handling and transportation. A common carrier is an insurer against all damage to or loss of goods entrusted to him for transportation, except such as may arise from the act of God, the act of the enemies of the country, or the act of the owner himself. If there be some hidden defect in the packing and the damage result from that cause, it is the act of the owner, and the carrier is not responsible. But as to the external protection of the goods, the owner is not required to cover them so as to be safe against the action of rain, or wind, or fire not happening by the act of God. Those are dangers the hazards of which are by law imposed upon the carrier, and they are such that they may, in general, and especially the first, be easily resisted. In this case, the company might, with proper care and forethought, very readily have prevented the injury from the rain, while removing the goods from the car to the wagon, and from the wagon to the warehouse. In speaking of rains and winds, we mean of course the ordinary and frequent occurrences in this country not amounting to tempests. Tempests are regarded as the acts of God; and for losses caused by them the carrier is not liable. Losses "by act of God," for which the carrier is excused, have been well defined to be "those losses that are occasioned exclusively by the *violence of nature;* by that kind of force of the elements, which human ability could not have foreseen or prevented, such as lightning, tornadoes, sudden squalls of wind." Against all ordinary occurrence of rain, then, the carrier is bound to provide, and if he does not, and damage ensues to the goods, he must bear the loss, even though the goods might have been so packed or inclosed by the owner as to have prevented the injury. If goods thus liable to injury were to be always so packed as not to be injured in that manner it would, no doubt, greatly diminish the burthen and responsibility thrown upon the carrier. But the owner is not required so to pack them, and if he does not, the omission is known to the carrier, who is supposed to compensate himself for the additional trouble and risk by additional charges for his services. The object of packing is, in general, to secure convenience, safety and dispatch in handling and transportation, and not to prevent injury from such accidental causes as rain happening in the course of transit, against which the carrier is presumed to have provided. The owner may, therefore, if he choose, deliver the goods without any external protection; and if he does, and they are of a nature to be injured by the mere handling and carriage in a careful and proper manner, and are so injured, the loss will be his own; but if they are otherwise injured, by rain or other cause for which the carrier is not excused the loss will fall upon the carrier.

The case was likewise presented as if it was a question of the degree of diligence exercised by the company and its servants at the time, to prevent the injury. The loss not having been shown to have arisen from one of the excepted causes, it is no matter what degree of care or prudence may have been bestowed at the time, the company is nevertheless responsible for it.

The principles in this opinion are so familiar and well settled that, aside from the authorities found in the brief of counsel, we deem it unnecessary to refer to others, except that we note Forward *vs.* Pittard, 1 Term, 27; Friend *vs.* Woods, 6 Gratt., 189; and Parsons on contracts (5th ed.) Vol. 2, Note (M.,) as bearing particularly on the questions considered.

By the Court.—The judgment of the Circuit Court is reversed, and a new trial awarded.

South-Western Railroad Company.

PRESIDENT'S REPORT.

GENTLEMEN: I have the satisfaction to be able to report, that since the last meeting, which inaugurated the revival of the construction of the road, the work has steadily progressed, and that we may now look with confidence, towards the immediate completion of fifteen miles, and the subsequent construction of thirty miles now under contract, the ultimate completion of the road to its present terminus at the State Line, and also to its probable extension to Danville, Ky., or some other point connecting with one or more completed or projected roads; so that the final completion of this, another trunk line, connecting the Ohio River with the Southern States, may now be considered only a question of time.

I hereby report for your information, the following action taken by the Board of Directors, who were elected at your last meeting to take charge of your interests; and it may also be consistent with my duties, to recapitulate here, some of the action of your last meeting.

The following resolution was passed by the old Board of Directors, and subsequently unanimously approved and adopted by your meeting, to wit:

"*Resolved*, That the Board of Directors of the South-Western Railroad Company do hereby accept the additional aid granted the road by the General Assembly of the State of Tennessee, and do accept the amendments to the charter made by said Act."

At the first meeting of the new Board of Directors elected to serve during the past fiscal year, the following officers were elected: Samuel Parker, President; M. C. Dibrell, Treasurer; I. C. Stone, Secretary. At the same meeting, Maj. E. F. Falconnett was appointed Chief Engineer; and subsequently, Judge E. L. Gardenhire and Col. J. H. Hughes, were appointed Attorney and General Agent of the company, respectively.

Since that time, the Board of Directors have met, from time to time, to transact the business of the company. The following members of the Board were elected an Executive Committee: Col. P. H. Marbury, Col. Charles H. Irvin, Dr. J. B. Armstrong, Hon. L. L. Faulkner; and the following as an Auditing Committee: Geo. M. Smartt, Esq., Captain A. D. Collins and Hon. Wm. Bosson.

The old By-laws of the company were adopted, and additional By-laws were enacted, creating an

Executive Committee, and giving it full power to act, subject to the approval of the Board, and forbidding the payment of unaudited accounts.

On the 8th of May last, the Chief Engineer was directed to locate and prepare for letting the first thirty miles of the road, and to advertise for proposals for the local work, and the bridges over Collins River and Caney Fork.

At the same meeting, the additional subscription to the capital stock of the company of $120,000 by Overton County, and $40,000 by White County, by a vote of the people, was officially announced.

Subsequently, certain suits pending in the Courts against the company for work done under a former administration, were compromised by a special committee, appointed for the purpose; and after the approval of the action of such committee, by your Board of Directors, certain sums were ordered to be paid, and were paid accordingly by the Treasurer of the Company, and the suits have been withdrawn.

At a meeting of the Board of Directors, held upon the 18th of August last, I reported having drawn from the State authorities $300,000 in the bonds of the State of Tennessee. The bond of the Treasurer for $50,000, was also presented and approved.

At the same meeting a report of the Chief Engineer was received, giving a comparison of the work to be done in accordance with the proposals received and opened by the Executive Committee, and a list of the most favorable proposals was submitted by him. After lengthy discussion, the motion to let the first thirty miles of the road, including the masonry of the bridges across Collins River and Caney Fork, to Mr. D. E. Davenport, was carried by a large majority; and the contract was subsequently signed on the 18th day of August last.

This contract carefully drawn up by the Chief Engineer, contains all the necessary specifications, is a lengthy one, and was submitted to the Executive Committee. It provides for prices for the detail of the work. Twenty-five hundred dollars per mile in the bonds of the County of White, are to be paid per mile, for local work in White County, the balance is to be paid in cash. Payments are to be made monthly, in accordance with the estimates of the Engineer of the company, and twenty per cent. of the value of the work done, is retained as collateral security until the completion of the work.

The contract also provides that the company shall have the right to suspend the work on any portion of the first thirty miles by giving sixty days notice, and a final estimate on suspended work. It also provides for final estimates, and full payments upon the completion of the first fifteeen miles, and for the completion of all the work on the first thirty miles, unless suspended by an order of the Board, by the 1st day of September, 1869.

At a meeting of the Executive Committee on the 29th day of August, a report upon the construction and letting of the bridge superstructure, and iron piers of Collins River and Caney Fork bridges, was submitted by the Chief Engineer; and the superstructure of Collins River bridge, was ordered to be let to Asa Faulkner, Esq.; and the superstructure of Caney Fork bridge, was let to the Louisville Bridge and Iron Company, Albert Fink, President; and the contracts for that purpose, submitted by the Chief Engineer, were duly signed.

Subsequently, by authority of the Executive Committee, a contract was signed with T. M. Brennan & Bro., Nashville, Tenn., for the construction and erection of two iron piers at Caney Fork bridge, in accordance with the original designs and specifications of the Chief Engineer of the company.

The following Directors were elected by the Board during the last year, to fill the vacancies occasioned by death, resignation, or otherwise, of members of the Board: Col. J. H. Hughes, in the place of Geo. A. Anderson; B. M. Stevens, Esq., in place of E. W. Bronson, resigned; Gen. G. G. Dibrell, in place of J. R. Grace, deceased.

I regret to state that the calls made upon the stockholders for installments of the private stock subscribed, have, up to this time, remained unnoticed; and I hope that the stockholders will pay up the calls made upon them promptly, as the extension of the work depends entirely upon the prompt furnishing of the necessary means.

At the meeting of the committee on the 23d day of December, the Engineer was ordered to advertise for proposals for the delivery of cross ties for the first fifteen miles of the road, and subsequently the committee ordered the cross ties for the first three miles to be let to D. E. Davenport, in accordance with his proposal. At the same meeting, the President and Chief Engineer were ordered to correspond, and to invite proposals for the delivery of iron rails and fastenings for the first fifteen miles of the road.

I am happy to state that an Act passed by the Legislative Assembly of Tennessee at their last session, gives this company the privilege to draw the State aid of $10,000 in State bonds per mile, upon the completion of the grading to Collins River; and appropriates another issue of bonds to the same amount upon completion of the grading to the Caney Fork River, thus amending the Acts and charter granted by the Legislature, and accepted by the company. This great advantage will enable us to lay track upon the first three miles of the road by the 1st day of June next. And if the contractor should complete the work by the 1st day of September, as he has contracted to do, trains will be running to Coney Fork River by the 1st day of January, 1870.

I refer with pleasure to the efficiency of the contractor in regard to the prosecution of the work, and express the hope that, by the next annual meeting of the company, trains will be running across Caney Fork River into White County. But, although much has been done, much more remains to be done; and I may say, that the great work before us has only been fairly started. It will require the strongest efforts and persever ance of the whole people along the western base of Cumberland Mountain, to build the road; and for this purpose, I propose to undertake a thorough canvass of the Counties of Warren, Van Buren, Putnam and Fentress.

It is to be hoped, that, aside from the county subscriptions, private stock, payable in cash, work, materials, land, or farm productions, can be obtained; and that the balance necessary to grade the road to the State line, will be subscribed in the course of this year, as the immense, unparalleled State aid granted, and the amount of work actually done, must prompt the people to action in the matter.

The following is a statement of the approximate amount of means of the company, applicable to the grading of the road:

White County, old subscription	$32,000
" " new subscription	40,000
Overton County, old subscription	40,000
" " new subscription	120,000
Private stock	60,000
State aid, applicable to grading—State bonds	300,000
Total means—cash	$292,000
State bonds	300,000
	$592,000

By comparing this amount with the estimates of the Chief Engineer for the local work of the first thirty miles, we find that the company is provided with means to build the same which can be ironed with the State aid appropriated for that special purpose. The State aid applicable to bridges on the road, will also be sufficient to build the same.

Considering the large amount of aid liberally granted to this company by the Legislative Assembly, from time to time, which amounts to

Special aid—State bonds	$300,000
Bridge aid— "	200,000
Aid for iron superstructure, $10,000 per mile, 84-5 miles	845,000
Total	$1,345,000

it appears to me that the people ought not to delay any longer in coming forward and aiding us in this enterprise in a substantial manner.

In conclusion, allow me to call your attention towards early action, with a view of extending this road, by charter of Kentucky, to Danville, Ky., or to Elizabethtown, Ky., or else towards a junction with the Knoxville and Cincinnati Railroad, near its crossing over Cumberland River, Burnside Point.

Your attention is also called to the Southern connections of this road, and to the probable construction of a road from Huntsville, Ala., to a point on the Winchester and Alabama Railroad; and a road from Decatur, Ala., to Aberdeen, Miss. A more direct connection of our road with the Winchester and Alabama Railroad at Decherd, or else a direct connection by rail, between Tullahoma, Tenn., and Decatur, Ala., may at some future time, become a matter of necessity, as a glance at the map will show, that a line from New Orleans or Mobile, *via* Meridian or Aberdeen, Miss., Decatur or Huntsville, Ala., Decherd or Tullahoma and McMinnville, Tenn., and Danville, Ky., to Cincinnati, Ohio, is by far the straightest and most practicable line to connect these extreme points.

By the completion of our link in this long chain, we may secure to our road an amount af traffic, which, with the gradual development of our country, and the increase of local business, will, in course of time, become very considerable.

Respectfully submitted,

SAMUEL PARKER, President.

McMinnville, Tenn., March 5, 1869.

☞ The Providence and Worcester Railroad Company has completed its double track beyond Blackstone, and is rapidly pushing it northward.

Grand Trunk Railway of Canada.

REPORT OF THE DIRECTORS FOR THE HALF-YEAR ENDING DECEMBER 31, 1868.

The gross receipts upon the whole undertaking, including the Buffalo and Champlain lines, have been 756,163*l.*; deduct the working expenses, exclusive of renewals (being at the rate of 59-44 per cent., against 68 50 of the corresponding half of last year), 449,487*l.*; the renewals and improvements of the permanent way and works in the half year debited to revenue, 126,772*l.*; total, 576.259*l.*; leaving an available net balance of 179,904*l.*; deduct loss on American currency, 43,318*l.*, and this reduces the balance to 136,-586*l.*; to this sum has to be added the balance carried from the net revenue account of last half-year of 8,835*l.*, making a total balance of 145,-421*l.*; from this, however, has to be deducted the amount of postal and military revenue due for the half-year to the postal bondholders of 16,-171*l.*; leaving the balance of 129,250*l.* applicable for the following payments, namely—Interest, &c., paid on lands, 1,873*l.*; do. on mortgage to Bank of Upper Canada, 4,423*l.*; ditto on loans, bankers' balances, promissory notes, European exchanges, &c., 4,784*l.*; ditto on British American Land Company's debentures, 616*l.*; do. on Montreal Seminary debentures, 616*l.*; ditto on Island Pond debentures, 2,700*l.*; half-yearly installment on Portland sinking fund, 2,347*l.*; Atlantic and St. Lawrence lease (in full), 32,800*l.*; Detroit line lease (in full), 11,250*l.*; Montreal and Champlain Railway Co., 9,914*l.*; Buffalo and Lake Huron, 19.267*l.*; equipment bond interest, 10,779*l.*; balance, 27,877*l.*;—total, 129,250*l.* Comparing the results of the half-year's working with the corresponding period of 1867, there is an increase in the gross revenue of 51,784*l.*, equal to 7.35 per cent., with an increase in the working expense, inclusive of renewals and improvements, of only 2.181*l.* on the increased traffic carried. Indeed, but for the fact that there has been charged in the half-year 5,400*l.* for insurance on the company's property, the working expenses would have been less than in the same period of 1867, notwithstanding the increase of traffic of nearly 52,000*l.* This amount for insurance represents the half-year's premium on a policy which came into force last July for $4,300,-000, not only for the company's buildings, but also for the wooden bridges on the railway, the stocks of cordwood and lumber at the different stations, and also freight in the warehouses and in transit. The late serious losses by fires at Toronto and Sarnia led to this insurance being effected, and although the full value of the company's property in buildings, &c., is of course not embraced in this policy, still it is believed to be sufficient to meet all ordinary risks. The renewals in the half-year amounted to 126,772*l.*, against 85,819*l.* for the corresponding period of 1867. In this sum is included a charge of 22,747*l.* for improvements in the renewal of the permanent way and works, an item which in 1867 amounted 17,351*l.*, and which was then charged to capital. The weight of the rails has been increased from 62lbs. to 75lbs. per yard. The number of miles of railway relaid with new iron in the half-year was 88½, and the number of new ties put in was 491,993. The large outlay that has been made for renewals has, of course, resulted in a very much improved condition of the line, as is shown by the reduction in the cost of the maintenance of the road, amounting in the half-year to 6,880*l.* The directors regret that the rails sent out from this country in 1867, purchased from the best makers, are not, according to the reports of the company's engineers, giving satisfaction. The directors took every precaution to secure the best rails which could be made and exacted guarantees from the makers which they are putting in force. It is satisfactory to find that the small quantity of steel rails sent out in 1865, although placed on a part of the line where the traffic is very heavy, show no signs of giving way, and that it has not been found necessary to replace any of them. The average receipt per passenger was 6*s.* 9½*d.*, against 6*s.* 9½*d.*, in 1867, and the average receipt per ton of freight was 16*s.* 8¾*d.*, against 15*s.* 10¼*d.* in the corresponding period last year. The loss on American currency still remains a serious item in the half-yearly accounts. It amounts for the last six months to 43,818*l.*, against 39,384*l.* in the corresponding half of 1867. Gold fluctuated during the half-year from 149¼ on the 6th August to 132¼ on the 6th November. Since then its premium value has still further declined, and it may be hoped that the loss from this cause during the current half year will be further lessened. The indirect loss from increased prices of labour and materials, on the most careful estimate which can be made, was in the half-year not less than 60,000*l.*, and the directors believe that they are justified in saying that but for the loss, direct and indirect, through the depreciated currency and high prices resulting from the war in the States, the company would have been in a position to pay cash dividends on the first and second preference bonds and stocks at least, and probably on the third preference stock also, since 1863. A table showing the gross and net earnings from 1861 to December of last year in mixed currency and gold, and also the expenditure in renewals and the direct loss sustained by the company by the depreciation of the American currency, show that the total expenditure on renewals has been 828.152*l.* and the loss on American currency, 413,-521*l.* In the face of this outlay and loss the total profit has increased from 142,492*l.* in 1861 to 297,894*l.* in 1868. In their last report the directors called attention to the fact that certain bonds, issued by the city of Portland in aid of the construction of the Atlantic and St. Lawrance Railroad, amounting in the aggregate to $1,500,000 and covered by a first mortgage on the undertaking, would begin to fall due in December last, and that the whole amount would mature between that period and January, 1871, and that the sinking funds created for the redemption of these bonds would not provide for the payment of more than half the amount. The Grand Trunk Company, under the terms of the lease of the Atlantic and St. Lawrence line, is bound to provide for the payment of these bonds at maturity, either by means of the sinking funds or otherwise. The board, having no available funds with which to meet the half of the bonds not covered by the sinking funds, had to approach the authorities of the city of Portland with a view of obtaining an extension of time, and the directors are happy to be able to state that an agreement has been concluded with the city of Portland, under which the city undertakes to issue new bonds for the balance of the original issue, which will not be taken up by the moneys accumulated and to accumulate in the sinking funds before 1871. The directors have in previous reports referred to the position of the second mortgage bonds of the Atlantic and St. Lawrence Company, which matured in April, 1866. New sterling bonds were created, some of which were sold, and the proceeds applied to taking up the old bonds, others were accepted by holders of the original bonds, and the time of payment of a portion was extended, with the consent of the holders, by the issue and acceptance of additional sheets of coupons, embracing a period of five years, dating from April, 1866. There still remains, however, a balance of over $200,000, the holders of which have refused either to extend the time of payment or exchange their bonds for new ones. After the transaction of the ordinary business at the ensuing half-yearly meeting, it will be made special for the purpose of considering a proposed new agreement with the Buffalo and Lake Huron Company. The object of that agreement is two-fold—first, to settle past differences, and secondly, to effect more satisfactory arrangements for the future, and in perpetuity instead of for the original term of twenty-one years. The heads of the new agreement will be laid before the meeting, and, as regards the past, will explain themselves. As regards the future, the main feature of the new arrangement may shortly be stated to be the substitution of a fixed half-yearly sum, instead of (as at present) a fluctuating amount in the form of a proportionate part of the net receipts of the two undertakings—the management of both being hereafter left with the Grand Trunk, without any right of interference on the part of the Buffalo Company. The directors, whilst not desiring to represent this proposed new arrangement as essential, have come, after much deliberation, to the conclusion that it is desirable, on the whole, for the Grand Trunk Company. The accounts for the half-year are made up, as regards the Buffalo and Lake Huron Company, on the footing of the new agreement with them, and of course upon the assumption that that agreement will be carried into effect. Certificates for the arrears of interest to be capitalized on the preference bonds and stocks will be issued shortly after the meeting. The directors have pleasure in stating that contracts for the construction of portions of the Intercolonial Railway have been entered into by the Canadian Government, and the works will be commenced as soon as the snow leaves the ground. They embrace the following sections, viz.:—40 miles from Riviere du Loup, eastward; 24 miles from Restigouche, to near Eel River; 27 miles from Amherst Ridge to River Phillip. Tenders have also been invited for three more sections of the line, and the contracts are to be given out on the 29th of the present month. They are as follow:—26 miles eastward from No. 1 and 2 sections, already let; 21 ditto, No. 3 ditto; 24 ditto, No. 4 ditto. It will be seen from this that 162 miles will be let by the end of this month, and tenders for the whole of the remaining sections will it is expected, be immediately advertised for, as the intention is to have the entire length of the railway opened for traffic not later than 1872. The work will, therefore, be pushed forward with the utmost vigour. It is unnecessary to point out the important advantages the construction of this line will confer upon the Grand Trunk Railway when completed, but even during its construction a considerable addition to the traffic, particularly on the Riviere du Loup section, must result from the constant movement of men and materials over the Grand Trunk Railway to the works in progress. Nor is this all; in connection with the Intercolonial Railway a scheme has been propounded to secure a large immigration of the artisan and labouring classes, not only for their present employment, but for their permanent settlement in the dominion; and there is every reason to believe that this scheme, coupled with the general attractions that Canada now offers to intending emigrants by way of land grants, &c., will lead to a larger flow of emigration to that country.

Buffalo and Lake Huron Railway.

At the meeting of the Grand Trunk Railway Company in London on the 8th ult., the new terms for leasing in perpetuity the Buffalo and Lake Huron railway and for settling past differences, were stated to be—£30,000 to settle past differences to the 30th of June, 1868; a fixed rental of £42,500 for 1869, £45,000 for 1870, £50.000 for 1871, £54,000 for 1872, £60,000 for 1873, and from January 7, 1874, £60,000, with the addition of £5,000 a year when a dividend was paid on the third preference stock, but the total rent charge never to exceed £65,000 a year. Buffalo ordinary shares ty be exchanged for Grand Trunk ordinary stock, pound for pound. The control of the Buffalo line to be solely in the hands of the Grand Trunk. There are other terms and conditions of minor importance.

☞ Owing to the damage done in the Eastern division of the New York canals by the recent inundation, the Canal Commissioners have resolved to postpone the opening of navigation on said division until the 10th of May.

The Hook-Headed Spike Case.

This case, which was commenced in 1841, by Henry Burden, proprietor of the Troy Iron and Nail Factory, to recover damages of Corning & Winslow, proprietors of the Albany Iron Works of Troy, for the infringement of Mr. Burden's patent upon the machine for the manufacture of railroad spikes, has at length been finally adjudicated, and an award made to the complainant for his damages. The case has been twenty-eight years in the courts, during a large portion of the time, however, in the hands of the late Chancellor Walworth, of Saratoga Springs. It has become one of the *causes celebres* of the country. It was originally commenced by the late Samuel Stevens, of Albany, and upon his death Judge Elisha Foote assumed charge of it for the complainant. The total amount awarded to the complainant, including about $50,000 costs, is $80,000—a very good offset to the water-power suit recently determined against Mr. Burden and in favor of Messrs. Corning & Winslow. Chancellor Walworth commenced taking proof on the 5th of April, 1854, and finished and filed his report in May, 1863. In October, 1867, Hon. William D. Shipman, of New York, was appointed to review and pass upon Walworth's report. His decision, concurred in by Judge Nelson, as stated, has just been received.

☞ The Cecil (Md.) *Democrat* says a corps of engineers have for the past week been engaged in making surveys of various routes for a road from the coal mines of Pennsylvania to Delaware City. Their object is to accomplish the difficult feat of constructing a road that will be down grade all the way from the mines to the water. They have made several surveys already, one passing through or near Elkton, one taking a southwesterly course from Columbia and Port Deposit road, and cross ing the Philadelphia, Wilmington and Baltimore Railroad near the residence of Hon. Hiram Mc Cullough, while still another proposes to strike the Philadelphia road near North East.

☞ The Hagerstown (Pa.) *Mail* says that two corps of engineers, under the direction of the Pennsylvania R. R. Co., are surveying two different lines for the extension of the Cumberland Valley Railroad from Hagerstown to Williamsport, and also surveying a line from Mercersburg to connect that place with the Cumberland Valley Railroad at some point between Chambersburg and Hagerstown.

☞ The Springfield and Long Meadow Railroad Company was organized at Springfield on the 27th ult., with the following officers: Willis Phelps, President; D. L. Harris, clerk, and J. D. Brewer, treasurer. The road will give Springfield direct connection with New London, Conn.

☞ A dispatch dated San Francisco, April 27th, says that "Visitors have commenced congregating in the vicinity of the end of the Central Pacific Roilroad, to witness the laying of the last rail and the driving of the last spike on the Pacific Railroad, which will take place at or near Promontory Point, Utah, on Friday or Saturday next.

☞ Surveyors are at present engaged in surveying the route for a railroad to be constructed from Parkton, on the Northern Central Railroad, to Manchester, Carroll county, Md. It is now considered quite certain that the road will be built at an early day.

☞ The extension of the New York and Hackensack Railroad through Pascack Valley is being pushed vigorously, the work being under way for nearly ten miles. This road is to connect with the Erie at the State line, and will, it is anticipated, be finished this year.

☞ The Devall's Bluff *Journal* of the 7th ult., says the contract for building the railroad bridge across White river, has been let, and the work will be commenced immediately.

NEW YORK CEMENT CO.

ROSENDALE,

Ulster County, New York.

Our Cement will be, as heretofore, of FIRST QUALITY, put up in GOOD BARRELS, made by ourselves.
All orders promptly attended to.

NEW YORK CEMENT CO.,
34½ Pine St., New York.

Blue Ridge Railroad.

THE attention of Contractors is invited to the work of completing the Blue Ridge Railroad, in South Carolina, from Anderson, South Carolina, to Knoxville, Tennessee—a distance of one hundred and fifty-two miles to build.

The Executive Committee of the Board of Directors is prepared to enter into negotiations with responsible persons, who may desire to undertake the work.

Payments will be made in first mortgage (7) per cent. currency bonds of the company, secured by the guarantee of the State of South Carolina, for the punctual payment of both principal and interest. The mortgage covers unencumbered property of the company, which cost three and a quarter millions of dollars in gold, and embraces fifty miles of road complete and in running order.

Detailed Estimates, Plans, Profiles and Specifications, will be ready for inspection by JUNE 1, 1869. Meanwhile, approximate quantities and other information concerning the work may be obtained by application to Col. James P. Low, the Chief Engineer of the Company, or to the undersigned, at Columbia, South Carolina.

R. K. SCOTT,
5t18 Chairman of Executive Committee.

TO RAILWAY CONTRACTORS.

The Graduation and Masonry of the FREDERICK AND PENNSYLVANIA LINE RAILWAY, embracing twenty-eight sections of more than one mile each, are advertised for contract, and PROPOSALS for the same will be received at the Company's office in the city of Frederick, Md., up to the 25TH DAY OF MAY, inclusive. Specifications, plans and profiles of the work will be ready for inspection at the office of the Company in Frederick, and at the office of the Western Maryland Railroad, in Baltimore, from the 15th day of May, where contractors will obtain all necessary information to enable them to examine the line. The Company reserves the right to reject all or a part of each bid.

4t18 JOHN LOATS, President.

Railroad Inventions

FOR GREATER SAFETY.

The under part of the rail has feet straight or angular to prevent the moving of the rail on the sleepers. Two or more or less run parallel on the bottom, so as to press in the sleepers an inch more or less, or they may be made open, V fashion, and pieces thicker and wider across each end of the rail as chairs, or any other device on the bottom to keep the rail in its places, slots or circles open on the sides, with raised neck for the spikes or screws. The wheels with one flange or more not rounded, but straight flat, 25 degrees about; the barrel or bearing crowned like a keg or enlarged at the outer end like a keeler or pail, and elongated to lift on curves; the centre of wheels extended tubular to receive the axle; another wheel of less diameter with tube on the axle to keep it from bending and catch the car and keep it safely in case of accident. These rails of steel are for sale, as well as iron with harden tops, wheels, etc., etc., or any part of them, or 1,000 tons of each, or less, will be furnished to companies on demand, or a royalty will be charged by the inventor.

PRATT'S
PATENT COMPENSATING FISH-JOINT,

MADE BY

VERREE & MITCHELL,

IRON AND STEEL MANUFACTURERS,

No. 939 North Delaware Avenue, Philadelphia, Penn.

COMBINES MORE ADVANTAGES THAN ANY FISH-JOINT HERETOFORE INTRODUCED.

This Joint is made of two heavy bars of wrought iron, or cast steel, sixteen inches in length, or any other desired length, fitted to the side of the rail and secured by four three-quarter inch bolts, with four malleable cast-iron cups and washers, and a gum ring two inches in diameter and half an inch thick, in each cup.

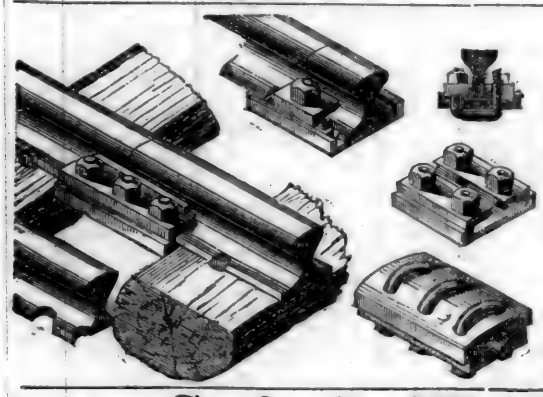
The value of gum to absorb jarring motion is well known; but when the pressure is as great as that required to secure the ends of railroad rails, some device, or method by which to prevent the gum from being forced out from under the washer, when subjected to increased pressure, is indispensable. The PATENT COMPENSATING FISH-JOINT secures that effect and enables Railroad Managers to apply all the force and pressure desired.

Where this Joint is securely fastened by screwing the nut upon the washer and gum in the cups with a lever three feet in length, it makes a perfectly tight joint, and thus secures what Railroad Managers have long desired—*a continuous rail*, with sufficient elasticity in the gum to relieve from and compensate for the sudden jar and at the same time allow for expansion and contraction by heat or cold.

We confidently claim for the PATENT COMPENSATING FISH-JOINT:

That it makes the best and cheapest form of fastening, requiring no plate or chair underneath the foot of the rail.

That it is safe and secure, and prevents the numerous accidents resulting from loose or broken rails.



That this Joint absorbs the vibratory shock given by the wheels in passing over the ends of rails, and thereby preventing fracture; and we have yet to hear of the first rail having been broken with our Joint on it.

That it can be applied in repairing and relaying with the least trouble and delay.

That the materials are indestructible, and make A PERFECT AND CONTINUOUS RAIL, thus securing what has long been desired, and what all previous experiments have failed to attain.

The Manufacturers can supply these Joints, complete in all their parts, ready to be fastened to the rails with dispatch.

Refer to all the Leading Railroads in the Country.

American Railroad Journal.

New York Saturday, May 8, 1869.

Railway Economy.

In a previous No. of the JOURNAL we published a letter from J. H. Moore, Esq., Commercial and General Agent of the Pittsburg, Fort Wayne and Chicago Railway Co., addressed to Mr. J. N. Mc Cullough, General Superintendent, which contains much valuable data, and other matters of great interest.

The subject of Railway Economy, which simply means reform in the management of the railway, whereby many times more work can be done, freights lessened in cost, and Railway property at the same time be made more productive by increased patronage, is commanding a degree of attention in this country and England which will probably ripen into the adoption of a system that will add two-thirds to the efficiency of the railway, decrease the cost of transit more than one-half, give better dividends, and benefit the interests of agriculture, mining, the mechanical interests, trade and commerce to an almost incalculable degree.

The Public Economists of England are taking up the subject of Railway Economy in a way that promises great improvement. The movement is led by Sir Rowland Hill, and John Galt, Esq., of London; the former, will be recollected as author of the cheap postage system, while the latter is known as one of the most vigorous writers of England on subjects appertaining to the cheapening and increase of production. It seems that the British Cabinet, with the exception of Mr. Bright, are unanimous in seconding the views of the Queen's Commission, appointed something over a year ago, and which occupied, substantially, the same ground as the American "Cheap-Freight Railway League" whose scheme we have heretofore published. It is gratifying to our national vanity to know that the plan by which the anticipated benefits are to be achieved originated in the United States, and is the result of a fifteen years' investigation by one of our own citizens.

Mr. Moore agrees, in a great measure, with Mr. Sherwood, President of the National League, as to the immense freight capacity of a road where all the trains are moved at a moderate, but uniform rate of speed. Mr. Moore estimates the freight capacity of such a road between Chicago and New York at 8,640,000 tons each way, while Mr. Sherwood computes its freight power at 16,000,000 tons to go in each direction. Mr. Moore suggests, that, on an average of $9.00 per ton, the gross earnings of the road might be swelled to $30,000,000 per year. Mr. Sherwood maintains that under his suggested combination of economies $5.00 per ton would be an outside price. It is quite evident that when the views of the two gentlemen are fully compared, the one has studied the question with reference to the amount that a Railway Company could make, while the other has looked in all collateral directions to see how much could be gained and saved to the people and the industries of the country after giving to Railway Capital a liberal income.

The President of the Board of Trade of Chicago is out in a letter urging the establishment of a cheap-freight Railway between Chicago and New York as an imperious commercial necessity. We not only assent to his views but go further. It is equally an agricultural necessity. It is scarcely less important to the consumer than the producer. It is a well known principle in Political Economy that whatever can be saved in the expenses of production and distribution redounds equally to the benefit of producer and consumer. The utilization of the railway by adding to its freight power, accompanied by decrease of cost in transport, must be attended with beneficial results nearly alike to all the producing industries, and not only that, it would increase Railway patronage to a degree that would make Railway property the most successful of investments.

The comprehensiveness of Mr. Sherwood's plan aims at nothing less than a National system, to be predicated on an exact combination of economies, and all regulated with reference to acquiring freight power and decreasing cost of transportation. The scheme is best illustrated by the provisions of the Bill lately introduced into Congress by Mr. Cullom of Illinois. It provides for the construction of a road from the Mississippi River with *termini* at New York, Boston, and Philadelphia, the same to be a common trunk thoroughfare for some ten thousand miles of road in the west already built and equipped. To illustrate—Ohio has 3,000 miles of Railway, but no common thoroughfare to accommodate these roads in going over the long stretch down to the Atlantic Coast. This common Trunk thoroughfare is designed by the author of the cheap-freight scheme to give all the western roads, whose privileges are merely local at present, an equal advantage with the roads terminating at the coast. As the case now stands the vast system of roads in the west are mere feeders of the New York Central, Erie, Pennsylvania, and Baltimore and Ohio. These roads by their position have become the arbitors of the value of Western Railway property. Mr. Sherwood's plan proposes virtually to lengthen out the roads of the west from eight to twelve hundred miles each. For instance, all the roads centering at Chicago would have the privilege of going with their cars and freight a thousand miles further by paying a toll that would not amount to one-third of the expense per mile that it would cost to keep their own road in repair. The roads centering at St. Louis, Cincinnati, Cleveland, or other places would have the same advantages by proper connections.

Mr. Moore's plan contemplates a monopoly of transport, and suggests that in order to transport 8,640,000 tons of freight east and the required amount west, it would require 3,000 locomotives and 65,000 freight cars. Instead of making a

monopoly of the business of carrying, Mr. Sherwood maintains that the western roads should have the privilege of increasing their rolling stock and carrying their freights through, and also that outside transportation companies may be formed, and that equal advantages shall be accorded to all carriers. It would require but a few trunk roads of the character of that embraced in Mr. Cullom's Bill to accommodate and invigorate the whole railway system of the United States, and to make it what it ought to be, a manifold more effective agency to increase production and develope the resources of the country.

While we announce our intention to advocate and uphold the interests of railway property, we shall urge the equalization of advantages between the roads of the interior and the sea-board. We regard the roads of the interior as being placed under severe disabilities, that, from all motives of justice and sound public policy, requires disenthrallment. The life of the East is dependent on the development of the West. The interests are reciprocal and mutual, and any clog to free, economical, and vigorous commercial intercourse is alike destructive to the interests of all, and when duly considered, will be found advantageous to none.

Frederick and Pennsylvania Line R. R.

This work is beginning to assume a shape which justifies the hope that it will be pushed to completion at an early day. At a meeting of the Directors of the Company last week, held in this city, it was determined to put the whole line under contract for graduation and masonry forthwith, proposals for which are advertised in to-day's paper.

At this time the attainment of the right of way forms the principal object, and so far the agents of the company have been eminently successful. In the main they have been met in a fraternal spirit. The great importance of the work being conceded, a large majority of the owners of property along the line of survey have made concessions which do them honor. There is but little to complain of on this score.

The whole distance from Frederick to Pennsylvania Line is less than twenty-eight miles. It is estimated that the cost of construction will not exceed $20,000 per mile, as the grade will not exceed forty feet to the mile, and there will be very little deep cutting and no tunneling. The distance from the Pennsylvania Line to Littlestown will be constructed by our friends on the other side of the Line. The company propose making a first-class road, with substantial iron bridges, &c.—*Frederick Examiner.*

Old Iron Rails.

There are but few persons, outside of those immediately interested, who know anything of the extent and importance of the present trade of this port in "old iron rails." For three months, ending 12th April, we have had arrived, direct from ports in Great Britain, twelve vessels, bringing 5,727 tons, the duties on which paid to the government amounted to upwards of $50,000, gold. Besides the above there were received from New York twenty small cargoes—making an aggregate of 3,394 tons. The whole quantity, both foreign and coastwise, reaching 9,121 tons, was landed at Jackson's wharf, Fell's Point, and from thence per Northern Central railway, transported into the interior of Pennsylvania, there to be converted into new rails. In addition to the above there were also received within the same period by the Abbott Rolling Mill, in this city 1,500 tons old rail, on which about $12,000 additional duties were collected. These old rails, at the average value duty paid and free on cars, say $48 per ton, presents a valuation of $609,800 in currency, which is quite an important trade for three months. The larger portion of this business has been drawn to Baltimore through the influence of the Northern Central Railroad; it had previously gone to Philadelphia. Every inducement was made by that company for its coming here, and one of the chief arguments used was the fact of our city possessing an ice-boat capable during the winter of keeping the harbor always accessible.—*Baltimore Price Current.*

Bessemer Steel Rails.

The *Iron and Coal Trades Review* refers to an important change about to occur in one branch of the iron business, from the termination of the Bessemer patents. The principal part of these patents expires next year, but Mr. Bessemer, it is said, has patented so many of the appliances, blowing engines, valves, and combinations, that he will have claims for royalties for several years after the lapse of the patents which are absolutely essential to the process with which his name is identified. It is understood, however, that after conferring with his leading licensees he has signified his willingness to reduce his royalties from their present high rate of £2 per ton on everything (except steel rails, for which a rebate of 20s. per ton of finished rails is allowed) to a charge of 2s. 6d. per ton. This, it is added, will practically reduce the price of ordinary Bessemer steel £2 per ton, and rails about 30s. per ton, so that the manufacturers of iron rails have before them the prospect of seeing steel rails in the market at £9 per ton, in the course of another year or so. "The margin between iron and steel rails will then be so small that it is easy to see that a great impetus will be given to the steel rail trade, and should no difficulty be experienced in obtaining the necessary supplies of pig iron suitable for conversion into Bessemer steel, it is hard to say how far the development of the manufacture of cheap steel will be carried."—*London Times.*

Pennsylvania Railroad Company.

The aggregate receipts of the company from the operations of its works, including the Philadelphia and Erie Railroad, for the years 1867 and 1868, have been as follows:

	1867.	1868.
Pennsylvania R. R.	$16,340,156 36	$17,233,497 31
Philadelphia & Erie R. R.	2,333,759 94	2,804,250 36
Total gross earnings	$18,673,916 30	$20,087,747 67
Deduct expendit's.	14,768,412 01	14,748,408 89
Net earnings	$3,905,504 29	$5,289,338 78

The following exhibits the earnings and expenditures of the Pennsylvania Railroad and branches for the same years:

	1867.	1868.
From first class passengers	$3,431,508 13	$3,531,903 94
From emigrant passengers	121,653 26	78,244 29
From U. S. troops	65,240 48	.....
From U. S. mail	84,931 08	99,981 25
From regular exp. / From extra express	330,494 60	291,881 21
From freight	11,832,299 67	12,882,165 30
Rent of property / Miscellaneous	474,028 54	349,321 82
Gross earnings	$16,340,156 36	$17,233,497 31
Expenditures for—		
Conducting transp.	$3,517,258 83	$3,609,233 18
Motive power	3,252,143 37	3,361,694 72
Maintenance of road	3,602,748 92	3,268,896 44
Maintenance of cars	1,528,387 82	1,442,785 90
General expenses	179,760 70	178,423 92
Total expenses	$12,080,269 64	$11,860,983 88
Earnings less exp.	$4,259,856 72	$5,372,513 43

The mileage of track in use on the road and branches, including sidings and second tracks at the commencement of the years respectively, was 1,108.50 / 1,152.05; added during the year 43.95 / 127.57; in use at end of year 1,152.05 / 1,279.48—accounted for as follows:

Main Line	867.71	875.57
Branches owned	52.00	52.00
" leased	195.90	304.49
Private sidings	36.44	47.12
Total length in miles	1,152.05	1,279.48

The whole length of the Main line is now double track.

The number of locomotives on the road at the commencement of the years 1867 and 1868, was 362 / 415; and at its termination 415 / 434

The mileage of engines in each year, was as follows:

	1867.	1868.
Passenger engine mileage	1,922,230	2,051,625
Freight "	5,898,060	6,355,865
Distributing "	286,488	285,838
Total mileage	8,026,778	8,693,328

The number of cars on the road at the end of each year, was as follows:

	1867.	1868.
Passenger, baggage and express	291	325
Freight and coal	5,744	6,208
Other cars (in maintenance department)	649	677
Individual cars	2,536	2,811
Total	9,220	10,021

The number and mileage of passengers carried were as follows:

	1867.	1868.
Passengers	3,347 466	3,747,178
Miles traveled	126,534,225	133,174,706

The tons of freight and the miles each ton was carried, was as follows:

	1866.	1867.	1868.
Merchandize	1,778,178	2,028,501	2,362,835
Coal	1,413,181	1,680,723	2,065,049
Fuel and material	266,859	291,314	294,131
Total (tons)	3,452,718	4,000,538	4,722,015

The mileage of tonnage in 1866, was 513,102,181. No reports of mileage have been published for 1867 and 1868.

PHILADELPHIA AND ERIE RAILROAD.

The earnings of the Philadelphia and Erie Railroad for the years 1867 and 1868, compare as follows:

	1867.	1868.
From passengers	$635,134 83	$631,437 59
" troops	2,806 82	.....
" freight	1,631,902 02	2,101,613 98
" express matter.	28,875 10	30,954 88
" mails	18,436 08	21,518 04
" miscel. sources	16,605 09	18,726 42
Total earnings	$2,333,759 94	$2,804,250 36

The operating expenses for the same years were:

Transportation	$565,295 61	$610,774 32
Motive power	648,359 43	677,028 49
Maintenance of way	624,772 60	600,284 40
" cars	172,445 22	178,918 85
Total operating exp.	$2,010,872 86	$2,067,001 06
Thirty per cent. due on lease to meet interest on bonds, etc	677,239 51	820,423 95
	$2,688,112 37	$2,887,425 01
Loss on operation	$354,352 43	$83,174 65

The canals which were held by this company until 1867, have been sold to an independent company. In 1866, the last year of this company's operations the earnings were $297,867, and the expenses, $233,438.

GENERAL ACCOUNT.

The General Account, showing the financial condition of the company December, 1867 and 1868, presents the following balances:

	1867.	1868.
Capital stock	$21,045,750 00	$27,040,762 50
Funded debt, (bonds,) viz:		
1st mort. 6 per ct. dollar, 1880	4,972,000 00	4,972,000 00
2d mort. 6 per ct. dollar, 1875	2,597,000 00	2,594,000 00
2d mort. 6 per ct. sterling, 1875	2,283,840 00	2,283,840 00
Bonds due State 5 per cent	6,375,733 43	6,232,755 93
Mortgages and ground rents	117,809 32	117,809 32
Short bonds, 6 per cent	3,400,000 00	3,520,728 00
Total capital and debt	$40,851,132 70	$48,306,894 75
Bills and accounts payable	2,727,493 25	3,361,867 50
Extra divid'd fund	1,300,000 00	.....
Contingent fund	1,000,000 00	1,606,250 00
Balance	221,798 95	869,232 62
Total debit side	$46,100,424 95	$54,143,744 87
Cost of road and appurtenances	$13,540,950 00	$13,563,629 75
Columbia R.R. and State Canal	5,375,733 43	5,375,733 43
Equipment	4,476,849 98	4,476,849 98
Real estate and telegraph line	3,481,641 54	3,978,657 98
Extension of road to Del. River	2,239,843 95	3,266,661 51
Total cost of roads and canals	$29,115,018 90	$29,761,532 65
Harrisburg & Lancaster Railroad stock	$732,950 00	$732,950 00
Connecting Railway stock	1,262,978 69	1,277,350 00
Pennsylvania canal stock	1,101,155 00	1,101,155 00
Western Pennsylvania R.R. stock and bonds	554,304 58	.....
Stock and bonds of Pittsburg, Cincinnati and St. Louis R. R	5,575,519 33	5,638,450 09
Philadelphia & Erie R. R. stock	779,637 26	779,637 26
Other bonds and stocks of municipal and railroad companies	522,343 67	1,283,433 34
Bills and accounts receivable	1,593,062 03	6,618,527 20
Debit of sinking fund	2,000,756 69	2,301,429 29
Fuel and materials on hand	1,074,947 07	1,409,829 86
Advanced to Phila. phia & Erie R.R.	735,297 57	890,721 52
Balance in hands of agents and treasurer	1,052,454 16	2,458,728 66
Total credit side	$46,100,424 95	$54,143,744 87

The following summary exhibits the condition of the capital account for the past twelve years embracing the whole period since the completion of the line:

	Share Capital.	Bonds and Mortgages.	Total Amount.	Cost of Property.
	$	$	$	$
1855.	12,355,525	7,519,096	19,874,621	18,483,489
1856.	12,646,625	8,516,841	21,163,466	19,048,968
1857.	13,206,625	14,929,940	28,136,565	27,266,981
1858.	13,240,225	16,094,451	29,334,676	27,670,672
1859.	13,349,125	16,469,159	29,818,284	28,484,321
1860.	13,261,960	16,680,804	29,942,764	28,846,442
1861.	13,264,100	16,936,764	30,200,864	29,587,678
1862.	13,274,100	16,696,764	29,970,864	29,888,552
1863.	13,430 250	16,949,124	30,379,374	30,592,298
1864.	19,896,060	16,802,124	36,698,184	31,024,891
1865.	20,000,000	16,750,124	36,750,124	31,809,384
1866.	20,000,000	18,209,040	38,209,040	29,013,854
1867.	21,045,750	19,687,573	40,733,323	29,115,019
1868.	27,040,762	21,266,132	48,306,894	29,761,533

In 1857, and since, the funded debt and cost of property includes the State Works purchased by the company for $7,500,000, which is payable in annual instalments, which diminish the amounts debited and credited to the State and company respectively.

The earnings and expenses of the railroad and dividends for the same years have been as follows:

	Gross Earnings.	Operating & Repairs.	Profits on operations.	Divi-d'ds.
1855.	$4,270,070	$2,840,738	$1,829,277	6
1856.	4,720,124	2,814,568	1,905,626	6
1857.	4,855,659	3,000,743	1,854 826	3½
1858.	5,185,331	3,021,885	2,163.436	5½
1859.	5,362,365	2,130,738	2,231,617	6
1860.	5,932,701	3,636,659	2,296,042	6
1861.	7,300,001	3,653,063	3,646,938	6
1862.	10,304,291	5,431,073	4,873,218	8
1863.	11,891,415	6,780,000	5,111,413	9
1864.	14,759,058	10,693,944	4,065,114	10
1865.	17,459,169	13,270,058	4,189,111	10
1866.	16,583,883	12,790,909	3,792,974	9
1867.	16,340,156	12,080,299	4,259,857	6
1868.	17,233,497	11,860,984	5,372,513	8

Stock dividends, May, 1864, 30 per ct.; May, 1867, 5 per ct.; and May, 1868, 5 per ct.

The earnings and expenses of the canals, not included in the above, were:

	Gross Earnings.	Operating Expenses.	Profits on operations.	Losses on operations.
1857 (5 mos.).	$92,434	$73,191	$19,243	$.....
1858	179,100	124,058	55,042	.....
1859	197,549	175,452	22,097	.....
1860	209,366	154,761	54,605	.....
1861	176,109	147,872	28,237	.....
1862	251,482	258,092	.....	6,610
1863	287,156	362,374	.....	75,218
1864	808,615	810,555	.....	1,940
1865	181,015	279,843	.....	98,828
1866	297,867	233,438	64,429	.....
1867	} Now operated by an independent company.			
1868				

The company entered on possession of the Philadelphia and Erie Railroad on the 1st of February, 1862, since which date the earnings and expenses thereof has been as follows:

	Gross Earnings.	Operating and Repairs.	Earnings less Expenses.	30 per ct. of Gross Earn'gs.†
1862*	$425,687	$226,647	$199,040	$122,697
1863	725,670	336,596	389,074	218,301
1864	1,131,148	838,594	292,554	335,709
1865	2,074,140	1,746,052	328,088	598,708
1866	2,541,052	2,086,975	454,077	732,739
1867	2,333,760	2,010,873	322,887	677,239
1868	2,804,250	2,067,001	737,249	820,424

* 11 months.

† This amount (after all drawbacks) is set apart under the lease to pay interest on the bonds of the Philadelphia and Erie Railroad Company.

☞ The Wilmington and Reading Railroad will be in running order from Wilmington to Coatesville, by September or October next.

False Political Economy.

It is said that $2,000,000 have been offered for the franchise of the Broadway Railroad in case the Bill is passed into a law. If so, the bid is indicative of the course in which we are drifting under the lead of political speculators in conjunction with legislative venality, combined to rob the people.

The offer of two millions for this franchise implies the intention of straining exactions on passengers to recoup the outlay for the purchase, and to make profitable dividends on the stock of the road—in other words, it simply means iniquitous imposition on the public. Such has become the character of legislation on the part of those, who, under various contrivances, are sent to the Legislature, not to represent, but, to betray their constituents.

There is no necessity or excuse for any such enactment, or the passage of a Bill fraught with the elements to work out such imposition. If there must be a Broadway Railroad it is easy to put it on the plan of construction recommended by the "National Cheap-Freight Railway League"—that is—build and equip the road for cash—put on such rates of fare as would give liberal income on the investment—interdict any watering of the stock, reserving power in the Legislature to limit the charges on the passengers. Under this arrangement the public would have fair protection.

We hear of associations for the detection, arrest, and punishment of horse thieves. Were two millions of dollars worth of horses stolen at a time it would put the whole country under an earthquake excitement. The Press would teem with animadversions, the criminal Courts be crowded, judges be charging juries to do their duty in arresting the progress of crime, while the Penitentiaries of Auburn, Sing-Sing, and Clinton would be made to overflow with convicts.

What is the difference in the morality or crime between robbing the people of $2,000,000 in value of horses, or $2,000,000 in money? In these days of constitutional amendments perhaps it would be well to incorporate into the fundamental law of the United States, and of every State a provision to compel Congress and the respective Legislatures to explain, by concurrent resolution, the difference and respective merits of these robberies. For ourselves, contemplating republican institutions disgraced, legislation debauched, and evil in its most contaminating form propagated and sheltered from just accountability, the horse thieves in our judgment might find the most plausible excuses: still, we are so much in doubt that we invite criticisms on our opinion, and for the publication of which, our columns will be open.

☞ The Iron Ridge and Mayville (Wis.) Railroad Co. has been organized with the following Board of Directors: J. M. Bean, of Milwaukee; F. Paustian, Chas. Reudebusch, R. and Dr. A. Sauerherring, D. Naber and J. A. Barney, of Mayville. F. Paustian is President of the Board.

☞ The East Pennsylvania Railroad Company have declared a stock dividend of one hundred per cent., payable on the 12th of May. The road has been leased for 999 years to the Philadelphia and Reading Railroad Company.

United States Supreme Court.

THE INTERNAL REVENUE LAWS—UNIFORMITY OF TAXATION—RETURNS IN COIN—THE TAX ON BUSINESS—IT IS NOT A DIRECT TAX, BUT A DUTY OR EXCISE—DIRECT TAXES CONSIDERED AND DEFINED.

The Pacific Insurance Company vs. *Frank Soule, Collector of Internal Revenue.*—On a certificate of division from the Circuit Court of California, Mr. Justice SWAYNE delivered the opinion of the Court: The plaintiff brought an action to recover back certain taxes upon its business and income, which it had paid to the defendant upon compulsion and under protest. The defendant demurred to the plaintiff's complaint. Upon the argument of the demurrer, the opinions of the Judges of the Circuit Court were opposed upon several questions, which are set forth in the record. According to the view which we take of the case, it will be sufficient to answer two of them. They cover the entire grounds of the controversy between the parties, and their determination will be conclusive. They are the first and the sixth. The first is: Whether that portion of the ninth section of the act of Congress approved July 13, 1866, entitled "An Act to reduce internal taxation, and to amend an act entitled 'An Act to provide internal revenue to support the Government, to pay interest on the public debt and for other purposes,'" approved June 30, 1864, and acts amendatory thereof, which provides as follows, to wit: "That it shall be the duty of all persons required to make returns or lists of income, and articles or objects charged with an internal tax, to declare in such returns or lists whether the several rates and amounts therein contained are stated according to their values in legal-tender currency, or according to their values in coined money; and in case of neglect or refusal so to declare, to the satisfaction of the Assistant Assessor receiving such returns or lists, such Assistant Assessor is hereby required to make returns or lists for such persons neglecting or refusing, as in cases of persons neglecting or refusing to make the returns or lists required by the acts aforesaid, and to assess the duty thereon, and to add thereto the amount of penalties imposed by law in cases of such neglect or refusal. And whenever the rates and amounts contained in the returns or lists as aforesaid shall be stated in coined money, it shall be the duty of each Assessor receiving the same to reduce such rates and amounts to their equivalent in legal-tender currency, according to the value of such coined money in said currency, for the time covered by said returns. And the lists required by law to be furnished to Collectors by Assessors shall in all cases contain the several amounts of taxes or duties assessed, estimated or valued in legal-tender currency only—is to be construed as merely providing a rule as to the currency in which accounts, returns and lists are to be stated, with a view to uniformity in keeping the accounts of internal revenue, or whether it is to be construed as denying to a person who has received in coined money, incomes or other moneys subject to tax or duty, the right to return the amount thereof in the currency in which it was actually received, and to pay the tax or duty thereon in legal-tender currency, and be construed to require that the difference between coined money and legal tender currency shall be added to his return when made in coined money, and that he shall pay the tax or duty upon the amount thus increased." We think there can be no doubt as to the proper solution of this question. A brief analysis of the provisions of the statute which bear upon the subject will be sufficient to maintain the conclusion at which we have arrived:

1. The person making the returns is required to declare whether the amounts set forth in it are stated according to their value in legal-tender currency or in coined money.

2. If he fail to do so he is subjected to a penalty, and the Assessor is required to make the returns for him.

3. The list, with all the amounts therein stated, according to their values in legal-tender currency, is to be placed by the Assessor in the hands of the collector.

4. The Assessor is charged with the aggregate amount and credited with his collections and otherwise, as is provided by the statute.

5. The taxes are made a lien, and, in default of payment, property is to be siezed and sold by the Collector. Both personal and real estate are liable. Full directions are given for the conduct of the proceedings.

The meaning of the statute, examined by its own light, is so clear that argument or illustration is unnecessary. It was the object of Congress to provide a uniform basis of taxation, in order to secure uniformity in the burdens imposed. "Equality is equity." According to the theory of the plaintiff, it had a right to have the assessment made upon the amounts received in coin, and to pay in currency, while others, whose receipts were in currency, were to be taxed upon that basis, and to pay in the same medium as the plaintiff. Such a result would be subversive of the plainest principles of reason and justice. It cannot be supposed that such was the intention of those who framed the law. Certainly nothing in its language would warrant the construction contended for. Where the power of taxation exercised by Congress is warranted by the Constitution as to mode and subject, it is, necessarily, unlimited in its nature. Congress may prescribe the basis, fix the rates, and require payment as it may deem proper. Within the limits of the Constitution it is supreme in its action. No power of supervision or control is lodged in either of the other departments of the Government. To this question it must be answered that the statute did deny to the plaintiff the right to have the assessment made otherwise than as it was made by the Assessor, and that it required the plaintiff to pay the amount of the taxes set forth in the list delivered by the Assessor to the Collector, and which was paid by the plaintiff under protest, as appears by the record.

The sixth question is, "Whether the taxes paid by the plaintiff, and sought to be recovered back in this action, are not direct taxes, within the meaning of the Constitution of the United States.

In considering this subject it is proper to advert to the several provisions of the Constitution relating to taxation by Congress. "Representatives shall be appointed among the several States which shall be included in this Union according to their respective numbers." (Art. 1, Sec. 2.) "Congress shall have power to lay and collect taxes, duties, imports and excises; to pay debts and provide for the common defence and welfare of the United States." (Art. 1, Sec. 8.) "No capitation or other direct tax shall be laid unless in proportion of the census of enumeration hereinbefore directed to be taken." "No tax or duty shall be laid on articles exported from any State." (Art. 1, Sec. 9.) These clauses contain the entire grant of the taxing power by the organic law, with the limitations which that instrument imposes. The National Government, though supreme within its own sphere, is one of limited jurisdiction and specific functions. It has no faculties but such as the Constitution has given it, either expressly or incidentally, by necessary intendment. Whenever any act done under its authority is challenged, the proper sanction must be found in its charter, or the act is *ultra vires* and void. This test must be applied in the examination of the question before us. If the tax to which it refers is a "direct tax," it is clear that it has not been laid in conformity to the requirements of the Constitution. It is, therefore, necessary to ascertain to which of the categories named in the eighth section of the first article it belongs. What are direct taxes was elaborately argued and considered by this Court in Hylton *vs.* The United States, (3 Doll., 321,) decided in the year 1796. One of the members of the Court, Mr. Justice Wilson, had been a distinguished member of the Convention which framed the Constitution. It was unanimously held by the four Justices who heard the argument, that a tax upon carriages, kept by the owner for his own use, was not a direct tax. Mr. Justice Chase said: "I am inclined to think, but of this I do not give a judicial opinion, that the direct taxes contemplated by the Constitution are only two, to-wit: a capitation or poll-tax simply, without regard to property, profession, or any other circumstance, and a tax on land." Patterson, Justice, followed in the same line of remark. He said: "I never entertained a doubt that the principal, I will not say the only object the framers of the Constitution contemplated, as falling within the rule of apportionment, was a capitation tax and a tax on land." Again he said: "The Constitution declares that a capitation tax is a direct tax; and both in theory and practice, a tax on land is deemed to be a direct tax. In this way the terms 'direct taxes' and 'capitation and other direct tax' are satisfied." The views expressed in this case are adopted by Chancellor Kent and Justice Story in their examination of the subject, (1 Kent's Com., 267; Story on the Constitution, 670; see, also, Rowle on the Constitution, 8; *The Federalist*, No. 34, and And, Tuck, Black, IV., App. 294.) Duties are defined by Tomlin to be things due and recoverable by law. The term in its widest signification is hardly less comprehensive than "taxes." It is applied in its most restricted meaning to customs; and in that sense is nearly the synonym of "imposts," (Tomlin's Law Die, "Duty;" 1 Story's Constitution, sec. 952; Hylton vs. U. S., 3 Doll., 171.) Impost is a duty on imported goods and merchandise. In a larger sense, it is any tax or imposition. (Story's Constu., Obr., sec. 474.) Cowell says it is distinguished from custom "because custom is rather the profit which the prince makes on goods shipped out." Mr. Madison considered the terms "duties" and "imposts" in these clauses as synonymous, (Cowell's Intr. "Impost," 1 Story, Constu., 669—note.) Judge Tucker thought "they were probably intended to comprehend every species of tax or contribution not included under the ordinary terms "taxes and excises." Excise is defined to be an inland imposition, sometimes upon the consumption of the commodity, and sometimes upon the retail sale, sometimes upon the manufacturer and sometimes upon the vender, (Bateman's Excise Law, 96; 1 Story's Constu., 953; 1 Black, Com., 318; I Tuck. Black., App., 341.) The taxing power is given in the most comprehensive terms. The only limitations imposed are that direct taxes, including the capitation tax, shall be apportioned; that duties, excises and imposts shall be uniform, and that no duties shall be imposed upon articles exported from any State. With these exceptions, the exercise of the power is in all respects unfettered. If a tax upon carriages, kept for his own use by the owner, is not a direct tax, we can see no ground upon which a tax upon the business of an insurance company can be held to belong to that class of revenue charges. It has been held that Congress may require direct taxes to be laid and collected in the Territories as well as in the States. (Louborough *vs.* Blake, 5 Wheat., 317.) The consequences which would follow the apportionment of the tax in question among the States and Territories of the Union in the manner prescribed by the Constitution, must not be overlooked. They are very obvious. Where such corporations are numerous and rich, it might be light; where none exist it could not be collected; where they are few and poor, it would fall upon them with such weight as to involve annihilation. It cannot be supposed that the framers of the Constitution intended that any tax should be apportioned, the collection of which on that principle would be attended with such results. The consequences are fatal to the proposition. To the question under consideration it must be answered that the tax to which it relates is not a direct tax, but a duty or excise; that it was obligatory on the plaintiff to pay it. The other questions certified up are deemed to be sufficiently answered by the answers given to the first and sixth questions.

Grand Trunk Railway of Canada.

We gave last week the report of the directors of this company for the half year ending December 31, 1868. The following is the report of the engineers, Mr. E. P. Hannaford and Mr. J. F. Barnard:

Sir,—We beg to submit our report of the working of this department during the half year ending 31st December, 1868. The expenditure was as follows:

Maintenance.	Renewals, including improvements.	Total.
$337,648 39	$616,955 72	$954,604 11

The cost of maintenance during the six months ending December, 1868, was $33,507 96 less than in the corresponding period of 1867, and must continue to decrease in proportion as the permanent way improves, and also be reduced as labor becomes less expensive on those portions of the road in the United States. The prices there are still 50 per cent. more than before the war. The new and re-rolled rails put into track during the year 1868, were as follows:

District.	Toronto re-rolled. Miles.	English new Miles.	Portland re-rolled. Miles.	Detroit re-rolled. Miles.	Total. Miles.
Detroit	..	..	..	2½	2½
Portland	..	..	17	..	17
Western	18	..	..	..	18
Central	35½	18	..	..	53½
Montreal and Island Pond	3¼	14	..	..	17¼
Champlain	1	..	..	..	1
Buffalo and Goderich	10¼	..	..	..	10¼
Total	68	32	17	2½	119½

of which 88¼ miles were laid during the half year ending December. The number of new ties put into track during the year was 491,993, compared with 415,234 in 1867, and we have succeeded in procuring a larger proportion of white oak and tamarac than usual.

Ballasting.—As you are so fully aware of the necessity of completing the ballasting of the line, and the economy which would be caused thereby, we need not dwell at length on this subject.

Bridges and Culverts.—Having furnished you with our usual detailed yearly report on each bridge, we would add, the bridges between Montreal and Detroit, Richmond, Three Rivers, and Riviere du Loup, being built of iron and stone, preserve their original condition. They have all been carefully examined, and repairs done where necessary. A large outlay has been made on the Buffalo district, the whole of the bridges being of wood and having generally rough tressel-work approaches instead of masonry, thus entailing heavy expense to maintain. Twenty-one bridges have been rebuilt much more substantially than the original structures; also, the Grand River Bridge, at Paris, 768 feet in length, has been renewed in wood. The wooden bridges between Montreal and Portland have received general repairs, and several of the trusses arched; the whole being now in good working condition. The ferry works at Buffalo and Fort Erie have received general renewals, and of a much more permanent and useful character than the original. The culverts have received general repairs.

Stations, Buildings, and Wharves.—The station buildings have received the usual repairs; platforms renewed, and the buildings generally are in good order. The wharves at Portland, Goderich, and Sarnia have been repaired and their approaches dredged.

Fencing.—Seventy-six miles have been rebuilt between Montreal and Toronto, in addition to the general repairs, but a considerable outlay requires to be made on the Buffalo district, between Montreal and Toronto and Portland and Island Pond, as the original fences were imperfectly built, and not in all cases sufficient to keep cattle from the track.

Rails.—The rails latterly re-rolled in the United States and Toronto have proved superior to new rails imported from England. This is a very important fact, as we are of opinion new rails made from ores direct from the mine should be better in every respect than rails made from old material, which from successive re-heating and the mixture of different qualities of iron must of necessity prove inferior to rails made from new iron properly manufactured. In former years imported English rails have stood the test of our climate with success, although of lighter section than those now laid, and we are unable to understand why English rails cannot now be made to stand, and must press upon you the urgent necessity of insisting upon the works employed to make rails for us in England turning them out better than those imported during the past two years. The complaint we now make about the quality of English imported rails is almost universal amongst all railway companies in the United States and Canada. The one-third of a mile of Bessemer steel rails laid in 1865, near Kingston, continue to show no failure; not one rail has been replaced or likely to be for years, although the traffic at this place is more than ordinary. Some of the best iron rails laid at the same time and locality as the steel, have had to be removed, and others considerably worn, must come out this year. The general condition of the track and works as compared with former years is satisfactory, but we would again call your earnest attention to the question of the quality of imported rails; as, until we get English rails to stand, the annual cost of renewals of iron must of necessity continue heavy, and during the present year we must incur a large outlay owing to the bad quality of most of the English rails, and their need of being replaced before they have lasted even the lowest average. The description of rails in track, 31st December last, was as follows:

District.	Fish-jointed T Rails. Miles.	U Rails. Miles.	In chairs T Rails. Miles.	Total. Miles.
Detroit	59	..	..	59
Western	137	53	..	190
Central	300	33	..	333
Buffalo and Goderich	104	..	57	161
Berlin Branch	1	6	..	7
Champlain, including Bona Bich	6	..	78	84
Montreal and Island Pond	116	22¼	5¾	144
Quebec and Richmond	9¾	11	75¼	96
Riviere du Loup	..	118	..	118
Arthabaska	2½	13½	19	35
Portland	128¼	21¾	..	150
	868½	278½	235	1,377

The capital account to the 31st December, showed that £18,099,579 had been expended.

Milwaukee and St. Paul Railway.

The Madison *Democrat* says that the whistle of the locomotive is now heard every day on the new track of the Milwaukee and St. Paul Railway, now being constructed between that city and Sun Prairie, and adds:—

Probably in less than two months the iron will be all laid, and the road ready for use between Madison and Milwaukee. In such case it will doubtless be used for the through trains between Milwaukee and Prairie du Chien, it being about seventeen miles nearer than by Milton Junction.

Another railroad is now being spoken of—the proposed route between Madison and Portage—about 38 or 40 miles in length. Or if the Milwaukee and St. Paul road were willing to permit their track to be used a portion of the way, and so let it start from Wyocena and strike the road three miles from Madison, there would be a great saving, only 27 miles of even track being necessary, to be laid, on an air line. This 27 miles could doubtless be built for about six hundred thousand dollars.

European and North American Railway.

One of the most interesting railway projects in America is that by which Halifax will be connected with the railway system of the American continent. Those who desire speedily to reach the point to which their travel is directed between America and Europe, and those who desire to shorten to the utmost the sea voyage, will rejoice in the completion of a railway by which Halifax can be made the American port of arrival and departure. This is the work undertaken by the European and North American Railway, by which St. John in New Brunswick is to be brought into direct communication with Bangor in Maine, whence any town in the United States on a line of rail or on a navigable river can be reached by steam. The road from St. John westward is nearly completed to the boundary of the state of Maine, and will be open for traffic on the 1st July, together with the branch to Fredericton, the capital of New Brunswick. On the Maine side, to meet it from Bangor, 55 miles will be in working order on the 1st of June, and the remainder is under contract and will be completed as rapidly as possible. Already the line extending eastward from St. John to Halifax has been constructed, with the exception of some 40 miles in Nova Scotia now being made. Between St. John and Shediac, on the Gulf of St. Lawrence, a distance of 108 miles, the road is finished, and from a place called Monckton the trunk line will branch to the Nova Scotian boundary 31 miles, thence to Truro 69 miles, and on to Halifax 61 more. The whole distance between Halifax and Bangor is 458 miles, and from Halifax to the City of New York 940, which, at the average rate of thirty miles, will make the time under 32 hours. The distance by sea is 700 miles, which takes 70 hours at ten knots, making a saving of nearly 40 hours in time and of 700 miles in sea voyage. For the mails, and for passengers hurried by business, the opening of this line is of much importance. Whatever tends to shorten the time between San Francisco and Europe is of moment to England, for the mails from Eastern China, Japan, Australia, and New Zealand, as well as the quick passenger traffic, must seek this route. Maine has always regarded her territory as that through which Europe would have to pass to reach the Pacific. At any rate, with all the bits of railway that state has built for years, this object has steadily been kept in view. The Government engineer of New Brunswick has just reported on that portion of the European and North American line within that province. Mr. Boyd says:—"The work is very thoroughly done, and both materials and workmanship are, in all cases, of the best construction; all benders of more than forty feet span will have iron superstructures. The company are evincing every desire to build a first-class road." If their road be not first-class, considering the nature of the traffic, it will be worthless, for it must be constructed for a high rate of speed, being essentially a line for rapid transit. The company calculate on diverting half the first-class passengers from New York, and whatever tends to shorten materially the sea voyage will in that proportion increase the number of passengers, especially from Europe, and America will be better known when the sea passage is reduced one-fourth. We will watch the progress of this road with interest, as it is in the truest sense an Anglo-American line.—*Canadian News.*

☞ Proposals will be received at the engineer's office of the Dutchess and Columbia Railroad, at Millerton, on the Harlem Railroad, until Monday, May 10th, for the graduation and masonry of fifteen miles, heavy work, between Pine Plains and Millerton. Profiles may be seen at the engineer's office, Millerton. Payments monthly in cash.

RAILROAD SHARE LIST, including Mileage, Rolling Stock, Debts, Income, Dividends, &c., &c.

An *asterick* (*) occurring in the column headed "Rolling Stock" signifies that the cost thereof is included, in that headed "Railroad." A *dash* (—) across the column signifies "nil," and running *dots* (.....) signify "not ascertained." Land Grant Railroads are printed in "*Italics*." State-aid Railroads are distinguished by a "¶."

American Railroad Journal.

Saturday, May 8, 1869.

Stock Exchange and Money Market.

Money worked in favor of borrowers, during the early part of the week, influenced by the rapid accumulation of funds at this point, as reflected by the unexpectedly favorable bank statement of Saturday, which showed an increase of nearly seven millions in the deposit line, nearly three millions in the legal tender reserve, and half a million in the specie board. Call loans were quoted easy at 6@7, choice to good discounts at 7@10 per cent. per annum. At these figures, the demand was not urgent. Monday and Tuesday's negotiations, however, showed a much brisker market at firmer rates, particularly for loans on stock collaterals. The street rates ranged from 7 per cent. currency to 7 per cent. gold. On Wednesday, the inquiry was active at these figures, chiefly for use at the Stock and Gold Boards. The available supply was less extensive, particularly through manipulations of the proceeds of recent extensive realizations on Government securities, stocks, and specie. Toward the close, there was some diminution of the pressure for aid, and the extreme rates were not easily obtained. The U. S. Sub-Treasury closed the month of April with a cash reserve of $83,754,775. The Treasury Department begun the current month of May with a cash balance of $116,235,497, including $108,338,933 of coin, and $7,896,564 of currency. Of the coin balance, $16,307,200 represented deposits on private account. The city bank exchanges on Wednesday were $147,809,765, and the resulting clearances, $4,367,170.

The specie reserve of the city banks is now $9,267,635, against $16,166,873 same time last year. The city bank deposits are now $183,948,565, against $191 206,135 week ending May 2, 1868 The legal tender reserve amounts to $56,495,722, against $57,863,599 same time last year. The circulation now stands at $33,972,058, against $34,114,843 same time last year. The loans are now $260,435,160, against $257,628,672 at this date last year. The Bank Exchanges at the Clearing House through the past week, averaged $127,294,725 a day, against a daily average of $125,484,300 the preceding week, and $128,727,550 the week ending with April 14, 1869. The current week's exchanges average about $151,000,000 a day. The city banks, last week, reported a gain of $417,275 of specie, $6,608,485 of deposits, and of $2,817,824 of legal tender notes. They increased their loans, $2,977,086; and reduced their circulation, $88 523.

National Bank notes to the amount of $241,545 were issued last week by the Treasury Department, making the total issue to 1,685 banks thus far, amount to $314,501,721, against $282,555,440 at the close of the fiscal year ending June 30, 1866. From the total issue is to be deducted the currency returned, including worn out notes, amounting to $14,631,961, leaving, with the existing 1,626 banks, (having an aggregate capital of $418,858,931,) an actual circulation at this date, of $299,869,760. The United States bonds held by Treasurer Spinner in trust for National Banks as security for circulating notes amount to $342,736,800; and for the public deposits, $30,255,350—making a total of $372,992,150. The Treasury Department last week redeemed and destroyed $438,900 of worn and mutilated fractional currency, and issued $320,183 of new. The outstanding amount of fractional currency on the 1st of May, was $35,330,323, against $36,719,912 on the 1st of April, $36,781,548 on March 1, $35,511,127 on February 1, and $34,215,716 on the 1st of January.

The U. S. Sub-Treasury receipts, week ending with May 1, were $10,933,150, including $2,150,455 from customs duties; payments, $17,063,686, including $3,230,768 of coin interest; balance at the close of the week, $81,985,389, against $88,655,876, at the close of the preceding week, showing a decrease of $6,670,486. The business of the Office during the first two business days of the current week, was as follows: On Monday, receipts, $2,188,900, including $441,000 from customs; payments, $3,578,320, including $1,628,257 of coin interest. On Tuesday, receipts, $1,505,736, including $503,000 from customs and payments $995,058, including $496,229 of coin interest. The balance at the close of business on Tuesday stood at $81,056,651, against $87,215,358 a week previous; and $88,631,886 on April 21, 1869. The aggregate receipts of the office in April were $32,771,148, including $10,936,268 from customs,

aggregate payments, $36,711,819, including $4,655,460 of coin interest.

The outstanding amount of coin certificates on the 1st of May, was $16,307,200, against $21,672,500, April 1, $28,775,560, March 1; $32,659,520 on Feb. 1, and $27,036,020 on the 1st of Jan., 1869. The Sub-Treasurer at this port issued, last week, coin certificates to the amount of $989,000, and retired $2,054,455 through the receipts for customs. The coin certificates issued by the Sub-Treasury office, during April, reached $1,625,580

Government revenues have been on a moderate scale, since our last. The customs at this port in April yielded $10,936,268, against $10,249,419 in April, 1868. The excises, last week, yielded about 3½ millions; customs at the port of New York, $2,150,455 and at the outports about $700,000 (in coin) more, making the grand total income for the week equal to about $7,348,125 in currency. The total receipts of the National Treasury, from excises, during the fiscal year ending with June 30, 1868, were $191,180,564. The receipts from the same source, thus far in the current fiscal year, commencing with July 1, 1868, have been about 125½ millions, according to the latest Washington advices.

Gold has been in more active speculative request and quoted decidedly higher, since our last, the extremes having been 133⅝@136¼, and the closing figures on Wednesday 135⅝. The less satisfactory position of the *Alabama* and other negotiations with Great Britain has tended to stimulate operations for a rise. The customs demand has been moderate. There has been rather more of an export inquiry. The imports of foreign specie have been moderate. On Wednesday, £2,000 in specie were received from Liverpool, and 680,000 francs by the *Cambria* from the Continent. The coin balance of the Treasury Department on the 1st inst., was $108,338,933, against $104,203,365 on the 1st of April.

On Wednesday, the U. S. Sub-Treasury disbursed $1,216,942 of coin interest.

The Gold Exchange Bank clearances on Wednesday, were $111,858,000, and the resulting balances $2,911,030 in coin, and $4,057,584 in currency.

The average amounts of the Gold Exchange Bank loans and discounts last week was $1,189,982, average amount of specie $540,459, average amount of deposits $1,057,478.

The customs demand for Gold last week, averaged $358,409 a day; thus far, this week, it has averaged $472,000 a day, or equal to a weekly aggregate of $2,832,000. The arrivals of specie from Europe, Havana and other foreign ports, during the week were $569,289, and since Jan. 1, $8,314,442, against $2,642,438 same time in 1868. The receipts from California, last week, were $690,948. The total customs revenue of the Government, in coin, at this port, from July 1, 1868, to date was $106,197,350, against $95,977,621 same time in the preceding fiscal year. At San Francisco, from Jan. 1, to Mar., 30th 1869, $1,543,675, against $1,728,595 same time last year.

The total receipts of California gold at this port, since July 1, 1868, have been $18,021,877, against $28,539,228 same time in fiscal year 1867–'68, showing a decrease in the current fiscal year, of $10,517,851. The exports of specie, from this port, last week, were $569,289, against $1,431,891 same week last year; total, since July 1, 1868, $32,691,854, against $49,377,387 in 1867–'68. Government disbursed last week through the U. S. Sub-Treasury here, on account of the coin interest on the public debt $3,230,768; since July 1, 1868, $74,633,286, against $61,684,261 same time in 1867–'68. The specie exports from San Francisco, from Jan. 1, to April 19, 1869, were $12,264,551, against $11,196,370 same time in 1868.

Foreign Exchange has been quoted stronger in price, on a lighter offering, and a moderate inquiry. Bankers' prime sixty day bills on London closed on Wednesday at 109@109¼, and on Paris to 5.17½@5.16¼; sight bills on London to 109⅝@109⅞, and on Paris to 5.15c.@5.13¾. The offering of produce bills has been less extensive this week. The week's exports of domestic produce and miscellaneous goods from this port have been to the currency value of $2,809,834, against $3,188,021 same week last year; total, since July 1, 1868, $138,303,008, against $153,968,634 same time in preceding fiscal year of 1867–'68.

Government securities have been in less request, since our last, but, under very moderate offerings, prices have not yielned materially. The last public debt statement to May 1, proved unexpectedly favorable, showing a reduction of fully $13,586,660 in the National obligations, properly so-called, or exclusive of the loans to the several Pacific R.R. Companies, the aggregate of which stood at $56,852,000, or precisely the same as on the 1st of April. The coin bearing portion of the public debt on the 1st inst., was $2,107,878,700, and the currency bearing debt $67,240,000. The debt free of interest was $413,422,682. The net aggregate of the debt, less the cash in the Treasury, was $2,472,305,885. against $2,485,892,545 on the 1st of April. When the Public Debt of the United States reached its maximum after the close of the war, the amount stood, as compared with the present statement:

	Aug. 31, 1865.	April 30, 1869.
War obligations	$2,710,994,571	$2,445,283,885
Old stocks	45,437,000	27,022,000
Total direct debt	$2,756,431,571	$2'472,305,885
Bonds Pacific R. R.	1,258,000	56,852,000
Total all debt	$2,757,689,571	$2,529,157,885
War debt reduced		$265,710,686
Old stocks paid off		18,415,000
Reduction of direct debt		$284,125,686
Increased aid to Pacific Railroads		55,594,000
Net reduction of all debt,		$228,531,686

Interest account stands as follows:

Accumulated to April 1	$39,303,916
Accumulated in April	10,894,386
Total to May 1	$49,698,302
Less May interest, prepaid in April	3,206,796
Interest accumulated	$46,491,506
Against April 1	39,303,916
Net accumulation of interest	$7,187,590
Net decrease of principal	13,586,660
Decrease of principal less interest	$6,399,070

The latest dealings show more firmness in the market for the more active issues of the Public Funds.

U. S. sixes of 1881 closed here on Wednesday at 118⅞@119¼; U. S. Five-twenties of 1862, ex-coupon, 118⅛@118¾; U.S. Five-twenties of 1864 at 113⅞@114; U. S. Five-twenties of 1865 at 115¼@115⅝; U. S. Five-twenties of 1865, consolidated, 116⅝@116¾; U. S. Five-twenties of 1867, 116⅝@116¾; U. S. Five-twenties of 1868, 116⅛@116¾; U. S. Ten-forties at 108⅜@108½; U. S. Six per cent. currency bonds, 106½@106¾.

The latest quotations at the London Stock Exchange compare as follows with former returns:

	April 21.	April 28.	May 5.

Atl. and Gt. Western.	....	24	24½

* Ex May Coupon.

Railway and miscellaneous stocks have been quite active, nearly all the week, opening at advancing prices, but closing heavily and irregularly under a pressure to realize on speculative account.

General business has shown more animation and buoyancy in the principal kinds of domestic produce, particularly Cotton, Breadstuffs, and Provisions, Petroleum and Naval Stores, though the latest transactions were on a less confident basis. Middling upland cotton closed heavily on Wednesday at 28¾ cts. per lb. The stock of cotton now here is estimated at about 99,000 bales. The receipts at the port this week, have averaged about 1,300 bales a day. The receipts at all the ports, since Sept. 1, 1868, have been 2,029,000 bales, against 2,057,000 bales same time in 1867–'8; exports, same time 1,186,000 bales, against 1,481,000 bales same time in 1867–'8; stock on hand at latest dates, 305,000 bales, against 232,500 bales same date 1868. Total crops of 1867–'8, 2,430,893 bales; total receipts at ports year ending Sept. 1, 1868, 2,240,282 bales; total exports thence, same time, 1,657,015 bales. The exports of domestic cotton goods from this port, since Jan. 1, have been 8,812 pkgs., against 8,742 pkgs., same time last year. From Boston, 3,525 pkgs., against 4,602 pkgs. same time in 1868. At the Live Stock markets, this week, Beeves have been less plenty and in fair demand at a shade firmer prices, ranging from 10½@16½c., per lb.; week's receipts, 5,949. Milch cows, in fair request at $40@$110 each, receipts, 89. Veal calves, abundant and slow of sale at from 5@10½c. per lb.; receipts, 1,908. Sheep and lambs have been in quite moderate demand and depressed in price, at from 5@8c., per lb.,; receipts, 21577. Swine, plenty and and heavy at 9¾@10¼c. per lb., all live weight receipts, 24,233.

Foreign merchandise has been generally quiet, though without notable fluctuations in prices. The total imports of foreign dry goods, last week, were $1,880,467, and the total amount marketed $1,926,919. The value of foreign merchandise imported last week, was $7,823,485—making the grand total specie value of last week's imports of dry goods and merchandise, equal to $9,703,952, against $5,395,815 same week last year; total since July 1, 1868, $238,595,644, against $201,055,836 in 1867–'8. The ocean freight market has been dull and heavy. For Liverpool we quote flour at 9d. by sail, and 9d. 1s. by steamer, per bbl.; grain at 1d. by sail, and 1⅛d.@2d. by steamer, per bushel; cotton at ⅛d. by sail, and $\frac{5}{32}$@$\frac{3}{16}$d. by steamer, per lb.; and heavy

goods 5s.@20s. by sail, and 7s. 6d.@25s. by steamer, per ton. Total number of vessels in port on Wednesday, 583.

The New York exports, exclusive of specie, for the week ending May 4, and since the beginning of the year, compare as follows:

	1868.	1869.
For the week	$3,188,021	$2,809,834
Prev. reported	58,489,905	52,761,008
Since January 1	$61,677,926	$55,570,842

The imports for the week ending May 1, and since the beginning of the year, have been as follows:

	1868.	1869.
Dry goods	$1,143,940	$1,880,467
Gen. merchandise	4,251,875	7,823,485
Total for the week	$5,395,815	$9,703,952
Previously reported	76,067,682	98,793,574
Since January 1	$81,463,497	$108,497,526

The balance in the Sub-Treasury on Wednesday was $80,849,953 31.

☞ It is proposed to build an Iron Bridge on the Wisconsin Division of the Chicago and Northwestern Railway, over the Fox river at Oshkosh.

☞ At the recent meeting of the Directors of the Chesapeake and Ohio Railroad, at Richmond, called to consider a proposition from certain wealthy capitalists to furnish $12,000,000 in money, at six per cent. interest in gold, to build and equip the above road, provided they are allowed to buy the State's interest and have control of the entire road when finished, a resolution was passed to accept the proposition.

☞ The Terre Haute, Attica and Chicago Railroad Company has been organized. The *Lafayette Journal* gives the route as follows: Through Rockville, Parke county, (already completed so far) through Covington or Chambersburg, Attica, Oxford, in Benton county, striking the Toledo, Peoria and Warsaw Railroad somewhere on through Newton county, Crown Point, Lake county, and thence to Chicago.

☞ The Commissioners appointed by the President to examine the completed sections of the Union Pacific Railroad are: General Cyrus B. Comstock, United States engineers; General Joseph F. Boyd, of Kentucky; Samuel M. Fenton, of Pennsylvania; General Hiram Walbridge, of New York, and Edward F. Winslow, of Iowa. All these gentlemen have notified the President of their acceptance of the appointment.

☞ The drawings and plans for the bridges over the Schuylkill River, at Fairmount and at South street, Philadelphia, have been completed, and proposals for building the bridges will be issued as soon as the necessary appropriation is made. The two bridges will cost about $1,500,000.

☞ Work has begun on the north end of the Chicago, Danville and Vincennes Railroad, Indiana. Men are engaged in grading at several places, and work will be prosecuted more actively as the season advances. A new survey from Wastega southward, is now being made.

☞ Mr. Charles E. Smith has resigned the Presidency of the Philadelphia and Reading Railroad Company, and Mr. Franklin H. Gowan, has been elected to fill the vacancy.

☞ Ground was broken on the Suncook Valley Railroad at Pittsfield, N. H., on the 26th ult., Gen. Natt. Head is contractor, and Hon. J. A. Weston Engineer of the road."

☞ The Pacific Railroads are to be joined on Saturday, May 8th, by a solid silver rail and gold spike, which are to be driven into place by Governor Leland Sanford.

☞ The receipts of the Pennsylvania Canal Company, which now includes the West Branch and Susquehanna Canal and the Wyoming Valley Canals, aggregate to April 30th, $47,900 79.

☞ The Whitehall and Plattsburg Railroad is now completed and in operation from Plattsburg to Ausable river Station, (near Ausable Forks,) a distance of twenty miles.

☞ The further survey of the Salt Lake and Columbia River Railroad has been abandoned for the present, and the surveyor has been recalled.

☞ The officers of the Springfield, Mass., and Farmington Valley, Conn., Railroad Company are: President, A. D. Briggs; Clerk, J. L. Powers; Treasurer, H. Alexander, Jr.

Journal of Railroad Law.

RAILROAD—LIABILITY AS CARRIERS FOR INJURIES TO CATTLE—RIGHT TO MAKE SPECIAL CONTRACT—CERTAIN ACTS OF OFFICERS NOT EVIDENCE OF AN ADMISSION OF NEGLIGENCE.

The recent action of Betts *vs.* The Farmers Loan and Trust Company (21 Wis., 80) was one for injuries to stock while being carried over the Racine and Mississippi Railroad, then operated by defendant. The complaint alleges that the injuries were caused by defendant's negligence in carrying the cattle in a car with defective and imperfectly fastened doors, which were thrown open by the motion of the car, so that the cattle escaped. The contract under which the cattle were shipped contained the following provisions: "The line will not assume any liability over one hundred dollars on horses and valuable live stock, except by special agreement. Agents are not allowed to receive and ship such valuable horse or other animal until a contract or release is signed by the owner or shipper thereof." (Date) "Received of G. Betts & Co., this day, three cars containing hogs and cattle, live, to be delivered at Milwaukee station at special rates. * * * In consideration of which, * * * it is hereby mutually agreed that said company shall not be liable for loss in jumping from the cars, delay of trains, or any damage said property may sustain, except such immediate damage to the animals as may result from a collision of the train, or where cars are thrown from the track in course of transportation. To be fed and taken care of by the owner." (Signed by the station agent and the plaintiffs.) One Taylor, for the plaintiffs, testified that he loaded the cattle for them at Springfield station, being then in their employ; that several days before they were shipped, he told Cary, the agent of the road, that he wanted grain cars and a stock car (the former for hogs of the plaintiffs, to be shipped at the same time, and the latter for cattle) Cary told him they would not give a stock car, but he could take the grain cars. He took for the cattle the largest grain car, no one pointing it out to him. He left the south door of the car open, but nailed bars across the doorway on the inside. He then put into that car twenty head of cattle and six hogs, by the north door. When he came to close the door, he discovered that the pin and chain to fasten it were gone. He then tried to fix that doorway as he had fixed the one on the south side, but could not do so to his satisfaction, because it was so dark he could not see to drive the nails, and the car was so full he could not get in. He therefore nailed up a strip "behind" the door, to keep it from sliding. When he left the car, he thought it was safe. It appears from the evidence that when the train arrived at Racine Junction, the north door above referred to was gone, and seven head of the cattle had escaped through that doorway, and received the injuries complained of. The strip nailed on by Taylor to hold the door was still there. No one was employed by plaintiff to accompany the cattle, and one of the plaintiffs testified that it was not customary for owners to send any one for that purpose. Mr. Cary, then the station agent at Springfield, testified that the plaintiffs and Mr. Taylor called on him for stock cars to ship said cattle, &c., several days before the shipment, and he telegraphed for them repeatedly to the assistant superintendent, but could not get any that he saw the grain car in question, after it was loaded with the cattle, and it "looked all right," that he saw that the north door was closed, but "did not see how it was fastened on the inside;" that on the following day he received a telegram from the assistant superintendent of the road as follows: "find the men who own cattle and hogs just sent in, and have them come in at once. Pass them, and tell them the cattle are part of them along the track. They jumped out: have them drive them in;" that the next day he received a letter from the assistant superintendent of the road, as follows: "Racine Nov. 26th, 1864. L Cary, Esq.: The bearer, F. Daggett, will relieve you as agent at Springfield. The loss of chest some time since, together with your allowing those stock cars to leave your station without the doors being properly fastened, is sufficient evidence of inattention to business on your part to render a change imperative. R. A. Knapp Ass't Supt." The telegram and letter were received in evidence against defendant's objection.

There was conflicting evidence as to whether the car was loaded with a larger number of animals than was customary or prudent; and also as to whether it would have been practicable, with a proper load, to have shut down the "inside grain door," on the north side of the car, and so to have rendered the cattle secure. The opinion of the court was delivered by

DIXON, C. J.—The judgment is erroneous and must be reversed.

1. The letter and telegram from Knapp, the assistant superintendent of the railroad, to Cary, the station agent at Springfield ought not to have been received in evidence. They were instructions from a superior to an inferior agent of the company, having some relation to the affairs in controversy but not admissions of a kind entitled to be given in evidence. Knapp, the assistant superintendent was a stranger to the facts in dispute; he took no part in the transaction, and knew nothing about it, and was consequently disqualified from making any admissions which would bind the company in respect to it.

2. The fourth instruction was erroneous. It appears that Taylor, the agent of the plaintiffs, who put the cattle into the cars, knew the weak and unsafe condition of the car door, and that he did not inform the station agent of the company, to whom it was unknown. Taylor fastened the door by such means as were at hand, and so that he considered it safe. If, after this, he had wished to hold the company responsible for any loss or damage which might arise from that cause, he should have notified the station agent of the unsafe condition of the door, so as to have given him an opportunity of securing it. The jury should have been so instructed.

3. The second and third instructions asked by the counsel for the company should have been given as asked. The limitation of the liability of the company relates exclusively to live stock shipped over its road. As to the species of property we think it competent for the carrier to contract that the owner shall assume all risk of damage or injury from whatsoever cause happening in the course of transportation. This is a new kind of carrying, and such as was almost wholly unknown before railroads came into use. It is attended with peculiar risks and responsibilities,

and it seems very reasonable that the carrier should be at liberty to contract as he pleases, without regard to the rules of the common law as formerly understood and applied in some of the cases. It is more than doubtful whether a common carrier by railroad can be compelled to receive such property at all for conveyance, unless by statute. On this account a distinction seems to be taken in several of the English cases between this and other kinds of property; and we think it well taken. Carr *vs.* The Lancashire and Yorkshire Railway Company 14 Eng. Law and Eq., 340; Chipendale *vs.* The same 7 id., 395; Wise *vs.* The Great Western Railway Company 36 id., 574. Austin *vs.* The Manchester &c. Railway Co., 11 id., 506. In saying that we think the distinction is well taken we mean no more than that it was competent for the company, by express contract, to limit its liability in all respects with reference to this kind of property. We intimate no opinion as to whether it is or is not competent for a common carrier to make similar stipulations with regard to other kinds of property or so as to protect himself against loss or damage arising from his own negligence, or the negligence or omissions of his agents or servants.

4. The fourth instruction asked by the counsel for the company was properly refused; because the limitation of the liability of the company to $100 except by special agreement, applies only to horses and stock of extraordinary value. The stock in question was not o that kind.

By the Court. Judgment reversed, and a new trial awarded.

Bessemer Steel.

It is understood that Mr. Bessemer has signified his willingness to reduce his royalties from £2 to 2s. 6d. per ton, except for steel rails, for which a rebate of 20s. per ton is already allowed. Ordinary Bessemer steel will thus be reduced nearly £2 per ton, and rails about £1 10s. This will remove all inducements which might otherwise exist to infringe the patent rights remaining to Mr. Bessemer after the expiration of his principal patents in the course of next year, and at the same time will give an impetus to the steel rail trade, by permitting the steel rails to be sold in the market at a price but little higher than that of iron. If the Heaton process should solve the question of converting *cheap* pig iron into steel, iron rails may, probably, be entirely displaced.—*London Mining Journal.*

☞ At a meeting of the grantees of the Franklin and Portland Railroad, at Sanbornton Bridge, N. H., on the 3d inst., the company was organized by the choice of the following Board of Directors: Stephen Kenrick, Nahum Wight, John McDuffee, Asa P. Cate, Chas. A. Hackett, Frederick Robie, of Gorham, Me.; Winthrop G. Ray, of New York. Stephen Kenrick was chosen President.

☞ A railroad route has been surveyed from Pittsfield, Mass., to Hartland and thence to St. Albans, Vt., about two miles beyond Hartland. The route is very level, and it is estimated the road could be built for $16,000 a mile. The Legislature has authorized the towns of Hartland and St. Albans to loan their credit for twenty per cent. of their valuation, in aid of the enterprise.

☞ The Pike County Railroad, which penetrates a very productive part of the State of Illinois, is being rapidly built.

Statement of the Public Debt, May 1, 1869.

Railroads of California.

During 1868, the following railroads have been completed, viz: Yuba Valley from Lincoln to Marysville, a distance of 24 miles; Napa Valley Railroad from Vallejo to Calistoga, a distance of 40 miles; California Pacific Railroad (branch) from Vallejo to Sacramento City, 62 miles, and Central Pacific from Sacramento to the State line, 138 miles. The following work has been done on Railroads now in course of construction: Southern Pacific Railroad which is graded from San Jose to Gilroy, a distance of 30 miles, of which 21 miles are laid with rails. San Pedro and Los Angelos Railroad, 21 miles, all graded, and 6 miles laid with rails; and San Francisco and Humboldt Railroad from Sancelito to Humboldt Bay, about 15 miles graded. The system of railroad and portion built are as follows, with total length and miles completed.

	Length.	Completed.
Central Pacific Railroad from Sacramento to Fort Bridger	900	480
Sacramento Valley Railroad from Sacramento to Folsom	22½	22½
California Central Railroad from Roseville to Lincoln	10	10
Yuba Valley Railroad from Lincoln to Marysville	24	24
California Northern Railroad from Marysville to Oroville	26	26
San Francisco and San Jose Railroad from San Francisco to San Jose	50	50
San Francisco and Alameda Railroad from Encinal to Vallejo Mills	26	14
Okland Railroad from Okland Point to Clinton	4	4
Napa Valley Railroad from Vallejo to Calistoga	40	40
California Pacific Railroad from Vallejo to Marysville with branch to Sacramento	100	62
California and Oregon Railroad from Marysville to Oregon (less road built to Oroville as above)	274	...
Southern Pacific Railroad from San Jose to Colorado River	600	21
Copperoplis Railroad from Copperoplis to Stockton	35	...
Headsburg Railroad from Vallejo to Headsburg	..	...
San Pedro and Los Angeles	21	6
San Francisco and Humboldt	210	...
Sacramento Valley and Placerville from Folsom to Placerville	37	26

Bankers' and Brokers' Taxes.

The Commissioner of Internal Revenue has decided in the matter of the appeal of Clark, Dodge & Co., from an assessment made by the Assessor of the Thirty-second district of New York:

First—That a person, firm or company having a place of business where credits are opened by the deposit or collection of money or currency subject to be paid or remitted upon draft, check or order, or where money is advanced or loaned on stocks, bonds, bullion, bills of exchange or promissory notes, must be regarded as a banker or bankers, under section seventy-nine of the act of June 30, 1864, as amended July 13, 1866, and as such are liable to a tax of one twenty-fourth of one per centum per month upon their capital employed in the business of banking beyond the average amount invested in United States bonds, and a like tax of one twenty-fourth of one per centum upon the average amount of deposits of money subject to payment by check or draft, or reptesented by certificates of deposits or otherwise, whether payable on demand or at some future day, under the 110th section of the said act of June 30, 1864, as amended; and that under his rule said Clark, Dodge & Co., are bankers, and are liable to said tax on their capital and deposits.

Second—That in ascertaining the amount of capital of such person, firm or company, all moneys used and employed in the business of banking, except deposits, should be regarded as capital and taxed as such; and it is immaterial whether this capital is furnished by the person or persons constituting the firm or company, or borrowed for the purpose of being used in the business of the bank, and, if borrowed, it is immaterial upon what length of time the loan is made. In large cities, where money is borrowed, short loans, frequently changed, furnish as certain and reliable capital for banking purposes as much longer loans in the country. In all such cases the average amount thus borrowed and employed in the business of banking should be ascertained and treated and taxed as capital.

Third—That in ascertaining the amounts of deposits there should be included as deposits the average per month of sums of money deposited with such person, firm or company, subject to payment by check or draft, or represented by certificates of deposits or otherwise, whether payable on demand or at some future day, for which such person, firm or company pay interest, as well as all like sums for which no interest is paid.

Fourth—That the same person, firm or company may be engaged in business as brokers and bankers, and in such case the payment of taxes as brokers does not release from the liability to pay taxes on capital and deposits employed in their business as bankers.

From the Oswego Advertiser and Times.

The Safety of Railway Travel.

We are indebted to James Barnes, Esq., Civil Engineer, and late Deputy State Engineer and Surveyor, for the following statements prepared from the annual reports of the State Engineer and Surveyor on the Railroads of New York, for the ten years from 1858 to 1867, both inclusive:

The showing of these figures will doubtless surprise many who are occasionally shocked by the accounts of accidents occurring on railroads, and the usually severe strictures upon the same which they see in the public prints, and from which they derive exaggerated ideas of the risks of railway travel.

It will be seen from the following that passengers upon our railroads are almost as perfectly secure from accidents as when in their own homes, beside their own firesides. No mode of travel ever invented by the ingenuity of man can compare with this for safety, and our railway managers should receive the highest praise for the care, vigilance and skill which they exercise in the transportation of vast crowds of people over their various lines, at rates of speed undreamed of at a period so recent as to be within the recollection of every man of middle age.

Railroad officials should, of course, be held to the strictest accountability for the safety of their passengers; but we should remember that no human sagacity, foresight or watchfulness can always guard against accidents, and that these men almost never receive any praise for the unceasing vigilance, and zealous, watchful care which has guarded our persons against accident, under circumstances in which anything short of the exercise of these qualities would render disaster certain.

The figures given below are derived from the annual reports of the several railroad companies to the State Engineer and Surveyor under the general railroad act of 1850, and are verified by the oaths of their respctive officers:

The total number of passengers carried in cars (on steam roads) during ten years, was 131,953,966.

Total mileage of passengers, or number of passengers carried one mile, 4,871,595,760.

Average number of miles traveled by each passenger, 37.1724.

Total number of passengers killed in ten years, 219; total number of passengers injured in ten years, 717—total killed or injured, 936.

The number killed is one in each, 598,420.

The number killed or injured is one in each, 140,015.

The number of miles traveled for each one killed, 33,596,159.

The number of miles traveled for each killed or injured, 7,666,616.

DEDUCTIONS FROM THE FOREGOING.

A passenger traveling day and night, at the rate of twenty-five miles an hour, would be killed in, 153 148-365 years.

The same would be killed or injured in 35 2-365 years, (in which the chances of being killed are 23 4-10 per cent.)

A passenger traveling from New York to Buffalo (distance say 442 miles) would be killed in making, 76.009 trips.

Or if he traveled the same distance once in each day, he would be killed in, 208 89-365 years.

The same would be either killed or injured in making, 17,345 trips.

Or traveling the same distance once in each day, he would be killed or injured in, 47 190-365 years.

It will be seen from the foregoing that a very small premium collected upon each mile traveled by passengers would produce a sum amply sufficient to provide for the relief of all who suffer from accidents by this mode of travel. This sum could be collected by the roads and paid into the State Treasury without a dollar of extra expense to be incurred by the roads, so that the entire sum would be available for legitimate purposes, nothing being wasted in expense of collecting and distributing, and there being no profits to shareholders to eat up its substance.

A premium of one-tenth of one cent. per mile of the total distance traveled as above, would give the large sum of $4,871,595 76:

Which would give to the representatives of each of the 219 killed, $10,000	$2,190,000
To one half the wounded, who might be seriously injured or maimed, 359 persons, each, $6,000	2,154,000
And to the remainder, or more slightly wounded, 358 persons, each, $1,473	527,334
Totsl	$4,871,334

Here would be a perpetual, safe and certain accident policy for all who travel by railways, at a lower rate than is possible by any other plan, and which would scarcely be felt or noticed by the traveling public. At the same time the railway companies would still be liable for the carelessness or negligence of their agents, as at present.

Our Country—Its Necessities.

In the emergencies, industrial and financial, now threatening us with the depression and calamities that usually follow expensive wars, we deem it our duty to enlarge the sphere of our JOURNAL, and to give greater attention to the plans and measures necessary to build up an industrial policy, founded on a broad system of national economies.

While our country, like other nationalities, has made great and successful efforts to extend the railway, its utilization has been carried to but six or seven-tenths of its capacity to aid the business of the country. This defect will find an easy remedy by adopting the simple economies now extensively approved in this Country and England—a mere reform in management, that must of necessity prove alike beneficial to railway property and the public.

Bad as our railway management has been, our monetary system is still worse. The evils of both are combined to increase the expenses of production and distribution, and to overthrow every sound principle of Public or Political Economy. We have nearly gone the length of our tether on false principles. We must change our course, or

it will be changed for us under that inexorable law of compensation that ultimately overturns all delusive calculations based on the idea of the permanent potency of wrong.

It is immaterial how our system of false political economy grew up; whether under state or national legislation, or in part under both: nor is it material whether it originated in ignorance, or the designs of the mercenary, in fraud, or honest error in legislation, its effects on producing capital connected with producing labor is all the same. The defects that exist in our railway and monetary establishments are the results of unguarded legislation. They had their origin in the enactment of laws predicated on the theory of promoting the public good. By necessary implication, all such laws are repealable, or subject to modification, when the public welfare demands it. There can be no such thing as vested rights where the legislation that assumed to create them was either fraudulent or erroneous, or where the abuse of the franchise makes a repeal necessary.

All the industrial interests of the United States, Agriculture, Mining, manufacturing, the mechanical industries, trade and commerce demand the full utilization of the railway whereby it shall be made to perform its full office as an aid to production and the development of our resources. Our monetary system must be reorganized and reformed the same as the railway, and on the same principles of being brought to the aid of production. In case this cannot be accomplished, our Banks will remain worthless—worse than useless—a mere public nuisance that should be abated. Railways and Banks may be made profitable to the public in just so far as they are made to aid or assist production, and in so far as they fail in this they are useless. It is time that both were brought to such accountability and reform as comports with the interests of the commonwealth.

The damages of our late civil war will not very likely be repaired through the organization of Party, or the spirit that is engendered by it. It will require the higher vocation of ststesmanship, such as connects itself with plans for the development of our resources, makes new creations of property, and increases the ability of the people to thrive, somewhat, under their burdens. We invite the patronage of all classes who desire to bring the governments, state and national, to the aid of the producing industries. In case we can sustain and strengthen these it will be well—if not, we shall continue to drift, we know not where!

☞ The Lynchburg papers state that the May interest on the Orange and Alexandria 8 per cent. bonds and on the bonds of the James River and Kanawha Canal Company, will be paid at the banking-house of P. A. Krise, in that city.

☞ The track on the Iowa Division of the Chicago and Northwestern Railway is being relaid with new rails of the American fish-plate pattern. From State Center to Marshalltown, a distance of fourteen miles, the new rails are already laid.

THE ALBANY AND SUSQUEHANNA RAILROAD COMPANY.—TREASURER'S OFFICE, ALBANY, April 30, 1869.—The interest due upon the first and sixth days of May, 1869, on the Albany City Bonds issued to this Company, will be paid on and after said dates at the Banking House of Messrs. Dabney, Morgan & Co., No. 53 Exchange Place, in the city of New York.
1t19 W. L. M. PHELPS, Treasurer.

To Railway Contractors.

THE Graduation and Masonry of the FREDERICK AND PENNSYLVANIA LINE RAILWAY, embracing twenty-eight sections of more than one mile each, are advertised for contract, and PROPOSALS for the same will be received at the Company's office in the city of Frederick, Md., up to the 25TH DAY OF MAY, inclusive. Specifications, plans and profiles of the work will be ready for inspection at the office of the Company in Frederick, and at the office of the Western Maryland Railroad, in Baltimore, from the 15th day of May, where contractors will obtain all necessary information to enable them to examine the line. The Company reserves the right to reject all or a part of each bid.
4t18 JOHN LOATS, President.

Notice to Builders, Plumbers, Roofers, &c.

SEALED PROPOSALS WILL BE RECEIVED BY the undersigned, at the city of Albany, until the 11th day of May next, for the construction of a Union Passenger House, in the city of Binghamton, for the Erie, the Albany and Susquehanna, and the Syracuse, Binghamton and New York Railroad Companies.

The structure will be of brick, located about 200 feet east of Chenango street, on the north side of the Erie track, having a front on Chenango street of 100 feet by 54 feet, and two-stories high, with French roof, and a wing fronting on the Erie track, 100 feet by 30 feet, one story high.

The plans and specifications of the manner of construction may be examined at the Office of the Chief Engineer of the Albany and Susquehanna Railroad, in the city of Albany, and at the Resident Engineer's Office, in the city of Binghamton, on and after the 3d prox.

Proposals will be received in gross for the whole work embraced in the specifications, or for either or all of the following items, separately: Masonry, to include the Foundations, Brick Work, Plastering and Iron Work; the Carpenter and Joiner Work; the Gas Fitting and Plumbing, with the Steam Heating Apparatus, exclusive of Boiler; the Slating and Tinning, and the Painting and Glazing.

Proposals should be endorsed "Proposals for Passenger House," and addressed to the undersigned at Albany.

The right is reserved to reject any or all the proposals, as may be deemed for the interests of the companies.

C. W. WENTZ,
Chief Engineer A. and S. R. R.
ALBANY, April 27, 1869.

Blue Ridge Railroad.

THE attention of Contractors is invited to the work of completing the Blue Ridge Railroad, in South Carolina, from Anderson, South Carolina, to Knoxville, Tennessee—a distance of one hundred and fifty-two miles to build.

The Executive Committee of the Board of Directors is prepared to enter into negotiations with responsible persons, who may desire to undertake the work.

Payments will be made in first mortgage (7) per cent. currency bonds of the company, secured by the guarantee of the State of South Carolina, for the punctual payment of both principal and interest. The mortgage covers unencumbered property of the company, which cost three and a quarter millions of dollars in gold, and embraces fifty miles of road complete and in running order.

Detailed Estimates, Plans, Profiles and Specifications, will be ready for inspection by JUNE 1, 1869. Meanwhile, approximate quantities and other information concerning the work may be obtained by application to Col. James P. Low, the Chief Engineer of the Company, or to the undersigned, at Columbia, South Carolina.

R. K. SCOTT,
5t18 Chairman of Executive Committee.

OFFICE OF THE ILLINOIS CENTRAL RAILROAD COMPANY, NEW-YORK, April 28, 1869.

THE ANNUAL MEETING OF THE SHAREholders of the Illinois Central Railroad Company, for the election of directors and the transaction of other business, will be held at the office of the Company, in the City of Chicago, on WEDENSDAY, the 26th day of May, proximo, at 3 o'clock P. M.

The transfer books of the Company will be closed at the close of business on the 15th proximo, and re-opened on the 1st day of June, following.

L. A. CATLIN, Secretary.

PRATT'S
PATENT COMPENSATING FISH-JOINT,

MADE BY

VERREE & MITCHELL,

IRON AND STEEL MANUFACTURERS,

No. 939 North Delaware Avenue, Philadelphia, Penn.

COMBINES MORE ADVANTAGES THAN ANY FISH-JOINT HERETOFORE INTRODUCED.

This Joint is made of two heavy bars of wrought iron, or cast steel, sixteen inches in length, or any other desired length, fitted to the side of the rail and secured by four three-quarter inch bolts, with four malleable cast-iron cups and washers, and a gum ring two inches in diameter and half an inch thick, in each cup.

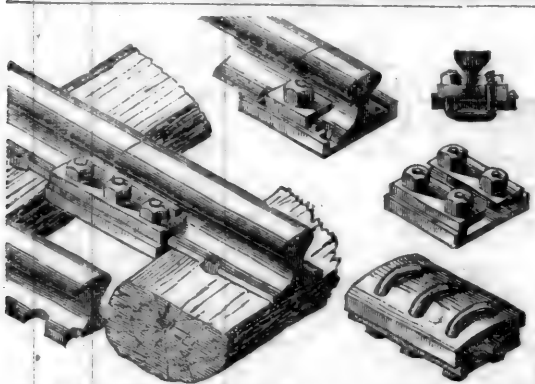
The value of gum to absorb jarring motion is well known; but when the pressure is as great as that required to secure the ends of railroad rails, some device, or method by which to prevent the gum from being forced out from under the washer, when subjected to increased pressure, is indispensable. The PATENT COMPENSATING FISH-JOINT secures that effect and enables Railroad Managers to apply all the force and pressure desired.

Where this Joint is securely fastened by screwing the nut upon the washer and gum in the cups with a lever three feet in length, it makes a perfectly tight joint, and thus secures what Railroad Managers have long desired—*a continuous rail*, with sufficient elasticity in the gum to relieve from and compensate for the sudden jar and at the same time allow for expansion and contraction by heat or cold.

We confidently claim for the PATENT COMPENSATING FISH-JOINT:

That it makes the best and cheapest form of fastening, requiring no plate or chair underneath the foot of the rail.

That it is safe and secure, and prevents the numerous accidents resulting from loose or broken rails.



That this Joint absorbs the vibratory shock given by the wheels in passing over the ends of rails, and thereby preventing fracture; and we have yet to hear of the first rail having been broken with our Joint on it.

That it can be applied in repairing and relaying with the least trouble and delay.

That the materials are indestructible, and make A PERFECT AND CONTINUOUS RAIL, thus securing what has long been desired, and what all previous experiments have failed to attain.

The Manufacturers can supply these Joints, complete in all their parts, ready to be fastened to the rails with dispatch.

Refer to all the Leading Railroads in the Country.

FISHER'S PATENT
Wrought Iron
RAIL JOINTS,
MADE BY
FISHER & NORRIS,
TRENTON, N. J.

The Superiority of these Joints has been proved by eight years' use on different Roads.

Our True Railway Policy.

However desirable it may be to construct railways through desert and uninhabited regions with a view to future development, our immediate necessity for increase of production in the seats of population compels us to question such policy. The welfare of the country requires immediate aid to our producing population. We cannot err in believing that the utilization of the railways we now have should be a subject of absorbing interest. Immediate relief is what is now required.

We are certain that the adoption of the "equal speed"—"equal rights," plan for a cheap-freight railway, if adopted on a few of the thoroughfares leading from the interior to the sea-board, would so invigorate our whole system as to treble the amount of equipments, now employed, about as soon as they could be made. It is said by some who have never given the subject consideration that "the present roads as now managed, can carry all the freights that are offered." Our reply is, that if the present cost of freights were doubled one-half the rolling stock now used would be idle:—on the other hand, were freights lessened one-half, more than treble the present amount of rolling stock would be required. "But" says another, "where are all those freights to ——?" We reply: The agricultural fertili- —— of the states could afford —— their agricultural products. The coal and minerals transported by rail in the United States last year amounted to about 21,000,000 tons as against 94,000,000 tons transported on the British railways. We have lumber in almost illimitable quantities in some States and little to speak of in others. Had we a cheap-freight railway from Western Vermont to New York the tonnage freight on marble and slate would exceed by 20 fold the freights on the agricultural products of the State. It has often been said that the minerals from a single county in Pennsylvania could be made to produce more freights for railway transport than the whole of the agricultural products of Michigan. To properly develope the resources of Pennsylvania, Virginia, or Missouri would require more freight stock than is now running on all the roads in the United States. Adopt the cheap-freight scheme and we need not inquire where the freights would come from, but on the contrary we would like to find the man who could tell us where they would *not* come from.

Men often become inflated in the abstract in the contemplation of our great country, its stupendous resources, and the 38,000,000 of people to develope and manipulate them. These resources were never overstated. The half, even, has never been told. But they are remaining mostly in the state where nature placed them. Millions and tens of millions of square miles are overlaid and underlaid with valuable property, but by reason of meagerness in development they remain about as valueless to the business of the country as blue—sky, acre for acre.

To any one who has studied the subject of cheap-freights and traced the results in all collateral directions on the increase of production and wealth our views will appear simple and truthful. We hazard nothing in expressing the belief that the value of rolling stock and railway equipments will constitute at no distant day more than half the value of railway property. *Cheap freights* will be made one of the mainsprings to American production and wealth, and *cheap money* the other. The two combined would work greater, more immediate, and more permanently beneficial results than would the importation of ten millions of the best laborers of Europe.

Pittsburg, Ft. Wayne & Chicago Railway.

The following is a statement of the approximate earnings and expenses of this company during the month of April, as compared with the same period of the year 1868:

	1869.	1868.
From freight	$483,502 76	$524,443 71
" passengers	220,109 76	219,297 21
" express matter	10,257 00	10,257 00
" mail	7,825 00	7,825 00
" rent of railway	7,083 33	7,083 33
" miscellaneous	1,000 00	1,291 85
Total	$729,777 85	$770,198 10
Expenses	391,346 38	414,405 40
Net earnings	$338,431 47	$355,792 70

This shows a decrease in earnings of $40,420 25; with a decrease in expenses of $23,059 02—making the decrease in net earnings, $17,361 23.

The earnings and expenses, from January 1 to April 30, compare as follows:

	1869.	1868.
Earnings	$2,687,000 65	$2,569,336 60
Expenses	1,641,093 47	1,600,490 77
Net earnings	$1,045,907 18	$968,845 83

This shows an increase in earnings of $117,664 05; with an increase in expenses of $40,602 70—making the increase in net earnings, $77,061 35.

Hon. Lorenzo Sherwood.

Though altogether unused to the mournful task, it is eminently proper, in recording the death of this distingnished gentleman, which occurred on the 12th inst., that we should pay some fitting tribute to the worth and services of the departed. The cause of railroad extension and improvement had no votary more sagacious or energetic. His contributions to the columns of this paper, and his memorials to Congress on railroad topics, were always read by intelligent men with more than ordinary avidity. At the time of his death, Mr. Sherwood was President of the "National Cheap Freight Railway League," for promoting the desired improvements in railway organization and management—the publications of which League, with his memorials to Congress on "Railway Policy" in its broadest and highest character, are alone sufficient to form an enduring monument to his sagacious views and energetic efforts in this great branch of the public interests

Vicksburg and Meridian Railroad.

At an annual meeting of the stockholders of this company, in Vicksburg, on the 3d of May, the annual report of the President was received, and the following board of managers elected for the ensuing year: M. Emanuel, T. Rigby, A. B. Reading, Wm. Crutcher, D. W. Flowerre, T. M. Smedes, J. R. McDowell, William E. Morris, Peter Anderson, T. S. Dabney, Adelbert Ames.

At a meeting of the new board of managers, the following officers were elected: M. Emanuel, President; Thos. Rigby, Vice President; N. G. Bryson, Secretary and Treasurer; E. F. Raworth, General Superintendent.

☞ The rates of fare agreed upon by the officers of the Union and Central Pacific Railroads are as follows: from New York to San Francisco for first class passengers, $175; and for second class passengers, $75. It is expected that the trip can be made in from six to seven days. Each company has over 2,000 freight cars. The Union Pacific has about 150 locomotives; the Central, 190.

☞ The semi-annual interest due last January on the Norfolk City registered bonds, and the semi-annual interest on the Norfolk City coupon bonds, due last October, is being paid at the Register's office in that city. Payment was authorized on the 6th instant, and the bonds, which were selling at 59 two days previous, are now up to 75.

☞ The Evansville, Ind., *Journal* says the railroad from Chicago to Danville, Illinois, is already under contract, and it is thought it will be completed by the end of this or early next year. Arrangements are being made by the Evansville and Crawfordsville road to meet the Chicago and Danville road at the State line, by the time the latter reaches that point.

☞ In a few days contracts will be awarded for the remaining sections of the Pittsburg and Connellsville Railroad. Meanwhile the track is being steadily pushed upon the portion put under contract last fall.

☞ Sections 5, 6 and 7 of the Intercolonial Railway have been awarded by the Commissioners to Edward Haycock, of Ottawa, at $13,907 per mile, Jacques Jobin, of Levis, Quebec, at $11,500 per mile, and H. J. Sutton & Co., of Paris, at $17,243 per mile, respectively.

☞ The people of Plattsville, Wisconsin, have voted in favor of giving $60,000 in town bonds in aid of the Dubuque, Platteville and Milwaukee Railroad.

☞ The new Albany Bridge bill has passed both branches of the New York Legislature. The construction of the bridge will at once be proceeded with.

☞ The town of Middletown has voted by a large majority to loan $100,000 in addition to $240,000 previously voted in aid of the air line railroad.

☞ The survey of the route of the Yazoo Valley Railroad, from Batesville to Charleston has been completed.

☞ The survey of the Decatur and East St. Louis Railroad has been finished. As located, the distance is about 107 miles.

Pittsburg, Fort Wayne and Chicago Railway.

The earnings and expenses of this road for the years ending December 31, 1865, 1866, 1867 and 1868, were as follows:

Earnings:	1865.	1866.	1867.	1868.
From freight	$4,789,067 88	$4,707,682 12	$4,483,616 42	$5,231,857 73

" rents, etc.	10,431 60	7,414 81
Totals	$892,056 87	$1,015,394 29
Expenses, viz.:		
Maintenance of way	$127,186 35	$160,606 95
Motive power	144,382 68	155,081 25
Maintenance of cars	63,240 75	74,892 82
Conducting transp	152,199 93	157,566 10
General expenses	27,831 13	29,315 76
	$514,840 84	$577,462 88
Net earnings	$377,216 03	$537,931 41
Interest, taxes, etc	226,759 27	255,138 71
Balance	$150,456 76	$182,792 70

Compared with the previous year, the gross earnings of 1868 show an increse of $123,337 42; with an increase in expenses of $62,622 04—making the increase in net earnings, $60,715 38.

There has been expended within the year on permanent account: for construction, $103,847 70; and for equipment, $76,015 55—total, $179,863 25. The report says:

The policy adopted of spending the net profits of the company for construction and equipment, and making scrip dividends convertible into bonds, has been adhered to, and has given very general satisfaction to the stockholders.

Grading and ballasting for double track between Berks street passenger depot and Old York road, were commenced early in the summer; the rails have been laid and the work completed a large portion of the way; the double track will be extended to Abington as fast as circumstances will admit, and when completed to that point, increased accommodation can be extended to the local travel, and the through trains can be run with greater regularity.

In accordance with the provisions of the mortgage, securing the six per cent. bonds of the company, requiring twenty-five thousand dollars of said bonds to be set aside annually as a sinking fund, the full amount required to this date, say two hundred and twenty-five thousand dollars, has been obtained and cancelled.

Since the date of the last annual report, the Lehigh and Susquehanna Railroad has been opened from Easton to Wilkesbarre, and a daily passenger train is now run, in connection with one of the trains of this company, between Philadelphia and Wilkesbarre and Scranton.

The Lehigh Valley Railroad Company have also extended their road from Wilkesbarre to Tunkhannock, and are now carrying passengers and freight, in connection with this company, from Philadelphia through to that point without change of cars. The whole line, froum Tunkhannock to the New York State line, is being pushed forward with great vigor. and will be opened through during the coming summer; when completed it will open a new route *via* North Pennsylvania Railroad and the Lehigh Valley Railroad, between Philadelphia and Northern Pennsylvanio and State of New York, considerably shorter in distance than the lines now in use. The opening and extension of these roads cannot but add to the business of this company, and will require additional outlays for its accommodation.

The company have 26 locomotives. Miles run with passenger trains, 240,079; with freight trains, 181,185—total, 421,264. Number of passengers carried, 746,911; do., carried one mile, 18,873,-

292, equal to 247,664 through passengers. Tons of freight moved one mile, 18,172,078.

Iron Manufacture in Pennsylvania.

Pennsylvania owes her pre-eminence in the manufacture of iron and steel, less to her supply of iron ores than to her vast beds of good coal and that indomitable pluck and energy which her people have exhibited in the development of the resources with which nature has endowed her. Several other States are well supplied with ore. New Jersey, Northern New York, Upper Michigan and Missouri abundantly so. Virginia is rich in ore and coal, and at no very distant day her mountains and vales will be illuminated by forge and furnace fires, and re-echo with the steam whistle and ponderous hammer. To the iron and coal fields of Alabama, the attention of Northern capitalists has recently been directed, and many believe that iron can be manufactured in that State as cheaply and of as good quality as anywhere else in the country. But despite the great mineral resources of other States, Pennsylvania stands pre-eminent as an iron producing State, one-half of the total make of the country being produced here. It is exceedingly interesting to follow the progress of this great industry in this State from its birth to its present gigantic proportions. For many years ore was smelted entirely with charcoal. From the best sources of information we are led to believe that the first furnace was erected in the year 1715. Between that time and the breaking out of the Revolutionary War, seven furnaces were erected. These furnaces were small and made but little iron, and the business was by no means profitable. From 1776 to the beginning of the present century twelve additional furnaces were built. From the most authentic records we learn that during the year 1800, fourteen charcoal furnaces were in blast and five were idle. During the following thirty years, forty-nine new furnaces were built and ten abandoned. From 1830 to 1843, sixty-seven charcoal furnaces were built and fourteen abandoned. The beneficial effects of the tariff of 1842 upon the industries of the country now became apparent. In the five years from 1843 to 1847 inclusive, seventy-one charcoal furnaces were erected, an average of more than fourteen per annum in Pennsylvania alone. In 1847 the number of charcoal furnaces in this State reached its maximum, there being at the close of that year, one hundred and seventy in working order. The reduction of the duty upon imported merchandise which took place about this time, palsied this branch of business as it did every other, and large numbers of furnaces blew out; scores of idle stacks standing as monuments attesting the triumph of ignorant legislators. About the year 1854, the scarcity of fuel began to be felt and many furnaces in different parts of the State were blown out. Many a noble forest had been supplanted by well tilled farms. The increasing use of bituminous coal as fuel, and the discovery of oil and consequent scarcity of labor, aided largely in destroying the charcoal iron manufacture in this State. A pretty complete history of this branch of business, and one that is suggestive to the political economist, is presented in the following table, showing the number of charcoal furnaces built and abandoned each year since the inception of the manufacture:

	No. furnaces. built.	ab'd.		No. furnaces. built.	ab'd.
1776 and prev. yrs.	7	0	1847	11	5

1840	3	2	1862	2	0
1841	3	1	1863	2	2
1842	4	0	1864	3	3
1843	8	0	1865	0	1
1844	11	1	1866	1	2
1845	17	1	1867	0	4
1846	24	5	1868	0	0

In 1854 the production of charcoal iron was 116,000 tons; in 1868 it amounted to 59,600 tons. In 1864 the total quantity of ore smelted by the charcoal furnaces of this State was 144,181 tons, yielding 53,171 tons of pig iron, an average of 36.87 per cent. The quantity of flux used was 21,019 tons, of 788 pounds per ton of iron, and of fuel 9,875,918 bushels of charcoal, an average of 185 bushels per ton of iron. The value of the product was $3,562,457.

The smelting of iron by raw bituminous coal is a business of comparatively recent origin here. It is said that David Himrod was the first to employ it in 1845, at his furnace in the Shenango Valley, about two and a half miles east of Clarksville, Mercer County, Pennsylvania. Mr. Himrod was compelled, by a strike of his cokers, either to blow out his furnace or use the coal raw; he determined to try the latter. At first raw coal was mixed with the coke and the furnace worked well. As the supply of coke diminished the quantity of raw coal was increased, until at length the latter was used alone, the furnace working well and producing iron of a good quality.

This discovery has proved of great importance to the bituminous coal and the iron regions of Ohio and Pennsylvania, and, indeed, of the whole West. From that time to the present the number of furnaces using coke and raw coal have greatly increased. The production from 1854 to the present time is given in the following table in tons of 2,000 pounds:

Year.	Tons.	Year.	Tons.
1854	29,941	1862	65,227
1855	23,390	1863	90,719
1856	46,317	1864	122,220
1857	53,083	1865	115,664
1858	33,115	1866	170,600
1859	48,626	1867	191,072
1860	69,748	1868	194,000
1861	79,373		

An analysis of the condition of the raw bituminous coal and coke furnaces of Pennsylvania for 1864, presents the following interesting facts:

Number of furnaces	37
Number using coke	20
Production of coke iron (tons)	77,549
Number using raw coal	11
Production of raw coal iron (tons)	44,671
Total quantity of ore used (tons)	273,967
Quantity of hematite ore used (tons)	75,826
Quantity of calcareous ore used (tons)	144,798
Quantity of other ores and cinder used (tons)	53,343
Average yield in furnace (per cent.)	42
Quantity of flux consumed (tons)	57,081
Quantity of coal consumed (tons)	357,814
Quantity used raw (tons)	102,230
Quantity coked (tons)	255,584
Average quantity per ton of iron (tons)	2.92
Value of product at Pittsburg	$6,722,100

But it is her anthracite coal, the best fuel for iron making in the world, that makes Pennsylvania a great iron State. Of the 925,000 tons of pig iron made in this State last year, 672,000 tons, or about 73 per cent., was anthracite iron. This immense trade has sprung up since the year 1837, when the first anthracite furnace was built. The following statement exhibits the progress of the manufacture since 1854:

Year.	Number of furnaces in blast.	Production. (Tons of 2,000 lbs.
1854	70	262,747
1855	79	283,836
1856	81	347,195
1857	66	307,199
1858	61	280,685
1859	64	364,487
1860	69	403,694
1861	65	314,271
1862	68	370,304
1863	79	432,062
1864	90	519,690
1865	85	376,969
1866	..	573,759
1867	..	594,270
1868	..	671,955

The number of anthracite furnaces annually erected from the year 1837 to 1865, inclusive, is exhibited in the following statement:

	No. furnaces built.		No. furnaces built.
1837	1	1852	1
1838	0	1853	10
1839	3	1854	14
1840	2	1855	9
1841	0	1856	6
1842	2	1857	2
1843	1	1858	0
1844	5	1859	1
1845	10	1860	1
1846	8	1861	1
1847	6	1862	2
1848	5	1863	2
1849	1	1864	4
1850	7	1865	1
1851	1		

Since 1865, a large number of new furnaces have been built, chiefly in the valley of the Lehigh, and the manufacture is now quite prosperous.

To produce the 672,000 tons of anthracite iron made in Pennsylvania in 1868, 1,512,000 tons of coal were consumed, and 1,550,000 tons of ore smelted.

We have now given a pretty full and correct history of the pig iron manufacture of Pennsyl-

vania, and we now propose to follow the crude pig into the finished rail, bar, band, hoop, sheet, &c. This brings us to the rolling mills and forges. The first rolling mill of which we have any record was built in the year 1790. Prior to the Revolutionary War a few bars and rods were made here by small forges and smithies, but the manufacture was discouraged and finally prohibited by the mother country, who with characteristic selfishness desired to manufacture iron for the world, although the making of crude iron, for shipment to England, was rather encouraged. The following table shows the date of erection and number of mills built from 1790 to 1865, inclusive:

Year.	No.	Year.	No.	Year.	No.
1790	1	1838	1	1853	1
1795	1	1839	1	1854	3
1810	1	1840	7	1855	1
1820	1	1841	1	1856	3
1824	1	1842	3	1857	8
1825	2	1843	1	1858	1
1826	2	1844	3	1859	0
1827	1	1845	5	1860	1
1828	2	1846	9	1861	0
1830	3	1847	2	1862	8
1831	3	1848	4	1863	5
1832	1	1849	3	1864	13
1834	1	1850	4	1865	2
1836	2	1851	1		
1837	3	1852	3		

Thirteen (13) of these mills were abandoned prior to 1865.

The production of all kinds of rolled iron, annually, during the past fifteen years in this State, has been as follows:

No. Tons.	No. Tons.	No. Tons.
1854..179,567	1859.237,058	1864.408,800
1855..217,784	1860.248,675	1865.390,436
1856..250,188	1861.218,874	1866.456,707
1857..219,958	1862.264,073	1867.490,081
1858..219,320	1863.337,499	*1868.520,000

* Partly estimated.

The product of railroad iron, included in the above, for the past three years, was as follows: 1866, 212,786 tons; 1867, 245,081 tons; 1868, 276,500 tons.

In order to show the relative importance of Pennsylvania as an iron State, we submit a statement of the quantities and kinds of rolled iron, other than railroad iron manufactured in 1866, in Pennsylvania and in all the other States:

	Pennsylvania. Tons.	All other States. Tons.	Total. Tons.
Merchant bar and rod	118,013	158,179	276,192
Sheet	22,035	11,934	33,969
Plate	35,006	36,501	71,507
Hoop	11,595	4,864	16,459
Nails and spikes	47,332	100,293	147,625
Axles and other iron	9,940	39,619	49,559
Total	243,921	351,390	595,311

In 1868 the rolling mills of the State consumed 1,210,000 tons of coal, of which 380,000 tons was anthracite, and 830,000 tons bituminous.

There are seventy forges in the State, which produce annually about 35,000 tons of blooms, bars, axles and other forgings. The history of this branch of manufacture shows that it has not been of late years a progressive one. The production since 1854, has been as follows:

Tons.	Tons.	Tons.
1854...34,802	1859..25,708	1864..34,911
1855...33,485	1860..25 519	1865..35 578
1856...35,348	1861..23,835	1866..31,330
1857...32,223	1862..26,610	1867..31,747
1858...24,894	1863..31,203	1868..30,520

In the manufacture of steel, Pennsylvania is equally as prominent as in the manufacture of iron. More than one-half of the steel made in the country is made here. The great steel works of Pittsburg turn out nearly 10,000 tons of steel per annum, which in regard to quality cannot be surpassed by the best productions of any foreign country. Two large establishments for the manufacture of Bessemer steel are now in operation—one at Harrisburg and one at Lewistown—and metal of an excellent quality is being produced.

Such is Pennsylvania as an iron and steel State. We are proud of her, and have taken some trouble to let the country know what she is. We predict for her a brilliant future. Some other sections of the country will undoubtedly increase their iron production largely. It may be that the anthracite coal of Pennsylvania will ere long be carried, in much larger quantities than heretofore, to points along the Hudson River to smelt the iron ores of Northern New York. But Pennsylvania can and will maintain her supremacy.

Journal of Railroad Law.

RAILROAD COMPANIES—FAILURE TO MAINTAIN FENCES—WHEN LIABLE THEREFOR.

The late action of Brown *vs.* The Milwaukee and Prairie du Chien Railway Company (21 Wis., 39,) was one for injuries done to plaintiff's horses by a train on defendant's road, to which they escaped from an adjoining field. The only question of fact at issue was, whether the escape was caused by defendant's failing to maintain in proper condition a certain set of bars in a fence between the track and land belonging to one Oleson. It appeared from the evidence that the fence and bars were of the full height required by law; that the accident happened in the night of August 6th, that the next morning a cleat or batten, which had been nailed to the post at one end of the bars, and by which they had been confined in place, was lying upon the ground, and the bars (none of which were broken,) were down at that end; that the cleat had been nailed to the post with eight 12-penny nails about the middle of the preceding May; that when in its place it projected above the post; that after the accident the upper end of it looked as if it had been pounded by a stone, and there was a stone lying near by, of the weight of four of five pounds; and that several of the nails had remained in the post their heads being drawn through the batten. It further appeared that the horses had been pastured a short time before in an enclosure on the opposite side of the road, and that there was a field belonging to Oleson adjoining that enclosure, and separated from it by a fence. Oleson, for the plaintiff, testified: "these horses had been in my field a couple of times; once the white horse jumped over my fence, which was a good rail fence about four feet high; and once he pushed it down and they all got in. I spoke to Brown, and after that I saw the white horse tied down, and then he did not get in."

The same witness stated that he "had not been at the bars for some time before the accident—probably two months before." The defendant objected to the witness testifying as to the condition of the bars at that time; but the objection was overruled, and he said that "the nails were getting out a good many times;" that "the batten was loose at the time," and that it "had been used a good many times," &c. There was evidence for the plaintiff tending to show that the upper bar was so short as to be easily sprung out of its place. It appeared that after the horses were put into the field from which they escaped, the white horse above mentioned was not tied down. The defendant's evidence tended to show that the bars were in a good condition.

The opinion of the Court was delivered by

DIXON, C. J.—The defendant's counsel seem to misapprehend the decision in Hance *vs.* Cayuga and Susquehanna Railroad Company, 26 N. Y., 428. The Court did not decide that the absolute liability under the statute ceased when the fences had once been erected. The N. Y. statute, like our own, provides that when such fences shall be duly made and maintained, the railroad company, or other party having control of the road, shall not be liable for any such damages, unless willfully and negligently done. Laws of 1860, chap., 268. The turning point in that case was, not that the company had neglected to build and maintain sufficient fences and cattle guards, for it appears that it had done both, but that it had been guilty of negligence in another respect not within the statute; that is, in not removing the snow from underneath the cattle guard. In such case the negligence of the plaintiff may very properly have been taken into account in determining whether he was entitled to recover, but it does not show that the same rule is to prevail when the injury arises through a defect of fences which have once been erected. The statutory liability is absolute, and continues unless the fences are maintained as well as erected. This disposes of the second instruction asked by the defendant and refused by the Court, the Court having already correctly instructed the jury as to the duty of the company in keeping up its fences, and that being the only question at issue.

There was also another reason for refusing the instruction. There was no sufficient evidence that the white horse was breachy. It did not appear that he was accustomed to or ever had jumped or pushed down a lawful fence. Mr. Oleson's fence was only "about four feet high." An animal that would jump or push down such a fence might never attempt the same thing with one of the requisite statutory height and strength.

The first instruction asked by the defendant and refused in form, though given with a slight modification by the Court, is not the subject of complaint here. It seems to have been as favorable to the defendant as the circumstances of the case required.

The testimony of the witness Oleson was admissable for the purpose of showing the negligence of the company in not repairing the fence—that its defective condition was or ought to have been known to the agents and employees of the company. If the fence should be suddenly destroyed by some accident against which it is impossible for the company to provide, it may be that it would not be subject to the absolute liability of the statute, if immediate steps were taken to rebuild. The jury were instructed that the company, in keeping up the fence, were only bound by that ordinary care and diligence observed between other adjoining landowners. At all events the jury could not have been misled by the testimony as they must have understood that it was the defective condition of the fence at the time of the injury for which the company were responsible.

Another objection is, that the verdict is unsupported by evidence. We cannot agree with the counsel in this. There clearly was some evidence to sustain the verdict.

By the Court.—Judgment affirmed.
